Executive Summary

Introduction

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Defence, 2020) for monitoring of select per- and poly-fluoroalkyl substances (PFAS) at Lavarack Barracks (the 'Base'), located in Townsville, Queensland.

This Ongoing Monitoring Interpretive Report summarises the results of the monitoring undertaken over the period between October 2020 and March 2023. The scheduled sampling events were completed in October 2020, March - April 2021, August 2021, February - April 2022, August - October 2022 and March 2023. This report provides interpretation of changes that have occurred during the reporting period.

This Ongoing Monitoring Interpretive Report has been prepared in general accordance with the Defence *PFAS OMP Annual Interpretive Report Guidance* (Version 0.4) issued in October 2022 (Defence, 2022).

Objective

The objective of the monitoring program set out in the OMP is to provide information on changes in the location and concentrations of PFAS on-base and off-base within the Management Area as shown by the orange outline on **Figure F1** in **Appendix A**.

The data is required to assist risk management decisions by Defence and State Government agencies to protect human health and the environment.

Monitoring Program

AECOM completed biannual monitoring (targeting wet and dry seasons) of groundwater, surface water and sediment between October 2020 and March 2023 in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2023b). The monitoring targeted PFAS, namely perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA) and perfluorohexane sulfonate (PFHxS) and included selected locations within the Management Area.

Interpretive Assessment

Data collected during the monitoring period were compared to historical data for the included sampling locations.

PFAS concentrations in groundwater are relatively stable and within the same order of magnitude with the exception of some locations associated with known on-base PFAS source areas. An off-base well recorded an isolated spike in August 2021, but subsequent sampling events are with the same order of magnitude as historical results. Overall, the nature and extent of PFAS in groundwater has not changed from the understanding presented in previous investigation reports (RPS and Wood 2019a, 2019b; and 2019c; 2020a and 2020b) and the PMAP (Defence, 2020).

PFAS concentrations in surface water are generally stable with the exception of some locations associated with known on-base PFAS source areas. Off-base surface water monitoring locations reported some new historical maximums and exceedances of the adopted human health recreational water and ecological guideline values. These locations are within areas which have historically exceeded adopted guideline values, except at location SW220. The isolated new exceedance of the adopted human health recreational water guideline at SW220, in August 2022, for sum of PFOS and PFHxS is inconsistent with historical results off-base, however the results were within the same order of magnitude as previous results at this location.

What is an 'order of magnitude'?

This refers to something decreasing or increasing by multiples of ten. For instance, an increase from 10 to 100 is an order of magnitude increase. When assessing changes in PFAS concentrations at an individual location, all concentrations are considered when determining trends, but order of magnitude changes are discussed separately as they represent a significant change in concentrations from what was reported in the previous event.

If a change is close to established health or environmental criteria, it will also be considered significant.

Concentrations were reported below the adopted human health recreational water guideline and within the historical range of results for this location in March 2023 and therefore this isolated exceedance was not sustained over the monitoring period. Downstream sampling locations did not exceed the adopted human health recreational water guideline.

Sediment sample results were generally reported within historical ranges with the exception new historical maximum concentrations at some locations. The new historical maximum concentrations reported were either detected within one order of magnitude, or at concentrations close to previous maximum concentrations.

Conceptual Site Model and Risk Profile

The conceptual site model was reviewed, and no changes were identified to source, pathways or receptors within the Management Area.

The data collected during the OMP over the monitoring period suggest that the risk profile to human health and ecological receptors within the Management Area is unchanged, based on the following conclusions of the data assessment:

- Groundwater PFAS concentrations are relatively stable.
- The overall PFAS plume extent has not changed significantly compared to historical results.
- Despite new maximums and first-time detects, the inferred PFAS transport mechanisms (of overland flow, leaching to groundwater and groundwater/surface water interaction) and the groundwater, surface water and sediment concentrations are generally similar to those reported in (RPS and Wood, 2019a), (RPS and Wood, 2019b) and (RPS and Wood, 2020a). Some localised increases were noted which are inconsistent with the CSM, at MW131 (located in a source area on-base) and MW123I (located on the base boundary) which reported new maximum concentrations. Off-base well MW235S reported a new exceedance of adopted drinking water guidelines for PFOS+PFHxS that was isolated to a single event in August 2021. Subsequent results were below this guideline. MW235S is not used for drinking water. Groundwater is not extracted or used on-base so there is no new exposure pathway at MW131. MW123I and MW235S are within the plume extent previously considered for the CSM and the downgradient off-base well MW236S has consistently reported exceedances of the drinking water guidelines. No new exposure pathways for groundwater were identified.
- PFAS concentrations in surface water bodies were generally consistent with historical results with some locations off-base (at Gordon Creek) and on-base which reported an isolated new exceedance of the adopted human health recreational water guideline for PFOS+PFHxS concentrations. Off-base surface water locations have historically not exceeded this guideline in Gordon Creek, although given the exceedance was isolated in August 2022 and concentrations were below the guideline for the subsequent event, the risk profile is considered unchanged. Due to the condition of Gordon Creek (i.e., a swampy area and located next to the main road), it is not considered suitable for recreational purposes such as swimming and fishing. Continued monitoring is required to assess if this exposure pathway is complete and to confirm if the reported exceedances are sustained over both wet and dry seasonal conditions. Human health and ecological receptors in the Ross River and associated tributaries were identified in the CSM and the exposure pathways associated with these receptors remain the same and precautionary advice (and the associated signage) for consumption of fish from Idalia Lakes remains in place.
- Sediment concentrations have remained stable and consistent with historical results of the respective sub-catchment area either on-base or off-base.

Conclusions

The monitoring conducted over the period covered within this report is considered to have met the objectives of the SAQP (AECOM, 2023b) and the overall OMP (Defence, 2020). The monitoring network (being locations of combined sediment and surface water and groundwater wells) is considered generally appropriate and sufficient for the program objectives.

The CSM was reviewed, and no changes were identified to the sources, pathways or receptors at the base and within the Management Area.

Based on the data reviewed, there were no changes to the risk profile, and there are no triggers to review the ongoing monitoring program. Based on the data, AECOM considers that the conclusions made in the HHRA (RPS and Wood, 2019a) and ERA (RPS and Wood, 2020a) still apply.

Ongoing monitoring as part of the OMP for groundwater, surface water and sediment will continue to monitor the extent of PFAS, potential migration and any associated risk changes in accordance with the SAQP.

1.0 Introduction

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) as outlined in the PFAS Management Area Plan (PMAP) (Defence, 2020) at Lavarack Barracks, Townsville (the 'Base').

The monitoring targeted PFAS in a range of environmental media (being sediment, surface water and groundwater) at selected locations on-base and in surrounding off-base areas, including the Management Area as outlined in the PMAP (Defence, 2020) and as depicted on **Figure F1**, in **Appendix A**.

To meet the objectives of the OMP, the monitoring was undertaken in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2023b). The SAQP was reviewed and updated as required, prior to each monitoring event.

This Ongoing Monitoring Interpretive Report has been prepared in general accordance with the Defence (2022) *PFAS OMP Annual Interpretive Report Guidance* (Version 0.4) issued in October 2022 (Defence, 2022). The report summarises the results of the monitoring completed in the monitoring period from October 2020 to March 2023 (hereafter referred to as "the monitoring period").

1.1 Purpose and Objectives

The objective of the monitoring program set out in the OMP is to continue to assess changes in the nature and extent of PFAS within the environment, where Defence's historical use of legacy Aqueous Film Forming Foam (AFFF) has led to a potentially elevated risk to a receptor, or potential future risk to a receptor within the Management Area.

Assessing changes in the distribution, concentration, and transport (pathways) of the contaminants against appropriate guideline values provides:

- An evidence-based approach for targeted and effective risk management decision making to protect human health and environmental receptors.
- An early warning indication that additional management of PFAS contamination may be warranted in areas not currently understood to be affected by PFAS.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP (Defence, 2020), Human Health Risk Assessment (HHRA) (RPS and Wood, 2019a) or Ecological Risk Assessment (ERA) (RPS and Wood, 2020a), as required.

1.2 Scope

The scope of works for this Ongoing Monitoring Interpretive Report is to assess changes to the nature and extent of select PFAS over the monitoring period and evaluate if these changes have implications for the understanding of the Conceptual Site Model (CSM) and the risk profile with respect to PFAS impacts within the Management Area.

This included the evaluation of data reported during the current monitoring period in the following biannual reports, which are included in **Appendix B**:

- *Sampling Event Factual Report, October 2020. PFAS OMP – Lavarack Barracks, Townsville, Queensland* (AECOM, 2021a).
- *Sampling Event Factual Report, March/April 2021. PFAS Ongoing Monitoring Program – Lavarack Barracks, Townsville, Queensland* (AECOM, 2021b).
- *Sampling Event Factual Report, March/April 2021. PFAS Ongoing Monitoring Program – Lavarack Barracks, Townsville, Queensland* (AECOM, 2021c).
- *Wet Season Sampling Factual Report, February to April 2022. PFAS OMP - Lavarack Barracks Townsville* (AECOM, 2022).

- *Dry Season Sampling Factual Report, August to October 2022. PFAS OMP - Lavarack Barracks Townsville (AECOM, 2023c).*
- *Wet Season Sampling Factual Report, March 2023. PFAS OMP - Lavarack Barracks Townsville (AECOM, 2023d).*

AECOM also compared data presented in this report to the data presented in the previous investigation reports (RPS and Wood 2019a, 2019b; and 2019c; 2020a and 2020b).

2.0 Site Setting

2.1 Site Description

The following summarises the base identification and setting presented in the PMAP (Defence, 2020) with updated information, where relevant.

Table 1 Site Identification and Setting Summary

Element	Description
Base ID	0229
Location	The base is located in Murray, a suburb of Townsville, Queensland. The base is located within the Townsville City Council local government area. Entry to the base is from University Road (Bruce Highway), Murray, approximately 7 km from Townsville City, as shown in Figure F1 in Appendix A .
Regional Climate (Refer to Section 6.3 for further details)	The regional climate of Townsville is classified as tropical; however, rainfall is typically lower than other locations on the coast of North Queensland. The wet season, from approximately November to April, is associated with hot and humid conditions with periods of heavy rain. The dry season is associated with dry, warm days and cool nights from approximately May to October.
Topography, geology and hydrogeology	<p>The topography of the Management Area is characterised by a hillslope profile descending from the Mount Stuart massif (located to the south of the base) towards the Ross River floodplain terraces (located to the north of the base). The topography of the developed areas of the base ranges from 10 - 15 m relative to the Australian Height Datum (AHD) to approximately 45 m AHD at the foot of Mount Stuart to the south-west. Elevations decrease from approximately 12 m AHD at the northern boundary of the base to approximately 5 m AHD at the Ross River.</p> <p>The Management Area is characterised by coastal floodplain sediments and colluvial hillslope soils over igneous granitic bedrock.</p> <p>The Detailed Site Investigation (DSI) by RPS and Wood identified there to be five main hydrogeological units on Base and in areas downgradient in off-base areas to the north; quaternary coastal floodplain alluvium, quaternary colluvium and upper headwaters alluvium, quaternary river alluvium, conglomerate bedrock and granite bedrock. A shallow aquifer is present within the unconsolidated quaternary age sediments (alluvium and colluvium) and a deeper aquifer within the bedrock (conglomerate and granite) (RPS and Wood, 2019b).</p> <p>Shallow groundwater off-base, in the Ross River floodplain, is present within the alluvial sediments and likely recharged by the network of inflowing freshwater tributaries, direct infiltration from rainfall in the catchment and baseflow from rainfall on the surrounding granitic outcrop and associated colluvium (Defence, 2020).</p>
Management Area Drainage	<p>The Management Area is located within the Ross River Basin which ultimately discharges into the Great Barrier Reef in the Coral Sea. Surface water drainage within the Management Area is comprised of several tributary sub-catchments which typically originate from the Mount Stuart massif and flow through the base and into the residential areas of Annandale and Idalia to the north and northeast within the off-base Management Area.</p> <p>The base has three main creek catchments and eight minor drainage channels which have been grouped as follows:</p> <ul style="list-style-type: none"> • A and West sub-catchment • G and Central sub-catchment

Element	Description
	<ul style="list-style-type: none"> J/K and East sub-catchment <p>These sub-catchments are shown on Figure F1 in Appendix A. The off-base Management Area contains relatively minor drainage features which are dry for much of the year, holding standing water only during and immediately after precipitation events.</p> <p>A single drainage feature from the western boundary of the base, within sub-catchment A, discharges to the Ross River upstream of Aplin's Weir, where the river is considered fresh water. The remainder of the drainage features discharge into the estuarine section of the Ross River and Idalia Lakes which are tidally influenced, saline and considered marine.</p>
Vegetation	<p>Most of the vegetation at the base has been modified or cleared. Natural vegetation occurring at the fringe of the base's development is dominated by Queensland Government mapped Least Concern Regional Ecosystems:</p> <ul style="list-style-type: none"> Poplar Gum (<i>Eucalyptus platyphylla</i>) and Clarkson's Bloodwood (<i>Corymbia clarksoniana</i>) woodlands on alluvial plains. Narrow-leaved Ironbark (<i>Eucalyptus crebra</i>) and Dallachy's Gum (<i>Corymbia dallachiana</i>) woodlands on alluvial plains. <p>Riparian and wetland vegetation dissect the Base and comprise primarily weed species including:</p> <ul style="list-style-type: none"> Rubber vine (<i>Cryptostegia grandiflora</i>) Lantana (<i>Lantana camara</i>) Chinee Apple (<i>Ziziphus Mauritania</i>) Leucaena (<i>Leucaena leucocephala</i>) Para Grass (<i>Urochloa mutica</i>) <p>A range of vulnerable species are known to occur across the Mount Stuart Training Area, south of the Base. However, these are located upgradient to the Management Area.</p>
Current and previous land use (including AFFF use)	<p>The base covers an area of 740 hectares and is a large working, training and accommodation facility. Activities carried out at the base are mainly related to general Defence training activities, and vehicle/equipment maintenance works. The base facilities include a current and Former Fire Station, a current and former firefighting training area, numerous vehicle and engineering workshops and current and former bulk fuel area/oil storage and distribution facilities.</p> <p>PFAS was a component of legacy AFFF used at the base which contained perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA) as active ingredients. Defence have phased out the use of legacy AFFF and replaced it with the use of Ansulite foam which does not contain PFOS or PFOA as active ingredients, although these compounds are still present in trace amounts. Ansulite is used by Defence only in emergency situations where human life is at risk, or in controlled environments to test equipment.</p> <p>Previous environmental investigations (RPS and Wood 2019a, 2019b, 2019c, 2020a and 2020b) have identified that soil, sediment, surface water and groundwater on- and off-base have been impacted by PFAS.</p> <p>No off-base PFAS sources have been identified, in addition to those previously identified in the DSI, which may be contributing to contamination within the Management Area.</p>

Element	Description
	Further information about infrastructure projects which have occurred at the base prior to and during the monitoring period are presented in Section 6.2 .
Land uses surrounding the base	The surrounding area comprises the residential suburbs of Annandale to the north of the base, Idalia and Oonoonba to the northeast and Wulguru to the east. Townsville Hospital, Tec-NQ and James Cook University are located to the west of the base and the Mount Stuart Training Area, which is used by Defence, is located to the south of the base.

2.2 Management Area

The Management Area is divided into ‘on-base’ and ‘off-base’ areas and comprises 2,365 hectares. The Management Area boundary is formed to the north by the Ross River, relevant sub-catchment boundaries to the east and west and Mount Stuart to the south. The Management Area includes the residential suburbs of Murray, Douglas, Annandale, Idalia, Oonoonba and Wulguru (Defence, 2020). The Management Area is shown on **Figure F1 (Appendix A)**.

2.3 Source Areas

The PMAP (Defence, 2020) identifies the following locations as PFAS source areas (refer to **Figure F1, Appendix A**):

- Former Fire Station
- Former Fire Training Area and Monocell
- Former Helicopter Squadron
- Suspected AFFF Disposal Area
- Soil Stockpile Area 1
- Eastern PFAS Contamination Area
- Former B Squadron
- Stockpile Designated Area 2.

The following secondary source areas have been identified:

- Lavarack Golf Course and Sporting Fields
- Top, Middle and Lower Dams.

2.4 Groundwater – Historical PFAS Data

The DSI (RPS and Wood, 2019b) reported that there were diffuse PFAS impacts in groundwater across the base with highest concentrations historically recorded at the following source areas: Former Fire Station, Monocell, the Eastern PFAS Contamination Area and the Former Fire Training Area.

PFAS were detected in groundwater in the off-base Management Area at lower concentrations. The PMAP (Defence, 2020) states that based on the distribution of PFAS in groundwater, infiltration of PFAS from surface water drainage channels to groundwater may be the primary migration pathway for PFAS to off-base groundwater aquifers.

2.5 Surface Water – Historical PFAS Data

Prior to the OMP, the DSI (RPS and Wood, 2019b) reported that PFAS were detected in surface water samples collected from all sub-catchments on-base and within off-base drainage channels with some locations exceeding the ecological criteria for freshwater and marine water (95% species protection values).

In samples collected from one location in the Ross River, upgradient of Blacks Weir (constituting Townsville's emergency water supply) and Lavarack Barracks management area, concentrations were reported below the adopted human health (drinking water) criteria. The source of the PFAS concentrations at this location is not outlined in the DSI, and has not been further assessed.

3.0 Sampling and Analytical Methodology

3.1 Sampling and Analysis Methodology

The SAQP (AECOM, 2023b) included in **Appendix D** outlined the proposed schedule and rationale for the sampling of six-monthly groundwater, surface water and sediment sampling on and off-base. This involved:

- Dry season sampling event in October 2020
- Wet season sampling event in March/April 2021
- Dry season sampling event in August 2021
- Wet season sampling event in February – April 2022
- Dry season sampling event in August – October 2022
- Wet season sampling event in March 2023.

The scope of the sampling is consistent between the dry season and wet season sampling events. The list of groundwater monitoring wells, surface water and sediment locations sampled during each of the above events, the rationale for sample location selection and the sample collection methodology is summarised in the SAQP (AECOM, 2023b).

3.2 Summary of OMP Works

A summary of the monitoring works implemented as part of the SAQP (AECOM, 2023b) for the monitoring period between October 2020 and March 2023 are presented in the Table 2. **Section 3.3** summarises deviations from the SAQP (AECOM, 2023b).

Table 2 Summary of Monitoring (October 2020 to March 2023)

Monitoring Event (Sampling dates)	Samples Collected	Analysis
October 2020 Biannual Sampling Event (AECOM, 2021a)	40 GW samples 19 SW samples 29 SD samples	PFAS extended suite
March/April 2021 Biannual Sampling Event (AECOM, 2021b)	40 GW samples 30 SW samples 31 SD samples	PFAS extended suite
August 2021 Biannual Sampling Event (AECOM, 2021c)	40 GW samples 20 SW samples 30 SD samples	PFAS extended suite
February – April 2022 Biannual Sampling Event (AECOM, 2022)	39 GW samples 31 SW samples 31 SD samples	PFAS extended suite
August – October 2022 Biannual Sampling Event (AECOM, 2023c)	38 GW samples 21 SW samples 31 SD samples	PFAS extended suite
March 2023 Biannual Sampling Event (AECOM, 2023d)	38 GW samples 31 SW samples 31 SD samples	PFAS extended suite

Notes: SW = surface water; GW = groundwater, SD = sediment

3.3 Deviations from SAQP Requirements

Deviations from the scope outlined in the SAQP as applicable to the monitoring period are summarised in **Table 3**.

