

BOHLE TRANSMITTER STATION, QUEENSLAND

Base Address	Bohle, QLD
Base Age	1940's
Region	North Queensland
Date of Last Data Review	December 2012

Description

The Bohle Transmitter Station site is a site of approximately 484 hectares, located 10 kilometres west of Townsville. The station is a communications facility used by Defence and forms part of the Modernised High Frequency Communications System, which includes a network of other similar sites around Australia.

Base Activities

Base activities are benign in terms of potentially contaminating activities; however there are three above ground diesel storage tanks located around the building compound.

Contamination Information

Known Contamination

No known contamination issues exist at the site.

Risk Assessment Rating

No identifiable risks have been found in environmental assessment works completed at the base.

Current Status

A Stage 1 Desktop assessment has been completed for the site. Stage 2 intrusive investigations to assess the quality of soil and groundwater around the above ground storage tanks has been recommended, but has not yet been completed.

Other Information

Two reports relating to the environmental condition at the site have been completed in 2005 and 2011. For further details relating to these documents, contact Department of Defence at ncrp@defence.gov.au.