Table 3 Deviations from SAQP

SAQP Requirement	Sampling Event Deviation	Impact of deviation on data set
October 2020 Biannual Sampling Event (AECOM, 2021a)		
Collection of surface water at SW150	Surface water sample location SW150 described in the OMP as being from a tap, could not be located and an appropriate location for sampling was unable to be identified.	Minor – No data available at this location for dry season 2020.
Co-located surface water and sediment samples were scheduled to be collected from SD/SW211 and SD/SW212.	During the sampling event it was identified that SD211/SW211 and SW212/SD212 are located on private property. Results from these locations were not included in the factual report and consent for the sampling was sought for subsequent events.	Nil
Collection of surface water at SW109, SW110, SW120, SW126, SW128, SW129, SW130, SW133, SW136, SW137	These locations were dry during the sampling event and samples of surface water were unable to be collected.	Minor – No data available at these locations for dry season 2020. The data set is considered representative of the conditions within the Management Area being monitored.
The water quality meter will be calibrated each day prior to the commencement of field activities.	The SAQP states the water quality meter is to be calibrated each day prior to the commencement to field activities. During this sampling event, the water quality meter was calibrated at the end of each day of sampling in preparation for the following day.	Nil. The water quality meter calibration demonstrated that the calibration was not affected by the timing of the calibration.
March/April 2021 Biannual Sampling Event (AECOM, 2021b)		
Collection of surface water at SW133	No surface water was available and as such the sample was not collected.	Minor – No data available at this location for wet season 2021. The data set is considered representative of the conditions within the Management Area being monitored.
Co-located surface water and sediment samples at SW137/SD137	Sampling location SW137/SD137 was replaced by location SW144/SD144 as SW144/SD144 is the intended sampling location in the PMAP (Defence, 2020).	Nil
Collection of duplicate and triplicate samples at a rate of one in ten primary samples for sediment.	The SAQP states the duplicate and triplicate samples are to be collected at a rate of 10% being one in ten primary samples. A total of 31 primary samples were analysed with three out of the required four pairs of the	Minor - The actual rate of 9.6% is marginally lower than the target rate of 10%, AECOM considers this difference to be negligible and that the data is sufficient for the purposes of the ongoing monitoring program.

SAQP Requirement	Sampling Event Deviation	Impact of deviation on data set
	duplicate and triplicate samples analysed for an actual rate of 9.6%.	
Collection of rinsate samples at a rate of one per day of sampling.	One rinsate blank sample collected on 29 March 2021 returned detections of PFOS and (PFHxS). Two surface water samples (SW135 and SW139) were re-sampled on 22 June 2021 due to the risk of cross contamination of surface water samples collected on 29 March 2021.	Nil
August 2021 Biannual Sampling Event (AECOM, 2021c)		
Collection of surface water at SW109, SW110, SW129, SW130, SW113, SW120, SW126, SW128, SW132, SW133, SW136	No surface water was available and as such the samples were not collected.	Minor – No data available at these locations for dry season 2021. The data set is considered representative of the conditions within the Management Area being monitored.
Collection of sediment at SD132	High proportion of large cobbles and no sediment and as such no sediment sample was collected.	Nil. The data set is considered representative of the conditions within the Management Area being monitored.
February – April 2022 Biannual Sampling Event (AECOM, 2022)		
Collection of surface water at SW120, SW126, SW128, SW129, SW130, SW133, SW134	No surface water was present at the time of the initial sampling round in March 2022 at SW120, SW126, SW128, SW129, SW130, SW133, SW134. Sampling was completed in April 2022, following rainfall when surface water was present.	Nil. Following rainfall, the locations were sampled.
Collection of sediment at SD121, SD132, SD242	No sediment was present in the March 2022 sampling event and was therefore collected following rainfall in April 2022.	Nil – data set is considered representative of broader Base conditions at the time of data collection.
Collection of groundwater samples from MW117S, MW117D, MW118 and MW119 as part of 2022 wet season.	Monitoring wells were accessed for sampling two weeks before the main sampling event as the wells were in a construction zone, and some wells were set to be destroyed during the construction works. MW117S was not sampled as it had already been destroyed. The HydraSleeve™ at MW117D was removed by construction workers prior to destruction and was observed to have a high sediment load.	No data were available from MW117S as the well was destroyed. The results from MW117D were interpreted with caution as sample collection was not completed in accordance with the SAQP.
Collection of additional groundwater sample from MW217.	Laboratory analytical results for the sample collected at MW217 on 3 March 2022 indicated PFAS detections higher than previous results for this location (including 0.06 µg/L 6:2 Fluorotelomer sulfonic acid	Resampling of the well indicated PFOS concentrations were below the limit reporting and consistent with historical results, therefore results for MW217 collected on 3 March 2022 were not verified, not considered representative of

SAQP Requirement	Sampling Event Deviation	Impact of deviation on data set
	(6:2 FTS), 0.02 µg/L PFHxS and 0.08 µg/L PFOS). Resampling in April 2022 confirmed that only PFHxS was present at detectable concentrations (0.01 µg/L).	PFAS concentrations and discarded. The April 2022 result was accepted.
Collection of additional surface water sample at SW110.	Laboratory analytical results for the sample collected at SW110 on 1 March 2022 detected a new maximum PFAS concentration (sum of PFAS 95.6 µg/L). To verify the result, the location was resampled on 26 April 2022.	The results from resampling of SW110 on 26 April 2022 indicated PFAS concentrations were below the initial sampling result on 1 March 2022, and historical results, possibly due to recent rainfall. Therefore, both results from March and April 2022 were accepted as representative of surface water PFAS concentrations at this location in the post wet season event for 2022.
August – October 2022 Biannual Sampling Event (AECOM, 2023c)		
Collection of surface water at SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136	No surface water was present during the dry season sampling event at SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136.	The data set is considered representative of the conditions within the Management Area being monitored.
Gauging and sampling at MW235S.	Depth to groundwater could not be measured at MW235S during the gauging round.	Following clearing of the roots in the well, samples were able to be collected using a decontaminated steel bailer from MW235S and sufficient gauging data was collected across the base to determine groundwater flow direction. No impact on the data set.
Collection of sediment sample from SD120.	Sediment was collected at SD120 in September 2022 after the main sampling event due to access issues during the August sampling round.	The location was able to be accessed and a sample obtained with no impact on the data set.
Collection of additional groundwater sample at MW131. Trip blank and rinsate samples not collected for verification sampling.	Laboratory analytical results for the sample collected at MW131 on 26 August 2022 indicated PFAS detections (sum of PFAS 656 µg/L) an order magnitude higher than historical maximum results. To verify the result, the well was resampled on 7 October 2022.	Resampling of the well indicated PFAS concentrations were closer to the previous historical maximum (pre-August 2022), however were still higher. The October 2022 result was accepted as representative of groundwater PFAS concentrations for the 2022 dry season. Further sampling is required to establish if this is a potential increasing trend at this location. No impact to data set from absence of trip blank and rinsate for verification sampling.
Collection of additional surface water sample at SW110. Trip blank and rinsate samples not collected for verification sampling.	Laboratory analytical results for the sample collected at SW110 on 22 August 2022 detected a new maximum PFAS concentration (sum of PFAS 95.6 µg/L). To verify the	The results from resampling of the location in October 2022 indicated PFAS concentrations within the same order of as the initial sampling result on 22 August 2022 and consistent with historical maximum concentrations.

SAQP Requirement	Sampling Event Deviation	Impact of deviation on data set
	result, the location was resampled on 7 October 2022.	<p>Therefore, both results from August and October 2022 were accepted as representative of surface water PFAS concentrations at this location in the dry season for 2022.</p> <p>No impact to data set from absence of trip blank and rinsate for verification sampling.</p>
March 2023 Biannual Sampling Event (AECOM, 2023d)		
Collection of surface water at SW120 and SW121	<p>SW120 was noted as dry and couldn't be sampled.</p> <p>SW121 couldn't be sampled due to overgrown vegetation preventing access to water.</p>	Minor – No data available at these locations for wet season 2023. The data set is considered representative of the conditions within the Management Area being monitored.

3.4 Changes to the monitoring network

Changes to the monitoring network and well maintenance activities that were undertaken during the monitoring periods are summarised in **Table 4**.

Table 4 Summary of changes to the monitoring network

Sampling Event	Location ID	Action completed
October 2020 Biannual Sampling Event (AECOM, 2021a)	MW003 and MW115	The casing of MW003 and MW115 were bent, however a sample was able to be collected using a HydraSleeve™ without a collar. MW003 was repaired and resurveyed on 16 September 2021.
March/April 2021 Biannual Sampling Event (AECOM, 2021b)	MW121 and MW125	The monument at MW121 is not secured and the plinth at MW125 is cracked. No action taken as sampling is unaffected.
	MW226	Well cap on MW226 identified as missing and was replaced in August 2021.
August 2021 Biannual Sampling Event (AECOM, 2021c)	MW232	Bolts of the gatic cover at MW232 were rusted. New bolts were installed in August 2021.
	MW233	The monument at MW233 is not secured. No action taken as sampling is unaffected.
February – April 2022 Biannual Sampling Event (AECOM, 2022)	MW117S and MW117D	During the April 2022 Sampling Event monitoring well sample locations MW117D and MW117S were damaged by construction works and therefore have been removed from the SAQP (AECOM, 2023b).
	MW003	Cut off well at bend below ground level and install replacement monument. Resurvey well.
	MW121	Repaired concrete plinth to stabilise well.
	MW226	Replaced well cap.
	MW232	Replaced rusted bolts.
	MW233	Ground around concrete plinth reinstated to stabilise well.
August – October 2022 Biannual Sampling Event (AECOM, 2023c)	MW235S	Clearing of the roots within the well using a decontaminated steel bailer.

4.0 Quality Assurance and Quality Control

Data validation pertaining to the data in this report has been previously completed and discussed within the individual factual reports listed in **Section 1.2**.

Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results were representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of the factual and interpretive reports.

5.0 Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP) Version 2.0 [Heads of Environment Protection Authority Australia and New Zealand (HEPA), 2020], Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. At the time of preparing this report, several guidance documents were in circulation in Australia including:

- PFAS NEMP Version 2.0 (HEPA, 2020).
- Department of Health (DoH), 2017. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 (DoH, 2017).
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC, 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999*, Schedule B1, as amended in 2013 (ASC NEPM, 2013).

The adopted PFAS screening criteria to assess the data generated as part of the monitoring are presented in **Table 5** below.

The screening criteria are set out in the OMP as part of the PMAP (Defence, 2020).

Table 5 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment/Reference
Human Health Receptors			
Off-base - Drinking Water	PFOS+PFHxS ¹	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria. as well as one surface water location (SW245) which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS+PFHxS ¹	2 µg/L	The values are from HEPA (2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the HEPA (2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

Note:

¹ Where the guideline values refer to the sum of PFOS and PFHxS, this includes PFOS only, PFHxS only, as well as the sum of the two (HEPA, 2020).

It is noted that at the time this report was prepared no HEPA (2020) endorsed criteria was available for PFAS in sediments.

6.0 Contextual and Ancillary Information

6.1 Remediation Projects

There were no active PFAS remediation projects occurring at the base during the monitoring period (October 2020 – March 2023).

PMAP delivery works commenced at the base in 2021. Soil and groundwater investigation works were conducted at two source areas (the Former Fire Station, and former fire training area and monocell). A mass flux study was also conducted which required the installation of automatic surface water samplers and flow meters at Base boundary sampling locations. The mass flux sampling commenced November 2021 and continued through the 2021/22 wet season and 2022 dry season.

The mass flux study (WSP Golder, 2023) concluded that surface water was the dominant PFAS migration pathway, with the majority (approximately 75%) of off-base PFAS mass discharged from the on-base dams in Catchment G, at the boundary, in the centre of the base. The on-base dams receive surface water input from the former Fire Station, suspected AFFF disposal area, former helicopter squadron and former fire training area. Although only an estimated 15% of the total base wide annual PFAS mass discharge via surface water, Catchment K is likely the primary source of PFAS mass entering Idalia Lakes. Off-base flux of PFAS in groundwater is estimated to contribute up to 6% of the annual PFAS mass discharge for the base.

Recommendations from these works are in the process of being finalised and will be reflected in future updates to the PMAP.

6.2 Infrastructure Projects On-base

Construction of the Land 121 project commenced in 2016 and was completed in late 2019, after the publication of the DSI and prior to the commencement of the ongoing monitoring program sampling event. Civil works and construction included significant alterations and reworking of soils and infrastructure over a large area, on the eastern side of the base, resulting in a potentially large, diffuse source of PFAS. An engineered, covered stockpile was constructed to store PFAS impacted soils resulting from the civil works process and a water treatment system was operated to treat PFAS impacted surface waters generated from the project. The water treatment plant was removed upon completion of the project.

Redevelopment works have occurred at the former B Squadron (an identified source area) as part of the Land 400 project, prior to and during the monitoring period. A building has now been constructed in this area.

Sewer upgrade works were conducted along the eastern boundary and off-base to the northeast commencing in early 2022.

Ground disturbance associated with these redevelopments has the potential to impact the nature and extent of PFAS in this area of the base as follows:

- Overland surface water flow in disturbed areas could result in increased mobilisation of PFAS in surface water which would result in higher concentrations of PFAS in drainage lines in the northeastern corner of the base.
- Any dewatering activities could have a localised impact on groundwater flow and PFAS distribution.

It is noted that Lavarack golf course closed as a recreational area in late 2021 with irrigation of the grass also noted to have been stopped in this area through the 2022 dry season.

6.3 Significant Weather Events

Climatic data for the region is recorded by the Bureau of Meteorology (BOM) at Townsville Aero (Station 032040), located approximately 8 km northwest of the base (BOM, 2023). A graphical representation of monthly rainfall data from the monitoring period compared with mean monthly rainfall for Townsville Area (station 032040) recorded by BOM (2023a) is presented in Plate A.

Generally, below average rainfall was recorded across the wet and dry season events of 2020 to 2021 which included sampling events undertaken in October 2020, March/April 2021, and August 2021. The only month that recorded above average rainfall was August 2021 where the monthly rainfall total of 35.2 mm was above the average of 15.6 mm.

For the 2021/2022 post wet season monitoring event, most of the sampling was undertaken in February 2022 and March 2022 with limited sampling undertaken in April 2022. Through the 2021/2022 wet season from November to April, the monthly rainfall was above average in November 2021, January 2022 and April 2022. Below average rainfall was recorded in December 2021, February and March 2022.

The majority of the 2022 dry season sampling was undertaken in August 2022 with limited sampling in October 2022. Through the 2022 dry season from May to October 2022, the monthly rainfall was generally above the long-term monthly average, with the exception of August 2022 which recorded below average rainfall. The 2022/2023 wet season generally had monthly rainfall totals above the long-term monthly average with the sampling event subsequently being conducted in March 2023 when below average rainfall was recorded.

Plate A Rainfall data from September 2020 to March 2023 compared with mean monthly rainfall for Townsville Aero (station 032040) (BOM, 2023)

Wet weather days (i.e., days with >15 mm of rainfall) were recorded (BOM, 2023) on two days in April 2022, when sampling was completed, as follows:

- 22 April 2022 (95.6 mm rainfall). Samples collected on this day include:
 - Supplementary groundwater sample at MW217 to verify new historical maximum results detected from the initial sample collected for the post wet season event between 28 February and 4 March 2022.
 - Surface water samples at SW120, SW126, SW128, SW129, SW130, SW133 and SW134, collected following rainfall, as no surface water was present during the post-wet season event between 28 February and 4 March 2022.
 - Sediment samples at SD121, SD132 and SD242, as no sediment was present during the post-wet season event between 28 February and 4 March 2022.
- 26 April 2022 (153.2 mm rainfall). Samples collected on this day include:
 - Supplementary surface water sample at SW110 to verify new historical maximum results detected from the initial sample collected for the post-wet season event between 28 February and 4 March 2022.

7.0 Monitoring Data Summary

The following monitoring events were completed by AECOM during the monitoring period:

- October 2020 Sampling event, from 26 October to 3 November 2020 (post dry season).
- March/April 2021 Sampling event, from 26 March and 1 April, and 13 May 2021 (post wet season).
- August 2021 Sampling event, from 16 to 20 August 2021 (post dry season).
- February – April 2022 Sampling event (post wet season), over the period including:
 - 18 February 2022 (prior to the main sampling event due to access restrictions at selected locations);
 - 28 February to 4 March 2022 (main sampling event); and
 - 22 April to 26 April 2022 (verification sampling and MW217 and SW110, as well as surface water and sediment sampling at select locations due to absence of sufficient surface water and sediment at those locations during the main sampling event).
- August – October 2022 Sampling event (post dry season), over the period including:
 - 22 August to 26 August 2022 (main sampling event);
 - 3 September 2022 (due to access restrictions at one sediment location, SD120); and
 - 7 October 2022 (verification sampling at MW131 and SW110)
- March 2023 Sampling event (post wet season) from 6 to 15 March 2023.

The above sampling events were timed to coincide with the end of the wet season and the end of the dry season. Potential seasonal trends and related data are further interpreted in **Section 8.0**.

The results are summarised in the following sections and shown on **Figure F10** to **Figure F45** (**Appendix A**). The results are presented in **Table T1** to **T6** (**Appendix B**).

AECOM has also considered the historic data collected between 2017-2019 as part of the DSI (RPS and Wood, 2019b) and the seasonal monitoring (RPS and Wood, 2019c and 2020b).

The statistical method of Mann-Kendall has not been used to identify trends given the site is located in a tropical area which has a climate of wet and dry seasons. There is insufficient data (i.e., at least eight monitoring event results are required) to allow statistical analysis of corresponding seasons (e.g., post wet season to post wet season).

7.1 Groundwater

7.1.1 Groundwater Elevation and Flow Direction

The standing water level (SWL) was measured in all the sampled monitoring wells to evaluate the groundwater elevations (to m AHD).

Groundwater elevation (GWE) ranges within the monitoring wells gauged over the six monitoring events, in the monitoring period, are summarised below in **Table 6**.

Full records of the gauging data are presented in **Table T1**, **Appendix B** and in each of the respective factual reports provided in **Appendix E**.

Table 6 Summary of Groundwater Elevation

Gauging Event	No. Wells	Min. SWL (m btoc)	Max. SWL (m btoc)	Min. GWE (m AHD)	Max. GWE (m AHD)
October 2020	40	0.565 (MW232)	5.964 (MW072)	0.603 (MW205_S)	23.306 (MW141)
March/April 2021	40	0.491 (MW232)	5.564 (MW235_S)	1.232 (MW205_S)	26.012 (MW141)
August 2021	40	0.6 (MW232)	5.905 (MW205_S)	0.495 (MW205_S)	24.743 (MW141)
February – April 2022	39	0.561 (MW232)	5.373 (MW205S)	1.027 (MW205S)	25.705 (MW141)
August – October 2022	38	0.465 (MW232)	5.824 (MW205S)	0.576 (MW205S)	25.507 (MW141)
March 2023	38	0.270 (MW232)	5.125 (MW205S)	1.275 (MW205S)	25.434 (MW141)

Note: SWL = Standing Water level, GWE = Groundwater Elevation, m AHD = metres Australian Height datum, mbtoc = metres below top of casing.

Groundwater contours and inferred groundwater flow directions in the shallow aquifer (alluvium) are presented **Figure F4 to Figure F9, Appendix A**.

During the monitoring period, seasonal variability observed in groundwater elevation was generally within historical ranges except for the March 2023 monitoring event where most wells recorded new historical maximum groundwater elevations following above average rainfall in January and February 2023.

Surrounding the base, groundwater flow is influenced by Mount Stuart to the south which is the topographic high point. **Figure F4 to Figure F9 in Appendix A** show the inferred groundwater flow direction on Base is north and northeast towards the Ross River floodplain. Following the wet season events, groundwater elevations were generally higher than the dry season at groundwater monitoring locations across the Management Area, however the groundwater flow direction was consistent between post-dry season and post-wet season sampling events.

This is consistent with previous investigations (AECOM, 2023a), RPS and Wood, 2019b, 2019c, 2020a and 2020b) (**Table T1, Appendix B**).

7.1.2 Geochemical Parameters

Groundwater geochemical parameters were measured prior to collecting groundwater samples and are summarised in **Table 7** below. Current and historical field geochemical parameters are presented in **Table T1, Appendix B**.

Table 7 Summary – Groundwater Geochemical Parameters

Sampling Event	Dissolved Oxygen (DO) (mg/L)	Electrical Conductivity (EC) ($\mu\text{S}/\text{cm}$) ¹	pH (pH units)	Corrected Oxidative Reductive Potential (ORP) (mV) ²	Temperature (°C)
October 2020 (Dry Season)					
Minimum	1.44 (MW220S and MW123I)	7.4 (MW236S)	5.50 (MW232)	126.7 (MW205S)	26.2 (MW226)
Maximum	7.93 (MW236S)	51,290.0 (MW232)	7.61 (MW117S)	306.5 (MW125S)	31.0 (MW074)
March / April 2021 (Wet Season)					
Minimum	0.09 (MW101)	516.0 (MW122)	6.08 (MW217)	49.8 (MW018)	26.2 (MW220S)
Maximum	7.26 (MW125I)	42007.0 (MW232)	8.68 (MW102)	394.1 (MW116)	37.0 (MW117D)
August 2021 (Dry Season)					
Minimum	0.42 (MW115)	481.2 (MW123I)	6.19 (MW217)	26.5 (MW101)	22.3 (MW226)
Maximum	5.30 (MW205S)	37,926.0 (MW232)	7.99 (MW065)	423.6 (MW205S)	28.7 (MW072)
February – April 2022 (Wet Season)					
Minimum	0.25 (MW139)	79.3 (MW018)	5.72 (MW217)	-0.2 (MW115)	26.3 (MW217)
Maximum	6.94 (MW018)	51,132.0 (MW232)	7.60 (MW065)	416.6 (MW236S)	36.5 (MW106)
August – October 2022 (Dry Season)					
Minimum	0.30 (MW220S)	719.0 (MW115)	5.68 (MW217)	40.6 (MW115)	21.5 (MW226)
Maximum	18.20 (MW002)	42,048.0 (MW232)	7.91 (MW115)	374.0 (MW131)	28.2 (MW074)
March 2023 (Wet Season)					
Minimum	0.51 (MW235S)	4.9 (MW101)	6.24 (MW220S)	52.5 (MW212)	27.0 (MW138)
Maximum	6.22 (MW128)	35,058.0 (MW232)	7.89 (MW065)	412.8 (MW138)	32.7 (MW116)

Note: 1 – Microsiemens per centimetre; 2 – Oxidation-reduction potential measured in millivolts (mV) and corrected values calculated by the addition of an offset voltage of 194 mV (for reference electrode Ag/AgCl).

The stabilised readings from the monitoring period indicate:

- Poorly to well oxygenated conditions
- Fresh to saline conditions
- Slightly acidic to slightly alkaline conditions
- Moderately to strongly reducing conditions.

The groundwater parameters recorded during the monitoring period are generally consistent with previous investigations (RPS and Wood, 2019b and 2019c).

7.1.3 Groundwater Analytical Results

All groundwater analytical results for the monitoring period are presented **Table T2 (Appendix B)**. Monitoring locations are presented in **Figure F2 (Appendix A)**. Concentration maps of PFOS+PFHxS and PFOA are presented in **Figure F10 to F21 (Appendix A)** for the monitoring period.

Groundwater monitoring locations summarised by source area/area of interest and PFOS+PFHxS, PFOS and PFOA concentrations recorded during the monitoring period are presented in **Table 8** below.

Table 8 Summary of PFOS, PFOA and PFOS+PFHxS Concentrations in groundwater

Sampling Event	No. Sample Locations Analysed	Compound	Concentration Range (µg/L) in monitoring period	No. of Sample Locations with Concentrations > Laboratory Limit of reporting (LOR)	No. of Sample Locations Exceeding Freshwater and Marine 95% Species Protection guideline (HEPA, 2020)	No. of off-base Sample Locations Exceeding Drinking Water Guideline ² (HEPA, 2020)

¹ There is no applicable guidelines for PFOS+PFHxS in groundwater for the current scenarios.

² Where the guideline values refer to the sum of PFOS and PFHxS, this includes PFOS only, PFHxS only, as well as the sum of the two (HEPA, 2020).

Table 9 presents details of the first-time detections of PFOA, PFOS and PFOS+PFHxS or new exceedance of groundwater guidelines during the monitoring period, as well as new historical maximum or minimum concentrations.

Table 9 Summary of first-time detections, new exceedance of guidelines, and new historical minimums and maximums for PFOA, PFOS and PFOS+PFHxS in groundwater

Note:

1. New historical maximum does not include first-time detections or new exceedance of guideline.
2. Freshwater and marine water (95% species protection values) exceeded.
3. Located in off-base Management Area

Concentrations of PFAS in the sample collected at MW117D during the February - April 2022 sampling have not been considered due to construction activities which led to destruction of the monitoring well and likely impacted sample integrity (refer in **Table 3**). In addition, sample collection deviated from the SAQP.

The first-time detections at MW124 (PFOS+PFHxS in October 2020) and MW125S (PFOA in August 2021) are equal to the laboratory LOR. Both monitoring wells are located on the northwestern base boundary. At MW124, all PFAS compounds returned concentrations below the laboratory LOR in the subsequent monitoring events from 2021 to 2023.

At MW125S, although PFOS was detected for the first time in November 2020 and PFOA in August 2021, other PFAS compounds have previously been detected in the monitoring well.

The first-time detection of PFOS at MW124 in November 2020 is considered an anomaly as PFOS has not been detected at this location since 2020.

The first-time detections for PFOS at MW116, MW117D, MW118, MW124, MW125S, MW205S, MW217, MW220S, MW233 and PFOA at MW106, MW123I and MW125S were equal to or close to the laboratory LOR and have continued to fluctuate over the monitoring period.

Concentrations of PFOS at MW235S have continued to fluctuate over the monitoring since the first-time detection in November 2020, followed by a historical maximum in August 2021 and the subsequent monitoring rounds of 2022 and 2023 reporting PFOS below the laboratory LOR. Similar fluctuations occurred for PFHxS.

It is noted that MW205S, MW220S and MW235S are located in the off-base Management Area.

There were no new exceedances of the drinking water guideline in off-base monitoring wells during the monitoring period, with the exception of MW235S in August 2021, as discussed above.

The new exceedance of the 95% species protection ecological guideline for PFOS in freshwater and marine ecosystems in MW120 (in October 2020), located on the northern base boundary, represents an order of magnitude increase in PFOS concentrations. A new exceedance of the nominated ecological guideline was also reported for PFOS at MW106 (in the Monocell source area) on March 2023 and in off-base well MW232 (in November 2020). It is noted that the sum of PFAS concentrations have remained relatively stable at these locations and continued to fluctuate over the monitoring period.

At MW232, located within the off-base management area, the new exceedance of the 95% species protection ecological guideline for freshwater and marine ecosystems for PFOS in November 2020 almost doubled. Concentrations at this location have continued to fluctuate by an order of magnitude over the monitoring period. PFAS concentrations at this location have fluctuated since 2018.

Concentrations of PFOS in MW120 and MW232 are consistent with other monitoring wells within the same sub-catchment.

New historical maximum concentrations were generally reported within the same order of magnitude and at concentrations close to previous maximum concentrations, except for PFOS+PFHxS at MW131 in August 2022 with resampling in October 2022 confirming the new historical maximum concentration. Subsequent sampling in March 2023 recorded a new historical maximum concentration at this location. Concentrations of PFOS+PFHxS were an order of magnitude higher in March 2023 than in previous sampling events. These changes in concentrations are further discussed in **Section 8.2**.

New historical maximum concentrations were reported in MW018 for PFOS, PFOS+PFHxS and PFOA in March 2022 with the results decreasing by an order of magnitude in August 2022. Seasonal variability has been observed in the concentrations reported for this well between March 2021 and March 2023 indicating concentrations in the wet season tending to be an order of magnitude higher than dry season concentrations.

Historical groundwater concentrations of PFOS+PFHxS and PFOA have been displayed graphically, by catchment area, in **Appendix C** for the locations presented in **Table 10**, and represent the discussion of groundwater analytical results presented above.

Table 10 Groundwater Temporal trend graphs by Catchment Area

Plate ID of Appendix C	Sub-catchment Area	Monitoring Wells
Plate 1 and 2	Catchment A and West sub-catchment	MW125S, MW125I, MW217
Plate 3 to 8	Catchment G and Central sub-catchment: source area/area of interest	MW105, MW128, MW131, MW102, MW065, MW120, MW121, MW122, MW123S, MW123I, MW072, MW074, MW101, MW138

7.2 Surface Water

7.2.1 Geochemical Parameters

Surface water geochemical parameters were measured prior to collecting samples. Current and historical field observations and geochemical parameters are presented in **Table T3, Appendix B** and summarised in **Table 11** for the monitoring period. The water quality parameters recorded during the monitoring period are consistent with the historical data set.

Table 11 Summary – Surface Water Geochemical Parameters

Parameter	DO (mg/L)	EC (µS/cm)	pH (pH units)	Corrected ORP (mV) ¹	Temperature (°C)
October 2020 (Dry Season)					
Minimum	1.92	186.9	6.53	136.9	26.6
Maximum	13.35	64,101.0	8.63	250.0	34.7

Maximum	12.66	43,042.0	8.96	322.4	26.9

Parameter	DO (mg/L)	EC ($\mu\text{S}/\text{cm}$)	pH (pH units)	Corrected ORP (mV) ¹	Temperature ($^{\circ}\text{C}$)
March 2023 (Wet Season)					
Minimum	2.14	3.1	6.42	180.9	26.6
Maximum	9.35	10,695.0	8.88	415.3	32.6

Note: 1 – Oxidation-reduction potential measured in millivolts (mV) and corrected values calculated by the addition of an offset voltage of 194 mV (for reference electrode Ag/AgCl).

The readings from the monitoring period indicate:

- Poor to well oxygenated conditions
- Fresh to saline conditions
- Slightly acidic to slightly alkaline conditions
- Mildly to strongly reducing conditions.

7.2.2 Surface Water Analytical Results

All surface water analytical results for the monitoring period are presented in **Table T4 (Appendix B)**. Monitoring locations are presented in **Figure F3 (Appendix A)** and PFOS+PFHxS and PFOA concentration maps are presented in **Figure F22 to F33 (Appendix A)**.

Surface water monitoring locations summarised by source area/area of interest and PFOS+PFHxS, PFOS and PFOA concentrations recorded during the monitoring period are summarised in **Table 12** below.

Table 12 Summary of PFOS, PFOA and PFOS+PFHxS Concentrations in Surface Water

Sampling Event	No. Sample Locations Analysed	Compound	Concentration Range (µg/L) in monitoring period	No. of Sample Locations with Concentrations > Laboratory LOR	No. of Sample Locations Exceeding Freshwater and Marine 95% Species Protection guideline (HEPA, 2020)	No. of Sample Locations Exceeding Recreational water quality guideline (NHMRC, 2019)	No. of Sample Locations Exceeding Drinking Water Guideline ² (HEPA, 2020)

N/A – not applicable

¹ There is no applicable freshwater or marine water ecological guideline for PFOS+PFHxS.

² Drinking water screening criteria are only applicable to results from SW245, as this is the only surface water location within an emergency drinking water supply for Townsville and is upgradient of Blacks Weir and not tidally influenced (refer **Section 5.0**).³ Location SW110 was resampled after the main sampling round to confirm concentrations. Both samples (collected 1 March 2022 and 26 April 2022) have been deemed representative of this location and have been included in this summary.

⁴ Location SW110 was resampled after the main sampling round to confirm concentrations. Both samples (collected 22 August 2022 and 7 October 2022) have been deemed representative of this location and have been included in this summary.

Table 13 presents details of the first-time detections of PFOS+PFHxS and PFOA or new exceedance of guidelines during the monitoring period, as well as new historical maximum or minimum concentrations.

Table 13 Summary of first-time detections and new exceedance of guidelines, and new historical minimums and maximums for PFOA and PFOS+PFHxS in surface water

Sampling Event	Compound	First-time Detection	New exceedance of guideline	New historical minimum	New historical maximum ¹

Note:

1. New historical maximum does not include first-time detections or new exceedance of guideline.
2. HEPA (2020) Recreation use criteria exceeded
3. HEPA (2020) Freshwater and marine water (95% species protection values) criteria exceeded
4. Located in off-base Management Area
5. New maximum concentrations were reported in March 2022. The location was resampled after the main sampling round to confirm concentrations. The result presented is the result from re-sampling on 26 April 2022 which were lower than the March 2022 results and therefore not tabulated as new maximum concentrations.
6. New maximum concentrations were reported in August 2022. Location was resampled after the main sampling round to confirm concentrations. The result presented is the result from resampling completed in October 2022 which were lower than the August 2022 results but still higher than previous concentrations.^ No historical data are available for this sampling location. The first-time detection is also the first sample collected at this location.

PFAS concentrations in surface water samples collected from the A and West sub-catchment were reported at below the laboratory LOR or at low concentrations below the adopted guidelines during the monitoring period.

Within the G and Central sub-catchment, one location (SW130) collected on-base from the northern boundary recorded a first-time detection of PFOA (0.03 µg/L) close to the laboratory LOR in March 2021, subsequent rounds of sampling have not continued to report PFOA at SW130 in 2022 and 2023. A new historical maximum concentration of PFOS was recorded at this location in March 2021 however the results have not been replicated in the April 2022 and March 2023 monitoring rounds. Concentrations of PFAS in surface water from SW109 and SW110 recorded new historical maximum during the monitoring period and concentrations continue to fluctuate.

One off-base location (SW212) recorded a first-time detection of PFOA (0.02 µg/L) in August 2021. It is noted other PFAS compounds have been historically detected at this location and the concentrations continue to fluctuate close the laboratory LOR.

Within the J/K and East sub-catchment, two on-base locations near the north-eastern boundary (SW121 and SW135) exceeded the recreational use guideline value for PFOS+PFHxS during the monitoring period, as follows:

- SW121 exceeded the recreational use guideline value in October 2020. PFAS concentrations have been showing seasonal variation, since 2018. Concentrations in 2022 were reported below the recreational use guideline value.
- SW135 reported a new exceedance of the recreational use guideline value in March 2021 sampling event with concentrations decreasing below the guideline value in the subsequent monitoring event in August 2021. SW135 also recorded a first-time detection of PFOA (0.07 µg/L) in March 2021. PFOA concentrations returned to non-detect concentrations in the subsequent monitoring events.

Within the J/K and East sub-catchment, one on-base location (SW113) collected from down gradient of the Monocell recorded a first-time detection of PFOA (0.03 µg/L) and a new exceedance of the adopted ecological guideline value for PFOS in October 2020. PFOA concentrations returned to non-detect concentrations and PFOS concentrations returned to below the adopted ecological criteria in the subsequent March 2021 sampling event and the 2022 and 2023 monitoring events.

One new exceedance of PFOS+PFHxS at SW220 exceeded the recreational use guideline value for the first-time in August 2022, with concentrations fluctuating since 2018 and reported below the guideline in March 2023. Downgradient surface water monitoring locations SW242 and SW232 did not exceed the recreational use guideline.

New historical maximum concentrations in 2022 and 2023 were generally reported within the same order of magnitude as the historical results and in most cases at concentrations close to previous maximum concentrations. Where increases were recorded across the monitoring period, subsequent monitoring rounds have generally resulted in results being back within the historical range of concentrations for these locations. These changes in concentrations are inferred to be the result of seasonal fluctuations.

Historical surface water concentrations of PFOS+PFHxS and PFOA have been displayed graphically on temporal trend graphs, by catchment area, in **Appendix C** for the locations identified in **Table 14**.

Table 14 Surface Water Temporal trend graphs by Catchment Area

Plate ID in Appendix C	Sub-catchment Area	Surface water locations
2.1, Plates 19 and 20	A and West sub-catchment	SW126, SW217
2.2.1, Plates 21 and 22	G and Central sub-catchment: source area/area of interest	SW109, SW110, SW129, SW130, SW139, SW140, SW144
2.2.2, Plates 32 and 24	G and Central sub-catchment: Boundary conditions	SW128, SW132, SW133, SW134
2.2.3, Plates 25 and 26	G and Central sub-catchment: Off-base Management Area	SW203, SW205, SW211, SW212, SW233
2.3.1, Plates 27 and 28	J/K and East sub-catchment: source area/area of interest	SW113, SW119, SW120
2.3.2, Plates 29 and 30	J/K and East sub-catchment: Boundary conditions	SW121, SW135, SW136
2.3.3, Plates 31 and 32	J/K and East sub-catchment: Off-base Management Area	SW220, SW232, SW242, SW243
2.4, Plates 33 and 24	Ross River	SW227, SW244, SW245

PFAS concentrations in surface water samples collected from the A and West, G and Central and J/K and East sub-catchments were generally stable except for some key locations discussed further in **Section 8.3**.

PFAS concentration in samples collected from the Ross River were reported below the laboratory LOR and below the adopted human health and ecological guidance values.

7.3 Sediment

7.3.1 Field Observations

Field observations recorded during collection of sediments are presented in **Table T5 (Appendix B)**. Sediments generally comprised a combination of fine to coarse grained sand and gravel, low to medium plasticity clay, silt, and some cobbles, with varying organic content (including grass, roots, leaves and surface algae). These observations are generally consistent across the monitoring period.

7.3.2 Sediment Analytical Results

Available sediment analytical results are presented in **Table T6 (Appendix B)**. Monitoring locations are presented in **Figure F3 (Appendix A)** and PFOS+PFHxS and PFOA concentration maps are presented in **Figure F33 to F45 (Appendix A)**.

PFOS, PFOA and PFOS+PFHxS concentrations recorded during the monitoring period are summarised in **Table 15** below.

Table 15 Summary of PFOS, PFOA and PFOS+ PFHxS Concentrations in Sediment

Sampling Event	No. Sample Locations Analysed	Compound	Concentration Range (mg/kg)	No. of Sample Locations with Concentrations > Laboratory LOR
October 2020	29	PFOS+PFHxS	<0.0002 (various) – 0.0692 (SD121)	21
	29	PFOS	<0.0002 (various) – 0.0461 (SD121)	21
	29	PFOA	<0.0002 (various) – 0.0016 (SD121)	4
March/April 2021	31	PFOS+PFHxS	<0.0002 (SD227, SD244, SD245) – 0.361 (SD144)	28
	31	PFOS	<0.0002 (SD227, SD244, SD245) – 0.356 (SD144)	28
	31	PFOA	<0.0002 (various) – 0.001 (SD109)	6
August 2021	30	PFOS+PFHxS	<0.0002 (SD126, SD227, SD244, SD245) – 0.127 (SD109)	26
	30	PFOS	<0.0002 (SD126, SD227, SD244, SD245) – 0.122 (SD109)	26
	30	PFOA	<0.0002 (various) – 0.0018 (SD119)	8
February – April 2022	31	PFOS+PFHxS	<0.0002 (various) – 0.371 (SD109)	22
	31	PFOS	<0.0002 (various) – 0.253 (SD109)	22
	31	PFOA	<0.0002 (various) – 0.0076 (SD109)	3
August – October 2022	31	PFOS+PFHxS	<0.0002 (various) – 0.596 (SD109)	25
	31	PFOS	<0.0002 (various) – 0.566 (SD109)	25
	31	PFOA	<0.0002 (various) – 0.005 (SD109)	3
March 2023	31	PFOS+PFHxS	<0.0002 (various) – 0.410 (SD109)	26
	31	PFOS	<0.0002 (various) – 0.377 (SD109)	26
	31	PFOA	<0.0002 (various) – 0.0032 (SD109)	8

Table 16 presents details of the first-time detections of PFOS+PFHxS, and PFOA during the monitoring period as well as new historical maximum and minimum concentrations reported.

Table 16 Summary – First-time detections and new historical minimums and maximums of PFOA and PFOS+PFHxS in sediment

Sampling Event	Compound	First-time Detection	New historical minimum	New historical maximum ¹
October 2020	PFOS+PFHxS	SD113 (0.0005 mg/kg) SD119 (0.0333 mg/kg) SD121^ (0.0565 mg/kg) SD126^ (0.0003 mg/kg) SD128^ (0.001 mg/kg) SD129^ (0.0005 mg/kg) SD130^ (0.0021 mg/kg) SD133^ (0.0007 mg/kg) SD134^ (0.0003 mg/kg) SD135 (0.0005 mg/kg) SD136 (0.0018 mg/kg) SD212 (0.005 mg/kg) ² SD233 (0.0022 mg/kg) SD242 (0.0010 mg/kg) ²	SD109 (0.0374 mg/kg) SD110 (0.0417 mg/kg) SD132 (0.0039 mg/kg) SD203 (<0.0002 mg/kg) ² SD220 (0.0155 mg/kg) ²	SD139 (0.0481 mg/kg) SD232 (0.0025 mg/kg) ²

	PFOA	SD144 (0.0012 mg/kg) SD128 (0.0002 mg/kg)	None	SD139 (0.0017 mg/kg)

Note:

1. New historical maximum concentrations do not include first-time detections.
 2. Located in off-base Management Area.
- ^ No historical data are available for this sediment sampling location. The first-time detection is also the first sample collected at this location.

In October 2020, of the six locations with historical data that had first-time detects of PFOS+PFHxS, five were located within the J/K and East sub-catchment (SD113, SD119, SD135, SD136 and SD242) and one was located with the G and Central sub-catchment (SD233). Three of these locations reported PFOS+PFHxS concentrations, one or more orders of magnitude above the laboratory LOR:

- SD119 (with a detection of 0.0333 mg/kg) located on-base, within J/K and East sub-catchment, near the north-eastern Base boundary reported a new historical maximum in October 2020. Subsequent monitoring at this location reported a new historical maximum in August 2021 followed by a reduction in the order of magnitude of reported results to May 2023.
- SD136 (with a detection of 0.0018 mg/kg) is located on-base, within J/K and East sub-catchment, near the north-eastern Base boundary. PFOS+PFHxS concentrations at the co-located surface water sample were also above the historical range in July 2019. Concentrations of PFOS+PFHxS and sum of PFAS at this location continue to fluctuate and further monitoring as part of the OMP is required to understand longer term trends. Similar observations are made of SD113, SD135 and SD242 where concentrations have fluctuated across the monitoring period since the initial detection in October/November 2020.
- SD233 (with a detection of 0.0022 mg/kg) is located within the off-base Management Area in G and Central sub-catchment. Concentrations increased initially but were reported back within the historical range in the most recent sampling event in March 2023.

In March/April 2021, of the four locations with historical data that had first-time detects of PFOS+PFHxS, two were located within the J/K and East sub-catchment (SD120 and SD243) and two were located with the G and Central sub-catchment (SD211 and SD212). Three of these locations reported concentrations, one order of magnitude above the laboratory LOR:

- SD120 (with a detection of 0.0014 mg/kg) is located on-base, near the north-eastern Base boundary. PFOS+PFHxS and PFOA concentrations in the co-located surface water sample (SW120) fluctuated between 2018 and 2022 but remain below the recreational criteria.
- SD243 (with a detection of 0.0009 mg/kg) is located within the off-base Management Area. Fluctuating concentrations of PFAS (within an order of magnitude) have been observed in the results within the monitoring period for this location. PFAS has historically been detected in the co-located surface water sample (SW243) and PFOS+PFHxS concentrations at SW243 remained within the historical range during the monitoring period.
- SD211 (with a detection of 0.0015 mg/kg) and SD212 (0.005 mg/kg) are both located within the off-base Management Area. PFOS+PFHxS and PFOA concentrations in the co-located surface water samples (SW211 and SW212) remained below or close to LOR throughout the monitoring period with similar observations true for the sediment samples at these locations.

All first-time detections of PFOA were close to the laboratory LOR with the exception of SD119 (0.0011 mg/kg) in October 2020. As discussed above, there has been a reduction in the magnitude of the concentrations of PFAS at this location and PFOA results for the last three sampling events have been reported below the LOR.

New historical maximum concentrations were generally reported within the same order of magnitude and at concentrations close to previous maximum concentrations or close to the laboratory limit of reporting. Where increases were recorded in the early monitoring rounds of October 2020 and March/April 2021, concentrations in the subsequent monitoring rounds were generally back within the historical range of concentrations for these locations.

First-time detections of PFOS+PFHxS and PFOA at some locations in October 2020 and October 2021 were attributed to the first-time these locations were sampled. The applicable sediment locations to which this applies are annotated in the table above.

8.0 Interpretive Analysis

8.1 Hydrogeology

The SWLs were measured in the groundwater monitoring wells to evaluate the groundwater elevations (m AHD) across the Management Area. Depth to groundwater measurements collected during the current monitoring period and historical data are presented in **Table T1** (in **Appendix B**) and the inferred potentiometric contours are presented on **Figure 4** (October 2020), **Figure F5** (April 2021), **Figure F6** (August 2021), **Figure F7** (February – April 2022), **Figure F8** (August – October 2022) and **Figure F9** (April 2023) (**Appendix A**).

Most of the wells showed a decrease in groundwater elevation between the post wet and post dry season sampling events in shallow monitoring wells, screened in the Quaternary alluvium aquifer. Conversely, the groundwater elevation generally increased between the post dry season sampling events and the post wet season sampling event.

The majority of wells in the post-wet season event conducted in March 2023 recorded new historical maximums of groundwater elevation above historical ranges. The new maximum groundwater elevations in March 2023 may be associated with the generally above average rainfall through the 2022 dry season and early 2022/2023 wet season. Groundwater elevation response in line with seasonal rainfall is evident in the shallow monitoring wells.

Inferred groundwater flow directions in the shallow aquifer during the monitoring period were consistent with the flow presented in previous investigations (RPS and Wood, 2019b and 2019c), with groundwater from the base flowing north and northeast towards the Ross River floodplain.

8.2 Groundwater Results

Groundwater results for PFAS compared to assessment criteria are presented in **Table T2** in **Appendix B**.

PFAS concentrations were generally consistent with previous (historical) results undertaken since the DSI (RPS and Wood, 2019b).

The highest PFAS concentrations in the monitoring period were detected adjacent to the source areas of the Former Fire Station, and the Monocell/former fire training area both representing previously identified source areas. The maximum concentrations of PFOS+PFHxS during the monitoring period were as follows:

- Former Fire Station: 1,300 µg/L at MW128
- Monocell / Former Fire Training Area: 315 µg/L at MW072.

PFOS, PFOA or PFHxS concentrations were detected in monitoring wells down-hydraulic gradient from the identified PFAS source areas listed above and suggest that the groundwater impacts are associated with these areas.

Within the monitoring period PFAS concentrations did not exceed previous maximum concentrations except for the monitoring wells summarised in **Table 17**.

Table 17 Monitoring well locations with concentrations exceeding historical range in March 2023

Location	On-base (source area/area of interest)	Off-base
A and West Sub-catchment	<ul style="list-style-type: none"> MW125I (Base boundary) 	None
G and Central Sub-catchment	<ul style="list-style-type: none"> MW121 (Sporting fields) MW123I (Lavarack golf course) MW131 (Former Fire Training Area) MW138 (Middle Dam) 	<ul style="list-style-type: none"> MW233
J/K and East Sub-catchment	<ul style="list-style-type: none"> MW114 (Eastern PFAS Contamination Area) MW106 (Monocell) MW002 (base boundary), MW119 (Base boundary) 	<ul style="list-style-type: none"> None

New historical maximum concentrations were reported during the post wet-season sampling in 2022 and 2023. New maximum concentrations exceeded historical concentrations by less than or within the same order of magnitude, except at MW123I (base boundary adjacent to the Lavarack Barracks golf course) and MW131 (Former Fire Training Area). The mass flux study (WSP Golder, 2023) identified MW123S (next to MW123I) as being down-hydraulic gradient of the Former Fire Station and within the catchment (Catchment G) contributing the majority (approximately 75%) of off-base PFAS mass discharged at the base boundary. This well was also identified as having a higher degree of hydraulic conductivity when compared to other boundary wells. Similarly, MW002 in Catchment K exhibited high hydraulic conductivity and was identified as contributing the second highest annual groundwater PFOS+PFHxS mass flux after MW123S.

MW123I concentrations are within the same order of magnitude as adjacent boundary well MW123S and potentially attributed to generally above average rainfall in the preceding 12 months with similar groundwater elevations (within 0.2 m). Historically, the elevation difference between MW123I and MW123S has been an average of 0.6 m. The closure of the golf course, where these wells are located may also influence groundwater elevations due to reduced irrigation and mowing of this area potentially resulting in changes to the surface water runoff and infiltration in the area.

MW131 is of the same order of magnitude as MW072 and MW074 in the adjacent source area. New maximum concentrations were recorded at MW131 in October 2022 and further increased in the following event in March 2023 coinciding with above average monthly rainfall prior to both events.

PFOS was detected for the first time at off-base well MW235S in November 2020 and PFOS+PFHxS concentrations reported a new exceedance of adopted drinking water guidelines values in August 2021. Other PFAS compounds have previously been detected at this location and at two nearby monitoring wells (MW205S and MW236S). At downgradient locations, MW236S, PFOS+PFHxS remain at concentrations above the adopted drinking water guideline values, which is consistent with historical results.

The sampling was completed during a period where the rainfall fluctuated compared to the long-term average. The relative stability within each of the sub-catchment areas suggests the PFAS plume extent, particularly the lateral extent has not changed compared to the historical results.

8.3 Surface Water

Surface water results for PFAS compared to assessment criteria are presented in **Table T4** in **Appendix B** and graphically on **Graph 19 to 34 (Appendix C)** for PFOS+PFHxS and PFOA.

PFAS concentrations were generally consistent with previous (historical) results undertaken since the DSI (RPS and Wood, 2019b), except for those summarised in **Table 17**. The highest PFAS concentrations were detected adjacent to the Former Fire Station, a previously identified source area. The maximum concentration of PFOS+PFHxS was recorded in March 2022, post wet season, at SW109 (192 µg/L).

Table 18 Surface water locations with concentrations above historical range in March 2023

Location	On-base (source area/area of interest)	Off-base
A and West Sub-catchment	None	<ul style="list-style-type: none"> SW217
G and Central Sub-catchment	<ul style="list-style-type: none"> SW109, SW110 (Former Fire Station) SW144 (Top Dam) SW129 and SW130 (Lavarack golf course and sporting fields) SW139 (Middle Dam) SW128, SW132, SW133 (Base Boundary) 	<ul style="list-style-type: none"> SW203 SW205 SW211 SW233
J/K and East Sub-catchment	<ul style="list-style-type: none"> SW119, SW121 (Eastern PFAS Contamination Area) SW113, SW120 (on-base drainage line) SW135 (Base boundary) 	<ul style="list-style-type: none"> SW220 SW232 SW242
Ross River	N/A	<ul style="list-style-type: none"> None

Generally, PFAS compounds are lower in off-base monitoring locations compared to on-base monitoring locations.

SW113 reported a new exceedance of adopted ecological guideline for PFOS in October 2020, returning concentrations below this guideline in the following events. SW242 and SW128 reported new exceedances of the adopted ecological guideline value for PFOS in March 2023. Potentially the new maximum PFOS concentrations in March 2023 are associated with the generally above historic average rainfall resulting in increased concentrations in surface water runoff from potential PFAS source areas on-base.

There were also new exceedances of the adopted recreational guideline value for PFOS+PFHxS at SW119, SW121, SW132, SW135, SW139 and SW220 which were isolated with subsequent events detecting concentrations below this guideline.

New maximum PFOS+PFHxS concentrations at locations SW203 (1.8 µg/L) and SW233 (1.93 µg/L) with the G and Central sub-catchment are marginally below the adopted recreational guideline value of 2.0 µg/L. Both locations have historically exceeded the adopted ecological guideline values.

These new maximum concentrations and exceedances correlate with the findings of the mass flux study summarised in Section 6.1 which identified surface water in catchment G and to a lesser extent catchment K as the dominant mass discharge mechanisms for PFAS migrating off-base.

8.4 Sediment

Sediment results are presented in **Table T5 (Appendix B)**. PFAS concentrations were generally consistent with previous (historical) results undertaken since the DSI (RPS and Wood, 2019b), except for new maximums concentrations summarised in **Table 19**.

Table 19 Sediment locations with concentrations above historical range

Location	On-base (source area/area of interest)	Off-base
A and West Sub-catchment	<ul style="list-style-type: none"> SD126 (Base Boundary) 	<ul style="list-style-type: none"> None
G and Central Sub-catchment	<ul style="list-style-type: none"> SD109, SD110 (Former Fire Station) SD129 (Lavarack Golf Course & Sporting Field) SD128, SD133 (Base Boundary) SD139 (Middle Dam) SD144 (Top Dam) 	<ul style="list-style-type: none"> SD242

Location	On-base (source area/area of interest)	Off-base
J/K and East Sub-catchment	<ul style="list-style-type: none"> SD120, SD121 (Eastern PFAS Contamination Area) 	<ul style="list-style-type: none"> SD232
Ross River	N/A	<ul style="list-style-type: none"> None

First-time detections were reported during the current monitoring period as a result of first-time sampling of sediment at these locations. All locations which were sampled for the first time were within the existing catchment boundaries considered in the DSI (RPS and Wood, 2019b).

Generally, PFAS compounds are lower in off-base monitoring locations compared to on-base monitoring locations.

Some locations in the monitoring period with historical data available had new historical maximum concentrations, although data variability is expected at the low concentrations detected. The highest PFAS concentrations in sediment samples were at SD109 and SD110 located adjacent to the Former Fire Station source area.

Based on the concentrations of PFAS in sediment there is no significant change to the risk to human health and the environment. The frequency and locations of sampling remains sufficient.

9.0 Conceptual Site Model

The CSM was developed during the previous investigation stages (RPS and Wood, 2019a and 2020a) and summarised in the OMP as part of the PMAP (Defence, 2020). The CSM summarises the linkages between PFAS sources, exposure pathways and receptors.

The sampling completed over the monitoring period (October 2020 to April 2023) has provided additional data to further understand the nature and extent of PFAS concentrations in groundwater, surface water and sediment. Comparison to the available historical dataset indicates that PFAS concentrations in groundwater and surface water are relatively stable since the CSM was developed, as part of the DSI, (RPS and Wood, 2019b) and the plume extent has not changed.

Key observations in relation to the CSM include:

- PFAS concentrations were generally within historical ranges.
- Despite new maximums and first-time detects, the inferred PFAS transport mechanisms (of overland flow, leaching to groundwater and groundwater/surface water interaction) and the groundwater, surface water and sediment concentrations are generally similar to those reported in (RPS and Wood, 2019a), (RPS and Wood, 2019b) and (RPS and Wood, 2020a). Some localised increases were noted which are inconsistent with the CSM, at MW131 (located in a source area) and MW123I (located on the base boundary) which reported new maximum concentrations. Off-base well MW235S reported a new exceedance of adopted drinking water guidelines for PFOS+PFHxS that was isolated to a single event in August 2021. Subsequent results were below this guideline. Groundwater is not extracted or used on-base so there is no new exposure pathway at MW131. MW123I and MW235S are within the plume extent previously considered for the CSM and the downgradient off-base well MW236S has consistently reported exceedances of the drinking water guidelines. No new exposure pathways for groundwater were identified.
- On-base surface water location at SW119, SW121, SW132, SW135 and SW139 had new exceedances of the adopted recreational guideline value for PFOS+PFHxS which were isolated with subsequent events detecting concentrations below this guideline. Other on-base surface water locations have historically exceeded the adopted recreational guideline value and were considered in the previous CSM.
- Off-base surface water location SW220 (at Gordon Creek) in Catchment J/K reported an isolated new exceedance of adopted recreational guidelines value for PFOS+PFHxS in August 2022 and concentrations were reported below the adopted guideline, in the subsequent event in March 2023. SW220 has consistently reported concentrations above the adopted ecological guideline values since 2017. Concentrations in further downstream location SW242 (Idalia Lake) and SW232 continue to fluctuate below the adopted recreational guideline value. SW242 exceeded the adopted ecological guideline value for the first-time in March 2023 however the downgradient sample SW232 was reported below the ecological guideline. Human health and ecological receptors in the Ross River and associated tributaries were identified in the CSM and the exposure pathways associated with these receptors remain the same and precautionary advice (and the associated signage) for consumption of fish from Idalia Lakes remains in place.
- Off-base surface water locations SW203 and SW233 have historically exceeded the adopted ecological guideline values and concentrations in the most recent monitoring round are approaching the adopted recreational guideline value. However, concentrations at downstream location SW205 have remained stable. Therefore, the exposure pathways previously considered in the CSM remain unchanged and no new exposure pathways have been identified.
- Newly sampled sediment locations are within sub-catchments on-base and off-base with sediment data already considered in the HHRA (RPS and Wood, 2019a) and ERA (RPS and Wood, 2020a) and the exposure pathways and transport mechanisms associated with sediment have not changed.

The pathways for PFAS exposure and risks to human health and ecological receptors presented in the HHRA (RPS and Wood, 2019a) and the ERA (RPS and Wood, 2020a) are considered to remain relevant and data presented in this report does not suggest any significant changes to these mechanisms.

The data presented in this report do not change the understanding of the CSM. Future monitoring will continue to contribute to an evaluation of any potential changes to the CSM understanding.

10.0 Discussion

10.1 Risk Profile

The risk profile to human health and ecological receptors within the Management Area is unchanged, based on the data assessment which identified that:

- The overall PFAS plume extent of groundwater has not changed compared to historical results.
- Groundwater PFAS concentrations are relatively stable, except for MW123I and MW131 with new maximum concentrations although nearby wells within the same area have concentrations of the same order of magnitude off-base well MW235S recorded an isolated spike in August 2021, but subsequent events are with the same order of magnitude as historical results. Off-base groundwater well MW236S has consistently reported concentrations exceeding the drinking water guideline. The risk assessment previously identified that off-Base groundwater was not used for drinking and was limited to non-potable uses. Recreational use of sporting fields irrigated with groundwater was considered in the risk assessment and as the exposure pathways and transport mechanisms and receptors have not changed, the risk profile remains the same.
- PFAS concentrations in surface water bodies were generally consistent with historical results with some locations off-base (specifically at SW220, in Gordon Creek) and on-base which had isolated new exceedances of adopted recreational guideline for PFOS+PFHxS concentrations. Off-base surface water locations have historically not exceeded the adopted recreational guideline value and on this basis the HHRA considered the exposure pathway for off-base human health receptors to be low and acceptable (RPS and Wood, 2020a). Due to the condition of Gordon Creek (i.e., a swampy area and located next to the main road), it is not considered suitable for recreational purposes such as swimming and fishing. The area is part of the Townsville Connection Road works. An observation during sampling in March 2023 showed early works has commenced. As these exceedances were not sustained over the monitoring period and pathways to recreational receptors are unlikely to be complete for Gordon Creek, the CSM and risk profile are unchanged and further monitoring is required to assess the completeness of the exposure pathway, particularly for off-base recreational receptors. Sediment concentrations have remained stable and consistent with historical results of the respective sub-catchment area either on-base or off-base with SD109 (on-base adjacent to the former fire station) consistently exhibiting the highest concentrations. The risk profile to on-base receptors has not changed.
- Precautionary advice issued by the Queensland Government for the consumption of fish caught from Idalia Lakes remains in place.

Based on a review of the OMP data, AECOM considers that the conclusions made in the HHRA (RPS and Wood, 2019a) and ERA (RPS and Wood, 2020a) still apply and there are no changes to the risk profile.

10.2 Assessment of current OMP

Based on the above review of the data collected during the monitoring period, there are no changes to the understanding of the nature, extent or risks associated with PFAS within the Management Area. The need for monitoring of additional media was not identified as required at this time. Based on this, there are currently no triggers for review of the OMP.

11.0 Conclusions

Groundwater, surface water and sediment monitoring were completed for the OMP between October 2020 and March 2023 in general accordance with the SAQP (AECOM, 2023b). Data from the DSI (RPS and Wood, 2019b) and Seasonal Monitoring Reports completed in 2019 and 2020 (RPS and Wood, 2019c and 2020b) were included in this report to assess changes from historical conditions.

The data collected has met the objectives of the OMP (Defence, 2020) and SAQP (AECOM, 2023b).

Groundwater PFAS concentrations are relatively stable and overall, the data indicate that the nature and extent of PFAS in groundwater off-base has not changed from the understanding presented in the investigation phases and the PMAP (Defence, 2020).

PFAS concentrations in surface water bodies were generally consistent with historical results with some locations off-base and on-base which had isolated new exceedances of adopted recreational guideline for PFOS+PFHxS. Off-base surface water locations have historically not exceeded this guideline, although given the exceedance was isolated and not sustained over the monitoring period, the risk profile is considered unchanged. Continued monitoring is required to assess if this exposure pathway is complete and to confirm if the reported exceedances are sustained over both wet and dry seasonal conditions. The on-base risk profile is unchanged. Whilst some fluctuation in PFAS concentrations in sediment was reported during the monitoring period the distribution of PFAS in sediments has not changed and the concentrations do not present a change to the risk profile.

The CSM was reviewed, and no changes were identified to the sources, pathways or receptors at the base and within the Management Area.

Based on the data reviewed, there were no changes to the risk profile, and there are no triggers to review the ongoing monitoring program. Based on the data, AECOM considers that the conclusions made in the HHRA (RPS and Wood, 2019a) and ERA (RPS and Wood, 2020a) still apply.

A and West sub-Catchment								
SW126	Base Boundary	26/03/2021	8.28	30.1	266.3	138.4	8.11	Medium turbidity, Pale Yellow, No odour, No sheen, Rock drain. Water not Flowing.
	Base Boundary	22/04/2022	5.26	26.4	310.0	114.7	7.14	Clear, Yellow, No odour, No sheen, Culvert, slow flow.
	Base Boundary	8/03/2023	6.93	27.8	294.1	51.4	7.25	Low turbidity, Clear, No odour, Fast flowing, 4m wide, 1cm deep.
SW217	Off-Base	2/11/2020	4.34	28.3	218.0	960	6.71	Yellowish Brown, Organic Odour, Biosheen Appearance.
	Off-Base	29/03/2021	3.49	26.8	316.1	976	7.07	Medium turbidity, Pale Yellow, Slight Organic Odour, No sheen, Creek. Water not Flowing.
	Off-Base	19/08/2021	7.76	24.7	201.8	507	7.92	Clear, Yellowish Brown, No odour, Biosheen Appearance.
	Off-Base	2/03/2022	6.88	32.1	291.6	1099	7.64	Low turbidity, Pale yellow, No odour, No sheen, Creek, no flow.
	Off-Base	22/08/2022	2.83	21.1	322.4	1282	7.20	Low turbidity, Pale yellow, No odour, No sheen, Earthen creek, approximately 5 m across, 10 cm deep. No flow.
	Off-Base	6/03/2023	6.79	28.4	330.4	1399	7.49	Low turbidity, Brown, No odour, No sheen, Drainage channel, 2m wide, 0.3m deep, slow flow.
G and Central Sub-Catchment								
SW109	Former Fire Station	29/03/2021	3.21	28.6	328.5	1284	7.01	Medium turbidity, Light Olive Brown, Organic Odour, No sheen, Open earthen drain. Not Flowing.
	Former Fire Station	1/03/2022	2.47	28.8	181.1	2618	7.27	Medium turbidity, Dark reddish brown, No odour, No sheen, Open earthen drain, no flow.
	Former Fire Station	22/08/2022	5.02	21.6	280.5	1139	7.82	Low turbidity, Clear, No odour, No sheen, Limited water within drainage channel (no flow), highly vegetated, some sediment in water sample.
	Former Fire Station	6/03/2023	7.96	26.6	252.6	16.4	8.03	Low turbidity, Clear, No odour, No sheen, No flow, in man-made drain.
SW110	Former Fire Station	29/03/2021	4.71	29.5	236.8	968	6.82	Medium turbidity, Pale Yellow, Slight Organic Odour, Slight sheen, Open earthen drain. Not Flowing.
	Former Fire Station	1/03/2022	2.85	30.7	184.0	4157	7.27	Medium turbidity, Pale yellow, No odour, No sheen, Open earthen drain, no flow.
	Former Fire Station	26/04/2022	7.28	23.4	373.8	39.1	6.83	Clear, Pale yellow, No odour, No sheen, Earthen drain with concrete culvert, not flowing. Heavy rain previous night.
	Former Fire Station	22/08/2022	2.99	23.4	255.6	2849	7.74	Low turbidity, Clear, No odour, No sheen, Limited amount of water to sample from (no flow), some sediment in water sample.
	Former Fire Station	7/10/2022	2.24	26.8	284.0	3820	8.96	Low turbidity, Pale yellow colour, Organic Odour, No sheen. Earthen drain.
	Former Fire Station	15/03/2023	6.10	28.6	415.3	2568	7.33	Low turbidity, Brown, No odour, Biosheen, Earthen drain, water depth approx. 5cm, channel full of reeds.
SW129	Lavarack Golf Course & Sporting Field	26/03/2021	11.21	35.2	222.7	800	9.92	Medium turbidity, Pale Yellow, Organic Odour, No sheen, Rock drain. Water not Flowing.
	Lavarack Golf Course & Sporting Field	22/04/2022	9.65	25.7	269.5	235.9	8.51	Clear, Pale yellow, No odour, No sheen, Culvert, no flow. No water (dry culvert) during initial round.
	Lavarack Golf Course & Sporting Field	6/03/2023	5.28	28.7	237.0	948	8.59	Low turbidity, Clear, No odour, No sheen, Bubbles on surface, tad poles observed, drain slight flow.
SW130	Lavarack Golf Course & Sporting Field	26/03/2021	6.90	33.8	210.8	1135	9.69	Medium turbidity, Pale Yellow, Organic Odour, No sheen, Rock drain. Water not Flowing.
	Lavarack Golf Course & Sporting Field	22/04/2022	9.34	25.8	294.8	620	7.35	Clear, Pale yellow, No odour, No sheen, Culvert, no flow. No water (dry culvert) during initial round.
	Lavarack Golf Course & Sporting Field	8/03/2023	6.41	27.2	347.1	275.3	7.15	Low turbidity, Clear, No odour, No sheen, Highly vegetated - low flow.
SW139	Top Middle and Lower Dams	29/10/2020	3.39	26.6	207.0	672	6.53	Yellowish Brown, No odour, No sheen.
	Top Middle and Lower Dams	29/03/2021	4.85	30.1	302.5	443.4	7.26	Low turbidity, Pale Yellow, Slight Organic Odour, No sheen, Dam. Water not Flowing.
	Top Middle and Lower Dams	22/06/2021	5.80	22.9	481.4	449.3	6.79	Low turbidity, Pale Yellow, Slight Organic Odour, No sheen, Dam. Water not Flowing.
	Top Middle and Lower Dams	15/08/2021	4.45	23.4	363.6	596	6.97	Low turbidity, Reddish Yellow, Strong sulfurous odour, No sheen, Dam. Water not flowing.
	Top Middle and Lower Dams	1/03/2022	6.08	33.4	325.0	415.2	7.18	Low turbidity, Pale yellow, Slight organic odour, No sheen, Dam, no flow.
	Top Middle and Lower Dams	22/08/2022	2.80	22.5	294.8	520	8.20	Low turbidity, Clear, No odour, No sheen, High plant content, difficult to obtain sample. No flow.
	Top Middle and Lower Dams	6/03/2023	3.61	28.2	256.2	462.4	7.37	Low turbidity, Clear, No odour, No sheen, Leafy bottom, side of lake, no flow.
SW140	Top Middle and Lower Dams	29/10/2020	5.16	31.7	214.2	737	6.54	Olive Yellow, Organic Odour, No sheen.
	Top Middle and Lower Dams	29/03/2021	5.47	30.4	314.2	351.7	7.23	Medium turbidity, Pale Yellow, Slight Organic Odour, No sheen, Dam. Water not Flowing.
	Top Middle and Lower Dams	15/08/2021	4.08	22.5	355.9	572	7.07	Clear, Yellowish Red, No odour, No sheen, Dam. Water not flowing.
	Top Middle and Lower Dams	15/08/2021	4.08	22.5	355.9	572	7.07	Clear, Yellowish Red, No odour, No sheen, Dam. Water not flowing.
	Top Middle and Lower Dams	1/03/2022	5.97	32.4	383.6	328.6	6.99	Low turbidity, Pale yellow, No odour, Dam, no flow.
	Top Middle and Lower Dams	22/08/2022	5.55	23.2	303.9	440.5	7.85	Low turbidity, Clear, No odour, No sheen, Thick grass at bank. No flow.
	Top Middle and Lower Dams	6/03/2023	4.42	27.8	247.9	343.7	7.21	Low turbidity, Clear, No odour, No sheen, on dam wall, low flow, lots of fish.
SW144	Top Middle and Lower Dams	13/05/2021	5.67	23.8	334.8	253.4	7.24	Low turbidity, Clear, No odour, No sheen, Dam. Water not Flowing. Water depth 0.5 m at sample location.
	Top Middle and Lower Dams	15/08/2021	5.58	23.4	356.0	251.8	6.85	Clear, Yellowish Red, No odour, No sheen, Dam. Water not flowing.
	Top Middle and Lower Dams	15/08/2021	5.58	23.4	356.0	251.8	6.85	Clear, Yellowish Red, No odour, No sheen, Dam. Water not flowing.
	Top Middle and Lower Dams	1/03/2022	2.94	31.6	277.7	337.7	7.35	Low turbidity, Pale yellow, No odour, No sheen, Dam, no flow.
	Top Middle and Lower Dams	22/08/2022	1.87	21.7	294.0	218.9	8.04	Low turbidity, Clear, No odour, No sheen, Shady area, shallow and silty bank some sediment in sample due to low water level. No flow.
	Top Middle and Lower Dams	10/03/2023	2.65	31.5	318.0	247	6.86	Low turbidity, Clear, No odour, No sheen.
SW128	Base Boundary	26/03/2021	3.81	31.4	254.4	347.8	8.04	Medium turbidity, Pale Yellow, Organic Odour, No sheen, Rock drain. Water not Flowing.
	Base Boundary	22/04/2022	6.08	26	321.1	155.7	7.77	Low turbidity, Pale yellow, No odour, No sheen, Culvert, no flow. No water (dry culvert) during initial round.
	Base Boundary	6/03/2023	8.99	27.2	253.4	509.4	7.81	Low turbidity, Clear, No odour, No sheen, Clay lined culvert, low flow, some green algae.
SW132	Base Boundary	29/10/2020	3.28	27	170.8	186.9	6.63	Yellowish Brown, Slight Organic Odour, No sheen.
	Base Boundary	1/04/2021	3.27	25.6	290.4	677	7.03	Medium turbidity, Yellow, No odour, No sheen, Rock drain. Water Flowing.
	Base Boundary	1/03/2022	5.74	34.8	292.1	458.9	7.53	Low turbidity, Pale yellow, No odour, No sheen, Rock drain, no flow.
	Base Boundary	6/03/2023	2.98	28.8	240.5	423.3	7.14	Low turbidity, Clear, No odour, No sheen, High flow, gravel culvert from lake.
SW133	Base Boundary	22/04/2022	7.16	24.8	297.3	130.7	7.38	Clear, Pale yellow, No odour, No sheen, Culvert, no flow. No water (dry culvert) during initial round.
	Base Boundary	6/03/2023	4.46	26.8	245.6	567	7.58	Low turbidity, Clear, No odour, No sheen, slow flow in culvert.
SW134	Base Boundary	29/10/2020	8.47	34.7	205.6	434.2	7.59	Yellowish Brown, Organic Odour, No sheen.
	Base Boundary	1/04/2021	5.92	25.7	261.4	300.9	7.94	Low turbidity, Pale Yellow, No odour, No sheen, Earthen drain. Water not Flowing.
	Base Boundary	18/08/2021	1.69	24.6	266.2	415	7.19	Low turbidity, Yellow, Slight Organic Odour, Biosheen Appearance, Earthen drain, Puddle in a rutt, no flow.

Location ID	Source Area / Area of Interest	Sampled Date	Sample Comments
A and West sub-Catchment			
SD126	Base Boundary	29/10/2020	CLAY, medium plasticity, brown with pale grey mottled, moist, firm. organic components - roots
	Base Boundary	26/03/2021	Sandy CLAY. Medium plasticity, grey, with organic material.
	Base Boundary	18/08/2021	Silty gravelly SAND. Fine to medium grain, sub-angular, loose, dry.
	Base Boundary	2/03/2022	Gravelly SAND, brown/red, poorly graded, moist, low organic content. No odour.
	Base Boundary	23/08/2022	SAND, light brown, medium grained, loose. No odour. Nil
	Base Boundary	8/03/2023	SAND, yellow, medium grained, poorly graded, with trace subangular gravel, wet. No odour.
SD217	Off-Base	2/11/2020	silty CLAY, low plasticity, dark grey, saturated, firm.
	Off-Base	29/03/2021	Sandy SILT. Fine sands, dark grey, firm, saturated, with organic materials
	Off-Base	19/08/2021	Silty SAND. Sub-angular, red brown, saturated.
	Off-Base	2/03/2022	CLAY, dark brown, medium plasticity, high organic content (biota, roots and leaves). No odour.
	Off-Base	22/08/2022	sandy CLAY, firm, medium plasticity, wet, dark brown to black, fine grained sand. No odour. Organic content (roots and leaves)
	Off-Base	8/03/2023	sandy CLAY, firm, dark brown to black, fine grained sand, wet. Organic content (roots and leaves). No odour.
SD227	Off-Base	3/11/2020	SAND, fine, well graded, dark grey, saturate. some organics
	Off-Base	26/03/2021	Silty SAND. Fine, loose, dark grey with black organic inclusions, saturated, with organic material.
	Off-Base	18/08/2021	Silty SAND. Medium to coarse grain, loose, dark grey.
	Off-Base	22/08/2022	silty SAND, light grey, fine to coarse grained. No odour. Nil
	Off-Base	8/03/2023	CLAY, fine, brown, small amounts of gravel and sand. No odour.
G and Central Sub-Catchment			
SD109	Former Fire Station	29/10/2020	sandy CLAY, low plasticity, dark brown, with some, dry to moist, soft. highly organic
	Former Fire Station	29/03/2021	Sandy gravelly CLAY. Low plasticity, soft, angular sands and gravels, wet, with some organic materials.
	Former Fire Station	16/08/2021	Sandy, silty, CLAY. Low plasticity, fine grain sand, brown, moist, with medium to coarse gravels.
	Former Fire Station	1/03/2022	Silty GRAVEL, cobbles to boulders present, grey and brown, saturated, very poorly graded. No odour. Low organic content (leaves). Very rocky/gravelly.
	Former Fire Station	22/08/2022	gravelly SAND, well graded, sub rounded gravel, dry. No odour. Some surface algae
	Former Fire Station	6/03/2023	SAND, brown, medium grained, poorly graded, wet, No odour.
SD110	Former Fire Station	29/10/2020	CLAY, medium to high plasticity, brown-grey with grey mottled, with some gravels and organics, dry to moist, soft.
	Former Fire Station	29/03/2021	Sandy CLAY. Low plasticity, firm, grey with orange mottling, moist.
	Former Fire Station	16/08/2021	Sandy CLAY. Low plasticity, medium grain sub-angular sand, brown, moist, with medium gravels.
	Former Fire Station	1/03/2022	CLAY and SILT, grey/brown, low plasticity, poorly graded. No odour. High organic content (reeds and leaves).
	Former Fire Station	22/08/2022	sandy CLAY, medium plasticity, dark grey, fine grained sand, wet. No odour. High organic content
	Former Fire Station	6/03/2023	Sandy CLAY, brown, low plasticity, firm, moist. No odour.
SD129	Lavarack Golf Course & Sporting Field	29/10/2020	SAND, fine to medium, well graded, sub-rounded to sub-angular, pale brown with brown speckled, dry, very loose.
	Lavarack Golf Course & Sporting Field	26/03/2021	Silty, sandy GRAVEL. Medium to coarse sand and gravels, balck, with organic material.
	Lavarack Golf Course & Sporting Field	18/08/2021	Silty GRAVEL. Fine gravel, brown and orange, dry, with some sand.
	Lavarack Golf Course & Sporting Field	2/03/2022	Gravelly SAND, brown/red, poorly graded, some fine cohesive particles, moist. No odour. High organic content (grass, roots).
	Lavarack Golf Course & Sporting Field	24/08/2022	SAND, medium to coarse grained, loose, brown to yellow, dry. No odour. Organics (leaves)
	Lavarack Golf Course & Sporting Field	6/08/2023	CLAY, pale brown grey, low plasticity, wet, No odour.
SD130	Lavarack Golf Course & Sporting Field	29/10/2020	SAND, non-plastic, dark brown with red-brown, with some gravels, clay and organic matter, moist, soft.
	Lavarack Golf Course & Sporting Field	26/03/2021	Silty, gravelley SAND. Black sand, orange/brown gravels, saturated, with organic material.
	Lavarack Golf Course & Sporting Field	18/08/2021	SAND. Medium to coarse, sub-rounded to sub-angular, brown, orange and pink, dry, with medium gravels.
	Lavarack Golf Course & Sporting Field	2/03/2022	Gravelly SAND, reddish/brown, poorly graded, moist. No odour. Low organic content. Moisture increasing with depth.
	Lavarack Golf Course & Sporting Field	24/08/2022	SAND, medium to coarse grained, loose, brown to yellow, dry. No odour. Nil
	Lavarack Golf Course & Sporting Field	8/03/2023	SAND, brown, medium grained, with gravel, wet, with algae. High organic content. No odour.
SD133	Lavarack Golf Course & Sporting Field	29/10/2020	silty CLAY, low plasticity, dark grey, fine grained, dry to moist
	Lavarack Golf Course & Sporting Field	29/03/2021	Sandy gravelly CLAY. Low plasticity, firm, fine sands, medium to coarse gravels, grey/brown, moist, with organic materials and some biota (ants and worms)
	Lavarack Golf Course & Sporting Field	16/08/2021	Sandy CLAY. Low plasticity, firm, fine sands, medium to coarse gravels, grey/brown.
	Lavarack Golf Course & Sporting Field	1/03/2022	Silty SAND, soft, grey, fine, poorly graded, dry, organic material present. No odour.
	Lavarack Golf Course & Sporting Field	23/08/2022	gravelly sandy CLAY, grey, low plasticity, medium grained sand, fine to coarse angular gravel, dry. No odour. Organic content (grass and plat roots)
	Lavarack Golf Course & Sporting Field	8/03/2023	Sandy CLAY, brown, low plasticity, wet. No odour.
SD134	Lavarack Golf Course & Sporting Field	29/10/2020	sandy-gravelly CLAY, low to medium plasticity, dark grey with grey mottled, with some silt and organic matter, wet, soft to firm, compost - decayed organic matter odour.
	Lavarack Golf Course & Sporting Field	1/04/2021	Sandy SILT. Fine to medium grain sands, dark grey/brown, saturated, with organic materials.
	Lavarack Golf Course & Sporting Field	18/08/2021	Silty CLAY. Low plasticity, grey, soft, saturated.
	Lavarack Golf Course & Sporting Field	1/03/2022	Silty CLAY, dark brown, medium plasticity, moist. No odour. High organic content (roots and leaves).
	Lavarack Golf Course & Sporting Field	22/08/2022	sandy SILT, soft, black, non plastic, fine to medium sand, dry. No odour. Minor organic content
	Lavarack Golf Course & Sporting Field	8/03/2023	Silty SAND, brown, medium grained, wet. Low organic content. No odour.
SD139	Top Middle and Lower Dams	29/10/2020	clayey SAND, medium to coarse, well graded, brown, highly organic - roots and leaves, saturated, loose, rotten egg (sulfurous).
	Top Middle and Lower Dams	29/03/2021	Sandy SILT. Black, saturated, with fine sands and organic material.
	Top Middle and Lower Dams	16/08/2021	Silty SAND. Medium grain sub-angular, black, saturated.
	Top Middle and Lower Dams	1/03/2022	Sandy SILT, dark brown, low plasticity, well graded, saturated. Organic odour. High organic content (roots, leaves and decaying sticks). Low proportion of soil matrix.
	Top Middle and Lower Dams	22/08/2022	Sandy CLAY, medium plasticity, dark brown, wet. Organic odour, high organic content - leaves and plant roots
	Top Middle and Lower Dams	6/03/2023	Sandy CLAY, brown, low plasticity, firm, dry. No odour.

Location ID	Source Area / Area of Interest	Sampled Date	Sample Comments
SD140	Top Middle and Lower Dams	29/10/2020	clayey SILT, non-plastic, dark grey with brown, dry, compost - decayed organic matter odour. high organic content
	Top Middle and Lower Dams	29/03/2021	Clayey SILT. Soft, dark grey, with some fine sands and organic material.
	Top Middle and Lower Dams	16/08/2021	Silty SAND. Medium grain sub-angular, saturated, with medium gravels.
	Top Middle and Lower Dams	1/03/2022	SILT and SAND, grey and dark grey, moderately graded. No odour. High organic content (roots and leaves).
	Top Middle and Lower Dams	22/08/2022	gravelly SAND, fine to coarse, poorly graded, wet. No odour. High organic content
	Top Middle and Lower Dams	6/03/2023	silty SAND, brown, medium grained, poorly graded, dry. High root content. No odour.
SD144	Top Middle and Lower Dams	13/05/2021	Silty SAND. Fine to coarse sand with medium sub-angular gravels, black, saturated, with organic material.
	Top Middle and Lower Dams	16/08/2021	Sandy SILT. Low plasticity, grey brown, saturated, with fine gravels.
	Top Middle and Lower Dams	1/03/2022	Silty SAND, dark brown, fine grained. No odour. High organic content (roots and leaves).
	Top Middle and Lower Dams	22/08/2022	sandy CLAY, low plasticity, fine grained sand, wet. No odour. Some organic content (leaves)
	Top Middle and Lower Dams	10/03/2023	CLAY, soft, dark brown, low plasticity, fine grained, subrounded sand, moist. Some organic content (leaves). No odour.
SD128	Base Boundary	29/10/2020	SAND, medium to coarse, poorly graded, sub-rounded to sub-angular, red-brown with dark brown, trace of silt, moist, very loose, weakly cemented.
	Base Boundary	26/03/2021	Silty CLAY. Medium plasticity, firm, grey, with some sand and gravels, with some organic material.
	Base Boundary	18/08/2021	Silty gravelly SAND. Fine to medium grain, sub-angular, loose, dry.
	Base Boundary	2/03/2022	Sandy GRAVEL, brown/grey, poorly graded, moderate organic content (roots). No odour.
	Base Boundary	23/08/2022	gravelly sandy CLAY, low plasticity, fine to coarse grained sand, fine to coarse angular gravel, moist, dark brown. No odour. Organic content (roots), location was dry
	Base Boundary	9/03/2023	CLAY, grey, low plasticity, firm, wet. Organic content (roots), location was dry. No odour.
SD132	Base Boundary	29/10/2020	silty, sandy CLAY, fine grained, dark grey, saturated, very soft, highly organic - leaves and roots
	Base Boundary	1/04/2021	Sandy CLAY. Fine sands, grey with brown/orange mottling, saturated, with some angular gravels.
	Base Boundary	18/08/2021	Location not sampled. Area was rocky with no sediment or water.
	Base Boundary	22/04/2022	Gravelly SAND, fine to coarse grain with fine to coarse gravels, some cobbles, loose, wet, dark brown, some organics (roots). No odour.
	Base Boundary	22/08/2022	silty CLAY, firm, medium plasticity, dark brown to black, trace fine to medium angular gravel. No odour. Nil
	Base Boundary	6/03/2023	SAND, brown, medium to large grained, well graded, wet. Low organic content. Slow flow. No odour.
SD203	Off-Base	2/11/2020	SAND, fine to medium, well graded, brown with red-brown speckled, saturated, very loose, rotten egg (sulfurous).
	Off-Base	29/03/2021	Silty SAND. Fine sands, dark brown, firm, saturated, with organic materials
	Off-Base	19/08/2021	Silty SAND. Fine to medium grain, firm, brown, saturated.
	Off-Base	2/03/2022	SAND, medium coarse, saturated, well graded, angular, low organic content. No odour.
	Off-Base	22/08/2022	SAND, loose, medium to coarse grained, light brown to yellow, wet. No odour. Nil
	Off-Base	8/03/2023	SAND, loose, light brown, medium grained, wet. No odour.
SD205	Off-Base	2/11/2020	SILT, non plastic, grey, fine grained, saturated
	Off-Base	29/03/2021	Sandy SILT. Fine to medium sands, loose, saturated, with organic materials.
	Off-Base	19/08/2021	Sandy SILT. Medium plasticity.
	Off-Base	2/03/2022	Silty CLAY, dark brown, medium plasticity, moist. Organic odour. Moderate organic content (roots and leaves).
	Off-Base	22/08/2022	gravelly SAND, poorly graded, loose, wet. No odour. Nil
	Off-Base	9/03/2023	CLAY, loose, grey, small fine gravel, low plasticity. Low organic matter. No odour.
SD211	Off-Base	2/11/2020	silty-sandy GRAVEL, low plasticity, dark grey with black, with some clay, saturated, soft, some organic matter
	Off-Base	1/04/2021	Silty SAND. Loose to firm, medium sands, dark grey, saturated, with organic materials.
	Off-Base	19/08/2021	Silty SAND. Black, saturated.
	Off-Base	3/03/2022	Sandy GRAVEL, dark grey, fine graded, moderate organic content (woody material). No odour.
	Off-Base	25/08/2022	sandy CLAY, brown to black, low plasticity, fine to medium grained, wet. No odour. Organic content - roots and leaves
	Off-Base	9/03/2023	gravelly CLAY, brown, low plasticity, firm. Wet. No flow. No odour.
SD212	Off-Base	2/11/2020	sandy SILT, non-plastic, black with dark grey, trace of coarse gravels, saturated, very soft, some organic matter
	Off-Base	1/04/2021	Silty SAND. Loose, fine to medium sands, grey/brown, saturated, with organic materials.
	Off-Base	19/08/2021	Silty SAND. Sub-angular, mottled brown and black, saturated.
	Off-Base	3/03/2022	SAND, reddish brown, coarse, poorly graded, with some medium gravel, saturated, moderate organic material. No odour.
	Off-Base	25/08/2022	gravelly SAND, brown, poorly graded, wet, some medium sub angular gravel. No odour. Some organic content (Plant roots and decomposed grass and leaves)
	Off-Base	9/03/2023	SAND, yellow, fine grained sand, poorly graded, wet. Low flow. No odour.
SD233	Off-Base	2/11/2020	CLAY, low to medium plasticity, pale grey, with some silt, saturated, firm. highly organic
	Off-Base	29/03/2021	Sandy SILT. Fine sands, dark brown, firm, saturated, with organic materials
	Off-Base	18/08/2021	Silty SAND. Loose, dry.
	Off-Base	2/03/2022	CLAY, dark brown, medium plasticity, wet. No odour. High organic content
	Off-Base	22/08/2022	loamy SAND, low plasticity, dark brown, wet, fine grained sand, loose. No odour. Organic content - leaves
	Off-Base	15/03/2023	SAND, loose to medium dense, brown, fine to medium grained, subangular, with clay. Organic content (tree and grass roots). No odour.
SD244	Off-Base	3/11/2020	gravelly SAND, fine to coarse, poorly graded, angular to sub-angular, orange-brown, saturated, very loose. some shell fragments and small crustaceans
	Off-Base	26/03/2021	Gravelly SAND. Coarse sand, loose, coarse angular gravels, orange brown, saturated, with organic material.
	Off-Base	18/08/2021	Silty, sandy GRAVEL. Fine gravel, medium density, brown, saturated.
	Off-Base	22/08/2022	sandy GRAVEL, angular gravel, pale grey, wet. No odour. Nil
	Off-Base	8/03/2023	gravelly SAND, loose, brown, fine to medium gravel/sand. No odour.

Location ID	Source Area / Area of Interest	Sampled Date	Sample Comments
J/K and East Sub-Catchment			
SD119	Eastern PFAS Contamination Area	29/10/2020	SILT, non-plastic, black with black, with some organic matter, wet, very soft, compost - decayed organic matter odour.
	Eastern PFAS Contamination Area	29/03/2021	Silty SAND. Fine sands, dark brown, soft, saturated.
	Eastern PFAS Contamination Area	18/08/2021	Silty CLAY. Low plasticity, very soft, grey, saturated.
	Eastern PFAS Contamination Area	1/03/2022	Silty SAND, brown and black, fine grained, sub-angular, saturated, low organic content. No odour.
	Eastern PFAS Contamination Area	22/08/2022	gravelly SAND coarse, well graded, sub angular gravel, brown to yellow, moist. No odour. Some surface algae
SD121	Eastern PFAS Contamination Area	10/03/2023	Sand, loose, brown/black, fine grained, subangular, moist. Some surface algae. No odour.
	Eastern PFAS Contamination Area	29/10/2020	SILT, non-plastic, black with red-brown mottled, wet, very soft, compost - decayed organic matter odour odour.
	Eastern PFAS Contamination Area	29/03/2021	Silty CLAY. Low plasticity, soft, grey and brown, moist, with organic materials.
	Eastern PFAS Contamination Area	16/08/2021	Silty GRAVEL. Medium to coarse, sub-angular gravel, loose, dark grey, saturated.
	Eastern PFAS Contamination Area	22/04/2022	Clayey SAND, dark brown to dark grey, fine grained, loose, saturated with some organics (grass roots). No odour.
	Eastern PFAS Contamination Area	22/08/2022	clayey SAND, medium density, dark grey, low plasticity, wet, trace silt. Organic odour. Plant roots and surface algae
SD113	Eastern PFAS Contamination Area	6/03/2023	Silty CLAY, brown, med plasticity, with trace of sand. Plant roots and surface algae. No odour.
	On-Base	28/10/2020	SAND, brown, coarse grained, saturated, large cobbles and fine to coarse gravels
	On-Base	29/03/2021	Gravelly SAND. Loose, brown/orange, saturated, with traces of silt.
	On-Base	18/08/2021	SAND. Medium to coarse grain, sub-angular, very loose, light brown and orange, dry, with some silt.
	On-Base	1/03/2022	SAND, loose, fine to medium grained, sub angular to rounded, well graded, dry, low organic content. No odour.
	On-Base	22/08/2022	gravelly SAND, well graded with sub rounded gravel, trace clay. No odour. Surface algae present
	On-Base	9/03/2023	gravelly SAND, well graded with sub rounded gravel. Low organic matter. No odour.
SD120	On-Base	28/10/2020	gravelly SAND, medium to coarse, well graded, sub-angular, brown with red, dry to moist, very loose, roots.
	On-Base	29/03/2021	Gravelly SAND. Brown, loose, saturated, with traces of silt.
	On-Base	18/08/2021	GRAVEL. Medium to coarse grain, sub-rounded to sub-angular, loose, brown, orange and black, dry, with cobbles and traces of silt.
	On-Base	1/03/2022	Gravelly SAND, poorly graded, moist, reddish brown, low organic content. No odour.
	On-Base	3/09/2022	gravelly SAND, well graded, medium grained, some medium angular to subangular gravel, brown to yellow. No odour. Minor organic material in sample
	On-Base	9/03/2023	gravelly SAND, well graded, medium grained, some medium angular to subangular gravel, brown to yellow. Minor organic material in sample. No odour.
SD135	Base Boundary	28/10/2020	SAND, red-orange, saturated.
	Base Boundary	29/03/2021	Silty SAND. Loose, medium grain, brown, saturated, with organic materials.
	Base Boundary	18/08/2021	SAND. Medium to coarse grain, sub-angular, orange, brown and pink, saturated.
	Base Boundary	1/03/2022	Gravelly SAND, soft, light brown and orange, sub angular to sub rounded coarse sand with fine to coarse gravels, saturated. No odour. High organic content
	Base Boundary	22/08/2022	gravelly SAND, fine to medium grained, poorly graded, wet. No odour. Organic content (roots)
	Base Boundary	6/03/2023	SAND, brown yellow, medium grained, poorly graded, wet. No odour.
SD136	Base Boundary	28/10/2020	SAND, brown, saturated. trace organic matter
	Base Boundary	26/03/2021	Sandy SILT. Soft, dark grey/brown, moist, with organic material.
	Base Boundary	16/08/2021	Sandy SILT. Low plasticity, firm, grey, dry, with medium sub-angular gravels.
	Base Boundary	2/03/2022	Silty SAND, reddish/brown, poorly graded, saturated. No odour. High organic content (algal biofilm and leaves).
	Base Boundary	23/08/2022	sandy CLAY, low plasticity, medium subangular sand, dark brown, high organic content. No odour. Upstream of a disturbed site - TCC sewer upgrade
	Base Boundary	6/03/2023	SAND, yellow brown, medium grained, poorly graded, wet. No odour.
SD220	Off-Base	2/11/2020	silty CLAY, low plasticity, dark grey, saturated, soft, highly organic - roots.
	Off-Base	1/04/2021	Silty sandy CLAY. Low plasticity, very fine sands, grey/brown with orange mottling, wet, with organic materials.
	Off-Base	18/08/2021	Silty SAND. Saturated.
	Off-Base	2/03/2022	CLAY, dark brown/black, medium plasticity, moderate organic content. No odour.
	Off-Base	22/08/2022	silty CLAY, grey and black, wet, medium plasticity. Organic odour. Organic content
	Off-Base	9/03/2023	CLAY, grey, high plasticity, wet. Low organic matter, low flow. No odour.
SD232	Off-Base	2/11/2020	silty CLAY, low plasticity, grey, saturated, soft to firm, compost - decayed organic matter odour.
	Off-Base	29/03/2021	SILT. Soft, black, saturated, with organic material.
	Off-Base	18/08/2021	Silty SAND. Sub-angular, dense, with traces of gravels.
	Off-Base	2/03/2022	SILT and CLAY, brown and black, medium plasticity, moderate organic content. No odour.
	Off-Base	22/08/2022	silty CLAY, soft, medium plasticity, black, wet. No odour. Some organic content
	Off-Base	9/03/2023	CLAY, loose, grey, low plasticity, medium sized gravel. Some organic matter. No odour.
SD242	Off-Base	2/11/2020	silty CLAY, medium plasticity, grey, with some sub angular gravels, saturated, soft to firm. dead fish heads nearby - likely from fishing
	Off-Base	29/03/2021	Silty CLAY. Soft, saturated, dark grey, with angular gravels and fine to coarse sand, with organics.
	Off-Base	16/08/2021	Sandy SILT. Low plasticity, very soft, grey, saturated.
	Off-Base	22/04/2022	Sandy CLAY, soft, dark brown to dark grey, medium plasticity, saturated, some fine sands with trace organics (grass roots). No odour.
	Off-Base	22/08/2022	sandy CALY, soft, medium plasticity, brown and black, wet, fine grained sand with some medium angular gravel. No odour. Nil
	Off-Base	9/03/2023	CLAY, light grey, fine sand, high plasticity. No odour.
SD243	Off-Base	2/11/2020	silty CLAY, medium plasticity, dark grey, saturated, soft.
	Off-Base	29/03/2021	Silty CLAY. Dark grey, saturated, with fine sands and inclusions of high plasticity clay.
	Off-Base	16/08/2021	Sandy SILT. Medium plasticity, fine grain, dark grey, saturated.
	Off-Base	2/03/2022	Silty CLAY, dark grey, black, medium plasticity, low organic content. No odour.
	Off-Base	22/08/2022	clayey SAND, loose, fine grained, dark brown and black, low plasticity clay. No odour. Nil
	Off-Base	9/03/2023	CLAY, firm, dark grey, medium fine sand/gravel. Low organic matter. No odour.

Location ID	Source Area / Area of Interest	Sampled Date	Sample Comments
SD245	Off-Base	3/11/2020	gravelly SILT, non-plastic, dark grey, saturated, soft, sub-angular gravels.
	Off-Base	26/03/2021	Silty SAND. Fine, loose, dark grey, saturated, with organic material.
	Off-Base	18/08/2021	Silty CLAY. Low plasticity, soft, saturated.
	Off-Base	22/08/2022	silty SAND, pale grey, fine to coarse grained. Sulforous odour and high organic content
	Off-Base	8/03/2023	CLAY, brown, firm, wet. High organic matter. No odour.

Graphs

Graphs – Historical Concentrations

Historical concentrations of the sum of perfluorooctane sulfonate and perfluorohexane sulfonate (i.e. PFOS+PFHxS), as well as concentrations of perfluorooctanoic acid (PFOA) in groundwater and surface water have been displayed graphically, by catchment area.

The following is noted regarding the graphical presentations:

- Straight lines have been used for the purpose of joining sequential data points only. The lines do not represent trends in the concentrations between data points.
- Where a concentration value was reported below the laboratory limit of reporting (i.e. <LOR), the LOR value itself has been adopted for graphing purposes
- In groundwater samples, where concentrations of either PFOS+PFHxS or PFOA were reported <LOR, the LOR value was 0.01 µg/L in the majority of the samples, with the exception of the following:
 - 0.02 µg/L for PFOA in select samples collected at MW217, MW124, MW235S and MW117D.
 - 0.02 µg/L for PFOS+PFHxS in select samples collected at MW124 and MW235S.
 - 0.04 µg/L for PFOA in select samples collected at MW217, MW236S and MW232.
 - 0.1 µg/L for PFOA in select samples collected at MW217, MW122 and MW232.
 - 0.1 µg/L for PFOS+PFHxS in a sample collected at MW217.
 - 0.25 µg/L for PFOS+PFHxS and PFOA in a sample collected at MW124.
- In surface water samples, where concentrations of either PFOS+PFHxS or PFOA were reported <LOR, the LOR value was 0.01 µg/L in the majority of the samples, with the exception of the following:
 - 0.001 µg/L for PFOA in select samples collected at SW227, SW242, SW243, SW244 and SW245.
 - 0.5 µg/L for PFOA in a sample collected at SW243.
- Within each graph, if concentrations reported at multiple sample locations are equal (for instance where concentrations are reported as <LOR) the data points and lines associated with some sample locations may be obstructed by the datapoints and lines associated with another location, hence not visible in the graph. In such cases, the locations are still visible within the legend of the graph.

Historical groundwater and surface water concentrations by catchment area are displayed graphically in the **Section 1.0** and **Section 2.0**, respectively.

1.0 Introduction

1.1 Preamble

AECOM Australia Pty Ltd (AECOM) has prepared this Sampling and Analysis Quality Plan (SAQP) for the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program at Lavarack Barracks (the “Base”) and the Lavarack Barracks Management Area in the North Queensland Region, as defined in the *PFAS Management Area Plan (PMAP)*, (Department of Defence, 2020).

The SAQP supports the *PFAS Ongoing Monitoring Plan (OMP)* which was included in the *Lavarack Barracks PFAS Management Area Plan (PMAP)*.

The purpose of the OMP is to collect data to enable Defence to maintain an up to date understanding of the distribution, concentration and transport (migration pathways and flow) of PFAS at the Base and within the Management Area. The data will assist in the timely identification of risks and inform Department of Defence’s (Defence) approach to the management of PFAS, including updates and revisions to the PMAP.

1.2 SAQP Objectives

The objectives of this SAQP are to:

- Define the proposed scope of works in detail;
- Outline the proposed sampling methodology to be adopted;
- Outline the proposed data quality assurance and quality control (QA/QC) measures to be adopted; and
- Define the data collection requirements for the project.

1.3 Scope of Works

To meet the project objectives, the following scope of works are proposed as per the OMP for Lavarack Barracks (Department of Defence, 2020):

- Annual post-wet season sampling event March/April 2021, February/March 2022 and February/March 2023 including:
 - Groundwater sampling of 38 monitoring wells within the Management Area; and
 - Surface water sampling at 31 locations (provided water is present), co-located with sediment sampling within the Management Area.
- post-dry season sampling event in October 2020, August 2021 and August/September 2022 including:
 - Groundwater sampling of 38 monitoring wells; and
 - Surface water sampling at 31 locations (provided water is present), co-located with sediment sampling within the Management Area.
- Preparation of reports including a sampling event factual report (following each biannual sampling event) and annual interpretative reports following the completion of each 12-month sampling period.
- The sampling locations are presented in **Appendix A**.

1.4 Guidelines and Legislation

The SAQP has been developed with reference to the following guidelines and legislation:

- PFAS National Environmental Management Plan (NEMP) 2.0, Heads of Environmental Protection Agencies (HEPA), 2020.

- National Environment Protection (Assessment of Site Contamination) Measure (NEPM), National Environment Protection Council (NEPC), 2013.
- Commonwealth of Australia Department of Defence, Routine Environment Water Quality Monitoring Manual, 2018.
- Commonwealth of Australia Department of Defence, Contamination Management Manual (DCMM), 2018 amended June 2021.
- Department of Health (DoH), Health Based Guidance Values for PFAS for use in site investigations in Australia, September 2019.
- National Health and Medical Research Council (NHMRC), Guidance on PFAS in Recreational Water. August 2019.
- Standards Australia 1998, reconfirmed in 2016. AS/NZ 5667:1998 Water Quality – Sampling.
- Australian and New Zealand Guidelines, 2018. Australian and New Zealand Guidelines for Fresh and Marine Water Quality.
- Environmental Protection (Water and Wetland Biodiversity) Policy 2019.

2.0 Site Identification and Conceptual Site Model

2.1 The Base and Management Area

Lavarack Barracks is located in Townsville, North Queensland. The Base covers an area of approximately 740 hectares (ha) and is a large working, training, and accommodation facility, which houses the Australian Army 3rd and 11th Brigades. The Base contains numerous workshops, washdown bays, interceptor pits, battery storage areas, bulk fuel area/ oil storage and distribution facilities (Department of Defence, 2020).

The Management Area is defined by the Ross River (to the north), sub catchment to the east and west and Mount Stuart to the south. The Management Area includes surrounding the residential suburbs of Murray, Douglas, Annandale, Idalia, Onoonba and Wulguru, as shown in **Appendix B**.

2.2 Conceptual Site Model

The conceptual site model (CSM) for the Base and Management Area is presented in the Detailed Site Investigation (RPS/Wood, 2019) and referenced in the OMP which summarises the linkages between sources, pathways and receptors.

3.0 Data Quality Assessment

3.1 Data Quality Objectives

The amended National Environmental Protection Measure (NEPM, Schedule B [2]) Guideline on Site Characterisation (2013) specifies that the nature and quality of the data produced in an investigation will be determined by the Data Quality Objectives (DQOs). As referenced by the NEPM, the DQO process is detailed in the United States Environmental Protection Agency (US EPA) *Guidance on Systematic Planning Using the Data Quality Objectives Process (EPA QA/G-4: EPA/240/B-06/001), February 2006*.

The US EPA defines the process as ‘a strategic planning approach based on the Scientific Method that is used to prepare for a data collection activity. It provides a systematic procedure for defining the criteria that a data collection design should satisfy, including when to collect samples, where to collect samples, the tolerable level of decision errors for the study, and how many samples to collect’.

The process of establishing appropriate DQOs is defined according to the following seven steps:

Table 1 The seven steps in defining DQOs

Step	Data Quality Objective Step
1	State the problem – Define the problem that necessitates the study; identify the planning team, examine budget, schedule.
2	Identify the goal of the study – State how environmental data will be used in meeting objectives and solving the problem, identify study questions, define alternative outcomes.
3	Identify information inputs – Identify data and information needed to answer study questions.
4	Define the boundaries of the study – Specify the target population and characteristics of interest, define spatial and temporal limits, scale of inference.
5	Develop the analytic approach – Define the parameter of interest, specify the type of inference, and develop the logic for drawing conclusions from findings.
6	Specify performance or acceptance criteria – Develop performance criteria for new data being collected or acceptable criteria for existing data being considered for use.
7	Develop the plan for obtaining data – Select the resource-effective sampling and analysis plan that meets the performance criteria.

The approach adopted relative to the seven steps presented above is discussed below.

3.1.1 Step 1 – State the Problem

Defence and State agencies require up-to-date data to enable informed risk management decisions to protect human health and the environment, given that elevated concentrations of PFAS have been identified in environmental media. The primary pathway for the migration of PFAS off-Base is considered to be overland flow via surface drainage channels during seasonal rain events. Migration of PFAS from soils and surface water on-Base, to groundwater (via leaching / infiltration) and the subsequent transport downgradient as a plume via coarser grained sediments associated with paleochannels of the Ross River has also been identified as a potential pathway for off-Base migration of PFAS (Department of Defence, 2020).

Defence requires an understanding of the holistic effect of PFAS management response activities that have and will be implemented. The transport mechanisms for migration of PFAS are heavily influenced by seasonal variations and the SAQP sampling reflects the need to account for this seasonality.

The data collected by this SAQP will provide a detailed dataset that can be used to assist with assessment of temporal changes in PFAS concentrations in groundwater and surface water/sediment on-Base and off-Base. This will facilitate refinement of the CSM and associated risk, allow update of the

human health and ecological risk assessment and inform management decisions by Defence and government agencies.

3.1.2 Step 2 – Identify the Goal of the Study

The overall goal of the study is to establish a systematic routine groundwater and surface water/sediment sampling and analysis program which accounts for seasonal variations, to provide current and ongoing information on the distribution and migration of PFAS contaminants of potential concern in groundwater and surface water/sediment in the Management Area.

Specific goals of the program are to:

- Understand the changes and trends in the nature, extent and magnitude of PFAS concentrations in the groundwater, surface water and sediment within the Management Area between wet and dry season conditions;
- Understand if the nature, extent and magnitude of PFAS concentrations have changed significantly to warrant a revision to the human health and environmental risk assessments; and
- Understand if the nature, extent and magnitude of PFAS concentrations have changed significantly to warrant refinement of any existing management measures.

The decisions to be made based on the results of the investigation are:

- Do the analytical results and field observations allow for an assessment of risk(s) associated with complete or potentially complete PFAS source-pathway-receptor pathways?
- Do the analytical results and field observations allow for the interpretation of PFAS trends and do these trends warrant a re-evaluation of management actions?
- Does the OMP need to be refined to address uncertainty and would such a change(s) result in greater efficacy with respect to ongoing management or future intervention.

Note: a single trigger value for the reassessment of risk is not considered appropriate for the Management Area and a weight of evidence approach is to be adopted for reassessment of risk.

3.1.3 Step 3 – Identify Information Inputs

To allow assessment of the data against the study goal listed in Step 2 above, the following inputs will be considered:

- Physical setting of the Base;
- PFAS results, water levels and field observations from previous investigations;
- Meteorological data including rainfall;
- Field observations;
- Groundwater, sediment and surface water data collected and analysed for PFAS to assess the distribution and extent of PFAS, as part of this SAQP;
- Groundwater and surface water elevation data;
- Fate and transport mechanisms and behaviour of PFAS in the environment;
- Screening criteria (refer **Section 4.10**);
- Statistical analysis to identify trends;
- Advances in laboratory analytical approaches and changes in regulatory requirements; and
- Recommendations made in the preceding Sampling Event Factual Reports completed by AECOM:
 - Sampling Event Factual Report, October 2020- PFAS Ongoing Monitoring Program- Lavarack Barracks, Townsville, QLD (AECOM, 2021a).
 - Sampling Event Factual Report, March/April 2021 - PFAS Ongoing Monitoring Program- Lavarack Barracks, Townsville, QLD (AECOM, 2021b).

- Sampling Event Factual Report, August 2021 - PFAS Ongoing Monitoring Program- Lavarack Barracks, Townsville, QLD (AECOM, 2021c).
- Sampling Event Factual Report, March/April 2022 - PFAS Ongoing Monitoring Program- Lavarack Barracks, Townsville, QLD (AECOM, 2022).

3.1.4 Step 4 – Define the Boundaries of the Study

The spatial and temporal boundaries that apply for data collection are detailed below and will influence the decision-making process for ongoing monitoring:

- The spatial boundary for data collection and decision making is the Base and the wider Management Area. Three sampling locations are located in the Ross River to assist determination of base load of PFAS in Ross River. Refer to **Appendix A** for all sampling locations.
- The sampling completed as part of the SAQP includes groundwater, sediment and surface water, at the frequencies defined in **Section 4.3** to account for seasonality.
- The monitoring will be undertaken initially for three years (as outlined in the OMP, Department of Defence, 2020) followed by a review to assess the need for ongoing monitoring.

The SAQP will also cover the initial implementation period of the OMP (Department of Defence, 2020). The SAQP will also cover the extent required by specific characteristics of the Base and surrounds, and behaviour of the plume, measured against specified data trends.

3.1.5 Step 5 – Develop the Analytical Approach

The decision rules can be defined as:

- Analytical selection; all samples will be analysed for the extended PFAS suite.
- Analytical method selection for PFAS is based on achieving appropriate laboratory limit of reporting (LOR) in the various media to be analysed. Standard LORs will be used for the OMP Implementation.
- Sample locations have been selected with the objective of monitoring PFAS trends (temporal and seasonal), providing early warning of changes in the migration of PFAS in surface water and groundwater.
- If the laboratory quality assurance/quality control data are within the acceptable ranges, the data will be considered suitable for use.
- If PFAS concentrations are reported above the laboratory LOR, where it was previously <LOR, then it will be considered whether further assessment of the data is required.
- If PFAS is reported at a concentration that is consistently above the adopted screening criteria, then it will be considered that further assessment is required.
- If PFAS is reported at a concentration that is inside a trigger value or acceptable range, then it will be considered whether monitoring is continued or reduced, this assessment will be undertaken after three years of monitoring.

The decision on the acceptance of the analytical data will be made on the basis of the Data Quality Indicators (DQIs) as follows:

- **Precision:** A quantitative measure of the variability (or reproducibility) of data.
- **Accuracy:** A quantitative measure of the closeness of reported data to the “true” value.
- **Representativeness:** The confidence (expressed qualitatively) that data are representative of each media present on site.
- **Completeness:** A measure of the amount of useable data from a data collection activity.
- **Comparability:** The confidence (expressed qualitatively) that data may be considered to be equivalent for each sampling and analytical event.

Table 2 provides further specific details.

3.1.6 Step 6 – Specify Performance or Acceptance Criteria

Specific limits for the works included in the OMP (Department of Defence, 2020) are in accordance with the appropriate guidance made or endorsed by state and national regulations, appropriate indicators of data quality, and standard procedures for field sampling and handling.

This step also examines the certainty of conclusive statements based on the available new data collected. This should include the following points to quantify tolerable limits:

- A decision can be made based on a certainty assumption of 95% confidence in any given data set. A limit on the decision error will be 5% that a conclusive statement may be a false positive or false negative.
- A decision error in the context of the decision rule presented above would lead to either underestimation or overestimation of the risk level associated with a particular sampling area.
- Sampling errors may occur when the sampling program does not adequately detect the variability of a contaminant from point to point across the Base. To address this, the OMP outlines minimum numbers of samples proposed to be collected from each media.
- As such, there may be limitations in the data if aspects of the OMP cannot be implemented. Some examples of this scenario include but are not limited to:
 - Proposed surface water sample locations may be dry at the time of sampling.
 - Proposed groundwater well locations are damaged or destroyed and therefore cannot be sampled.
 - Proposed samples are not collected due to access being restricted to a given location.
- Measurement errors can occur during sample collection, handling, preparation, analysis and data reduction. To address this the following measures are proposed:
 - Collection of sufficient sample mass to facilitate analysis reported to standard laboratory detections limits. Collection of insufficient sample mass may result in raised detection limits.
 - Field staff to follow a standard procedure when collecting samples, including decontamination of tools, and use of appropriate sample containers and preservation methods.
 - Laboratories to follow a standard procedure when preparing samples for analysis and undertaking analysis. LOR may be increased for saline samples due to matrix interference for higher salinity samples.
 - Laboratories to report quality assurance/ quality control data for comparison with the DQIs established for the SAQP.
- **Table 2** provides acceptance criteria.

3.1.7 Step 7 – Optimise the Design for Obtaining Data

The methodology presented in this SAQP is designed to meet the project objectives described in **Section 1.2** and to achieve the nominated DQOs. Optimisation of the data collection process will be achieved by:

- Working closely with the analytical laboratories and sampling equipment suppliers to ensure that appropriate procedures and processes are developed and implemented prior to and during the fieldwork, to ensure that sample handling, and transport to and processing by the analytical laboratories is appropriate.
- Conducting sampling according to Defence and Australian Standards for the type of sampling being conducted (i.e. groundwater monitoring well sampling versus landholder bore water sampling). These standards are as follows:
 - Department of Defence (March 2018, Amended June 2021), *Contamination Management Manual*.
 - Standards Australia (AS/NZS5667.11–1998) *Water Quality – Sampling, part 11: Guidance on sampling of groundwater*.

- Standards Australia (AS 4482.1-2005) *Guide to the sampling and investigation of potentially contaminated soil. Part 1: Non-volatile and semi-volatile compounds.*
- Standards Australia (AS 4482.2-1999) *Guide to the sampling and investigation of potentially contaminated soil, Part 2: Volatile Substances.*
- Conducting sampling in accordance with AECOM's internal PFAS Sample Collection Guidance.
- Sampling conducted by suitably qualified and experienced field staff.
- Basing the sampling upon a CSM developed using the information available at the implementation of the SAQP. Updating the CSM as new data becomes available in the course of the implementation of the SAQP, as required; and
- Progressive review of the data throughout the initial three-year OMP period and modification of sampling programs to optimise the value of data generated.

If the objectives of the SAQP are not being met, the sampling design and approach will be reviewed and amended, as required.

3.2 Assessment of Data Quality

The quality of data collected as part of the sampling will be assessed on a range of factors including:

- Documentation and data completeness; and
- Data quality – comparability, representativeness, precision and accuracy of the analytical data.

The project target for data completeness is to achieve 95% of data as suitable for use.

The acceptance criteria for DQIs for samples are specified in **Table 2**.

Table 2 Acceptance Criteria for Data Quality Indicators for Sample Analysis

Data Quality Indicators	Acceptance Criteria
Water and Sediment Samples	
Rinsates (where sampling equipment is reused)	Less than the laboratory LOR.
Field duplicates/Inter-lab duplicates	The relative percentage difference (RPD)s will be assessed as acceptable if less than or equal to 30% as per the NEPM Schedule B3. Where the results shows greater than 30% difference a review of the cause will be conducted (NEPM, 2013). It is noted that RPDs that exceed this range may be considered acceptable where: <ul style="list-style-type: none"> • Results are less than 10 times the LOR (no limit); • Results are less than 20 times the LOR and the RPD is less than 50%; and • Heterogeneous materials are encountered.
Laboratory duplicates	RPDs less than: <ul style="list-style-type: none"> • 20% for high level laboratory duplicates (i.e. >20 x LOR); and • 50% for medium level laboratory duplicates (i.e. 10 to 20 x LOR).
Matrix spikes	Recoveries between 70-130% of the theoretical recovery or as nominated in the laboratory's QC report, based on their historical database.
Method blanks	Less than the laboratory LOR.
Laboratory control samples	Recoveries between laboratories specified range for each particular analyte/analytical suite.

4.0 Sampling Location Rationale and Methodology

4.1 OMP

The OMP (Department of Defence, 2020) presents an overview of specific monitoring works to be undertaken and provides the basis for the preparation of this SAQP. The scope of works presented in this SAQP is consistent with that detailed in the OMP.

4.2 Proposed Schedule

4.2.1 Sampling Events

Groundwater, sediment and surface water sampling across the Management Area will be performed biannually with wet season sampling in February/March and a dry season sampling in August/September for an initial period of three years, with the initial sampling event completed in October 2020. In the event that the wet season is delayed, the sampling round will be conducted in March/April.

The proposed schedule of fieldworks across the initial three-year period is presented in **Table 3** below.

Table 3 Proposed Fieldwork Schedule

Sampling Round No.	Description of works	Proposed Schedule
1	Dry season groundwater, sediment and surface water sampling	October 2020
2	Wet season groundwater, sediment and surface water sampling	March/April 2021
3	Dry season groundwater, sediment and surface water sampling	August 2021
4	Wet season groundwater, sediment and surface water sampling	February/March 2022
5	Dry season groundwater, sediment and surface water sampling	August/September 2022
6	Wet season groundwater, sediment and surface water sampling	February/March 2023

4.3 Sample Location Rationale

4.3.1 Groundwater Sampling Locations Rationale

There are 38 groundwater monitoring wells identified for ongoing monitoring. These wells are located across the Base, Base boundary, Townsville City Council controlled public spaces, and one location on a private property. Stakeholder permission is required to access and sample MW226. No formal permits are required for collection of environmental samples under this SAQP.

The rationale for monitoring well selection for each area is summarised in **Table 4**.

Table 4 Rationale for Groundwater Monitoring Locations

Area	Rationale
On-Base	Sampling points have been selected both within and down-gradient of the identified source areas, to monitor the change in PFAS concentrations at each source area and confirm the level of risk identified in the DSI.
Base Boundary	The Base boundary sampling points act as 'sentinels' for potential changes in PFAS concentrations in ground water in the Off-Base Management Area. These points are considered critical to the understanding of risk to sensitive receptors in the Off-Base Management Area.
Off-Base	<ul style="list-style-type: none"> Sampling locations within the Off-Base Management Area have been selected to assess the key PFAS migration pathways. Confirm the understanding of risk and provide additional data points for use in determining both seasonal and longer-term trends in PFAS migration via pathways identified during the DSI.

4.3.2 Groundwater Gauging Locations

All locations are proposed to be gauged prior to each sampling event and are presented in **Figure 1**, in **Appendix A**.

4.3.3 Groundwater Sampling Locations

The groundwater locations to be monitored as part of the wet and dry season sampling events are provided in Table 5 below and are presented in **Figure 1**, in **Appendix A**. Stakeholder access permission in the form of a Training Area Safety and Management Information System booking with Mount Stuart Training Area Range Control is required for access to MW124, MW125I, MW125S.

Table 5 Groundwater sampling locations

Management/Source Area	Wells	Number of wells
Eastern PFAS Contamination Area	MW018, MW114, MW115, MW116, MW139	5
Former B Squadron	MW135	1
Former Fire Training Area	MW105, MW128, MW131	3
Former Helicopter Squadron	MW102	1
Lavarack Golf Course & Sporting Field	MW065, MW120, MW121, MW122, MW123S, MW123I	6
Monocell	MW072 ¹ , MW074 ¹ , MW106	3
Stockpile Designated Area 2	MW141	1
Suspected AFFF Disposal Area	MW101	1
Top, Middle and Lower Dams	MW138	1
Base Boundary	MW002 ¹ , MW003 ¹ , MW118 ¹ , MW119 ¹ , MW124, MW125I, MW125S	7
Off-Base	MW205S, MW212, MW217, MW220S, MW226, MW232, MW233, MW235S, MW236S	9
	Total	38

¹ Locations conflicting with the Water Quality Monitoring Program

4.3.4 Sediment Sampling Locations Rationale

The sediment locations to be monitored as part of the wet and dry season sampling events are provided in **Table 6** below and are presented in **Figure 2, Appendix A**. Stakeholder access permission is required to access and sample SW/SD211 and SW/SD212 which are located on private property. These locations have been selected to maintain consistency with the recent monitoring completed within the Management Area.

4.3.5 Sediment Sampling Locations

Table 6 Sediment sampling locations

Management/Source Area	Sampling locations	Number of locations
Eastern PFAS Contamination Area	SD119, SD121	2
Former Fire Station	SD109, SD110	2
Lavarack Golf Course & Sporting Field	SD129, SD130	2
Top, Middle and Lower Dams	SD139, SD140, SD144	3
On-Base Balance	SD113, SD120	2
Base Boundary	SD126, SD128, SD132, SD133, SD134, SD135, SD136	7
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245	13
Total		31

4.3.6 Surface Water Sampling Locations Rationale

The surface water locations to be monitored as part of the wet and dry season sampling events are provided in **Table 7** below and are presented **Appendix A, Figure 2**. Stakeholder access permission is required to access and sample SW/SD211 and SW/SD212 which are located on private property. These locations have been selected to maintain consistency with the recent monitoring completed within the Management Area. Surface water locations are co-located with sediment sampling locations, and surface water will be collected where present.

4.3.7 Surface Water Sampling Locations

Table 7 Surface water sampling locations

Management/Source Area	Sampling locations	Number of locations
Eastern PFAS Contamination Area	SW119, SW121	2
Former Fire Station	SW109, SW110	2
Lavarack Golf Course & Sporting Field	SW129, SW130	2
Top, Middle and Lower Dams	SW139, SW140, SW144	3
On-Base Balance	SW113, SW120	2
Base Boundary	SW126, SW128, SW132, SW133, SW134, SW135, SW136	7
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245	13
Total		31

4.4 Sample Collection and Handling

4.4.1 Groundwater Sampling

The groundwater sampling methodology and schedule are presented in **Table 8**.

Table 8 Groundwater sampling methodology and schedule

Item	Details
Groundwater gauging	<p>The depth to groundwater will be measured at the beginning of each sampling round, commencing with on Base wells and moving to off-Base locations and finishing with tidally influenced wells along Ross River and Idalia Lakes. All wells associated with the OMP are proposed to be gauged within the same day.</p> <p>Groundwater wells will also be gauged immediately prior to the collection of groundwater samples.</p>
Sample Collection Methodology	<p>Groundwater samples will be collected from all monitoring wells using no-purge methodology HydraSleeves™, which will be installed within the screened interval of the wells approximately 1 m above the base of the well for a minimum of 24 hours prior to the sampling round. Well construction details are presented in Appendix C.</p> <p>Once sampling is completed, new HydraSleeves™ will not be redeployed due to conflicts with other monitoring programs, potential presence of tree roots and loss of sampling equipment over the life of the program. Instead, HydraSleeves™ will be deployed during the gauging round at the beginning of the program and collected following a period of no less than 24 hours. A decontaminated steel bailer is to be used where insufficient water volume is able to be collected using HydraSleeves™.</p>
Field Parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality will be recorded for all groundwater samples.</p>
Sampling Schedule	<p>The monitoring across the investigation area will include two sampling events, as detailed below:</p> <p>Wet Season: 38 monitoring wells across the Base and surrounding areas. Dry Season: 38 monitoring wells across the Base and surrounding areas.</p>

4.4.2 Sediment Sampling

The sediment sampling methodology and schedule are presented in **Table 9**.

Table 9 Sediment sampling methodology and schedule

Item	Details
Sample Collection Methodology	Samples representative of potentially deposited sediments will be collected from within the water body if possible. Sediment samples will be collected using a trowel or gloved hand, where possible, or a sludge and sediment sampler. At each location, a new laboratory supplied container will be used for each sample.
Sampling Schedule	Sediment sampling will be conducted at 31 locations during both the wet and dry season sampling events.

4.4.3 Surface Water Sampling

The surface water sampling methodology and schedule are presented in **Table 10**.

Table 10 Surface water sampling methodology and schedule

Item	Details
Sample Collection Methodology	Samples to be collected from immediately below the water surface to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory supplied container will be lowered into the water with the cap immediately applied once the container is full. Where the waterway cannot be accessed from the bank a telescopic sampler with a stainless-steel scoop will be used to collect the sample. Where required, a boat will be used to access some locations of the Ross River. The sample will then immediately be transferred into the new laboratory supplied container.
Field Parameters	Temperature, EC, DO, ORP, pH and observations of water quality will be recorded for all surface water samples.
Sampling Schedule	Surface water sampling will be conducted at 31 locations during both the wet and dry season sampling events. Samples collected will depend on the availability of water within the waterway.

4.4.4 Laboratory Analysis and Quality Assurance/Quality Control Sampling

The following QA/QC sampling and laboratory analysis will be conducted for all samples as outlined in the table below.

Table 11 Laboratory Analysis and QA/QC Sampling

Item	Details
QA/QC samples to be collected	Field QA/QC samples are to include intra-laboratory duplicate and inter-laboratory duplicate, trip blank and equipment rinsate blank (rinsate) samples. Duplicate samples are to be collected at a minimum frequency of 1 in 10 primary PFAS samples. Laboratory supplied trip blanks will be included at a rate of one per batch of samples (excluding private property sampling) and will be prepared by filling sample containers with laboratory supplied PFAS free deionised water. Rinsate samples are to be collected at a rate of one sample per day of sampling when non-dedicated equipment is used by pouring laboratory supplied PFAS free deionised water over the decontaminated sampling equipment. Additional sample volume is required to be collected to enable the appropriate laboratory QA/QC for all water samples.
Sample Analysis	All primary samples will be submitted for PFAS extended suite using the standard levels of detection.

4.4.5 Sample Handling and Transport to Laboratory

AECOM personnel will attempt to reduce heterogeneity in the sample media matrix by dividing the sample collected between primary and inter/intra-laboratory jars or bottles during sampling. All samples will be placed on ice in eskies immediately after sampling.

All samples will be kept, if possible, at or below 4°C during transit to the laboratory. Prior to sampling, assessment of the analytical holding times will be made, and the sampling planned accordingly to help ensure that holding times are not breached or are minimised as far as practicable.

Samples will be transported to the laboratory for analytical testing under standard Chain of Custody (CoC) documentation. Primary and associated duplicate QA/QC samples will be analysed by Australian Laboratory Services (ALS) Brisbane. The inter-laboratory duplicate samples will be analysed by Eurofins Environment Testing Australia Pty Ltd (Eurofins) in Brisbane.

4.5 Calibration

The water quality meter will be calibrated each day of use prior to the commencement of field activities with relevant solutions, including pH, DO, EC and ORP. The calibration will be in accordance with manufacturers' instructions or NATA publication "General Requirements for Registration: Supplementary Requirement: Chemical Testing (NATA 1993) and Technical Note N0. 19 (NATA 1994)". Where satisfactory calibration cannot be achieved, the water quality data will not be used for interpretive purposes.

Calibration details will be recorded on field sheets and included in the Sampling Event Factual Reports.

4.6 Logistics

The laboratory sample containers will be collected from the laboratory prior to the commencement of fieldwork. All primary and duplicate samples will be transported to ALS Townsville by the field team for forwarding to Brisbane. All inter-laboratory duplicate samples will be couriered directly to the secondary laboratory (Eurofins Brisbane) under a separate CoC documentation for analysis.

4.7 Analytical Suite and Laboratory Analysis Methods

4.7.1 Laboratory NATA Accreditation Details

The laboratory is required to use NATA accredited methods based on NEPM, US EPA, Table B 15 of the US Department of Defence/Department of Energy (US DOD/DoE) and American Society for Testing and Materials (ASTM) methods as appropriate.

The primary and secondary laboratories selected for this program are ALS (NATA Accreditation Number 825) and Eurofins (NATA Accreditation Number 1261), respectively.

4.7.2 Analytical Schedule

All media sampled shall be analysed for the extended PFAS suite with standard LOR as outlined in **Table 12** below.

Table 12 Sample Analytical Suite for PFAS

PFAS Group	Compound	CAS No.
Perfluoroalkyl Sulfonic Acids	Perfluorobutane sulfonic acid (PFBS)	375-73-5
	Perfluoropentane sulfonic acid (PFPeS)	2706-91-4
	Perfluorohexane sulfonic acid (PFHxS)	355-46-4
	Perfluoroheptane sulfonic acid (PFHpS)	375-92-8
	Perfluorooctane sulfonic acid (PFOS)	1763-23-1
	Perfluorodecane sulfonic acid (PFDS)	335-77-3
	Perfluorobutanoic acid (PFBA)	375-22-4

PFAS Group	Compound	CAS No.
Perfluoroalkyl Carboxylic Acids	Perfluoropentanoic acid (PFPeA)	2706-90-3
	Perfluorohexanoic acid (PFHxA)	307-24-4
	Perfluoroheptanoic acid (PFHpA)	375-85-9
	Perfluorooctanoic acid (PFOA)	335-67-1
	Perfluorononanoic acid (PFNA)	375-95-1
	Perfluorodecanoic acid (PFDA)	335-76-2
	Perfluoroundecanoic acid (PFUnDA)	2058-94-8
	Perfluorododecanoic acid (PFDoDA)	307-55-1
	Perfluorotridecanoic acid (PFTrDA)	72629-94-8
	Perfluorotetradecanoic acid (PFTeDA)	376-06-7
Perfluoroalkyl Sulfonamides	Perfluorooctane sulphonamide (FOSA)	754-91-6
	N-Methyl perfluorooctane sulfonamide (MeFOSA)	31506-32-8
	N-Ethyl perfluorooctane sulfonamide (EtFOSA)	4151-50-2
	N-Methyl perfluorooctane sulfonamidoethanol (MeFOSE)	24448-09-7
	N-Ethyl perfluorooctane sulfonamidoethanol (EtFOSE)	1691-99-2
	N-Methyl perfluorooctane sulfonamidoacetic acid (MeFOSAA)	2355-31-9
	N-Ethyl perfluorooctane sulfonamidoacetic acid (EtFOSAA)	2991-50-6
(n:2) Fluorotelomer Sulfonic Acids	4:2 Fluorotelomer sulfonic acid (4:2 FTS)	757124-72-4
	6:2 Fluorotelomer sulfonic acid (6:2 FTS)	27619-97-2
	8:2 Fluorotelomer sulfonic acid (8:2 FTS)	39108-34-4
	10:2 Fluorotelomer sulfonic acid (10:2 FTS)	120226-60-0

The current standard laboratory limits of reporting (LOR) are described in **Table 13** below.

Table 13 Laboratory Limits of Reporting

Sample Media	Parameter	Technique/Method Reference	LOR*
Groundwater and Surface Water	Extended PFAS Suite	LC/MS-MS	0.01 – 1.0 µg/L
Sediment	Extended PFAS Suite	LC/MS-MS	0.0002 – 0.001 mg/kg

LC/MS-MS = Liquid chromatography–mass spectrometry

*LOR for Australian Laboratory Services (ALS)

4.8 Sample Nomenclature

In order to meet Defence data management requirements, a consistent sample nomenclature has been adopted for the Program. All primary samples will be labelled using the following DCMM naming convention:

PPPP_XX000_YYMMDD

[property ID]_[type of sample][THREE DIGIT sample number]_[yearmonthday]

e.g. 0229_MW001_200401

Location types and codes are prescribed by Defence and the investigation history.

Primary Sample Types/Location Codes relevant to this OMP include:

- MW = monitoring well
- SW = surface water - no depth required
- SD = sediment – no depth required as all sediment samples will be from surface.

QA/QC Samples will be labelled in accordance with the following convention:

- Duplicate: PPPP_QC1XX_YYMMDD
- Triplicate: PPPP_QC2XX_YYMMDD
- Rinsate: PPPP_QC3XX_YYMMDD
- Trip Blank: PPPP_QC5XX_YYMMDD.

4.9 Defence ESdat Requirements

Defence has contracted Earth Science Information Systems (ESclS), to provide contamination data management services through a cloud instance of its ESdat product.

All OMP field and laboratory data collected by AECOM will be uploaded, stored and managed in Defence's ESdat database in accordance with Section 6 of DCMM Annex L (Department of Defence, 2018, amended June 2021). AECOM will refer to historical investigation data to ensure consistent location codes are used to enable analysis of data trends. Where required under Annex L, non-compliant location codes will be resolved under direction from Defence.

AECOM will upload the data from each sampling event into ESdat prior to submitting the Sampling Event Factual Report.

4.10 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance.

At the time of preparing this SAQP, a number of guidance documents were in circulation in Australia including:

- PFAS National Environmental Management Plan (NEMP), (HEPA 2020).
- Department of Health (DoH), 2019. Health Based Guidance Values for PFAS for use in site investigations in Australia. April 2017 [updated September 2019] (FSANZ 2017).
- National Health and Medical Research Council (NHMRC), 2019. Guidance on PFAS in Recreational Water. August 2019 (NHMRC 2019).
- National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM).

The adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 14** below.

Table 14 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Off-Base - Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP, 2020
	PFOA	0.56 µg/L	<i>Off-Base groundwater results will be compared to these criteria. Only surface water results from SW245 will be compared to these criteria. This is the only surface water location within the emergency drinking water supply for Townsville and is upgradient of Blacks Weir and not tidally influenced.</i>
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP, 2020
	PFOA	10 µg/L	<i>All surface water and groundwater results will be compared to these criteria.</i>
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP, 2020 <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

There are no current HEPA (2020) endorsed guideline values for PFAS in sediment.

4.11 Waste Management

Due to the proposed “no purge” sampling methodology, it is not anticipated that significant volumes of liquid waste would be generated that would require management or disposal.

Wastewater generated will be collected in a plastic drum for disposal by a licenced contractor disposed back to the well that it came from or discharged to ground directly adjacent to the well in grassed areas.

No waste soil will be generated due to the proposed grab sampling approach.

All consumables (i.e. HydraSleeves™, general rubbish) will be bagged and placed in general waste bins for disposal.

4.12 Quality Assurance/Quality Control Sampling

4.12.1 Field Duplicate and Inter-laboratory Duplicate Samples

Field duplicate (intra-laboratory) samples and triplicate (inter-laboratory field duplicates) for PFAS analysis will be collected and analysed at a minimum frequency of 1 in 10 primary samples.

4.12.2 Rinsate Samples

Rinsate samples are to be collected at a rate of one sample per fieldwork day by pouring laboratory supplied deionised water over the decontaminated sampling equipment.

4.12.3 Trip Blank Samples

Trip blank samples, for water, will be supplied by the laboratory and placed in the eskies used to transport the samples at a rate of one per batch of samples delivered to the laboratory. The trip blank samples will be analysed for PFAS to assess if any contaminants have entered the sample containers in transit to the laboratory or within the container itself.

4.13 Fieldwork Documentation

4.13.1 Field Notes

Field notes will be collected electronically and maintained to record all field sampling events and include observations made at each sample location. Field notes will include information specific to the sample media as follows:

- Groundwater gauging and sampling- date and time of gauging, HydraSleeve™ installation and sampling will be recorded at each sampling location.
- Groundwater and surface water samples – comments on the observed characteristics of the sample (e.g. colour, turbidity, odour, sheen) and reported field water quality parameters (pH, EC, DO, ORP, temperature) will be recorded; and
- Sediment and surface water samples - comments on the morphology of the sample location, the depth, flow direction and strength of water flow (if water is present), the water and sediment/soil colour and odour, and the presence of flora and fauna. The soil/sediment types observed at each sample location will be described using the Unified Soil Classification System (USCS).

The coordinates for each sample location will be noted. The location of quality control (e.g. duplicate and inter-laboratory duplicate) sample collection points will also be noted.

AECOM's tablet-based data capture ('EDCA') system will be utilised by field staff to minimise potential data recording errors and allow on-the-spot identification of potentially erroneous data in comparison to historical data.

4.13.2 Sample Labels

AECOM will utilise the tablet-based ALS 'Compass' sample management application to streamline sample labelling and chain of custody (CoC) creation to ensure compliant sample IDs are used in the field.

Sample containers will also be labelled with the sample ID as a failsafe method.

A ball point pen will be used for labelling, to ensure PFAS is not introduced to the samples from permanent markers.

4.13.3 Chain of Custody Forms

A CoC form will be completed, documenting the sample identification number and analytes. The CoC documents the chain of events from sample collection to delivery at the laboratory and provides a traceable account of sample handling. The CoC form will be signed by both the sample collector and the receiving laboratory. The CoC will be generated electronically using the ALS Compass application to reduce potential transcription errors.

The CoC form will include the following information:

- Job number (Note: the name of the Base is not identified for confidentiality purposes);
- Defence ESdat database reference (i.e. QLD_0229_PFASOMP_20);
- Date and time of sample collection;
- Sample ID;
- Type of containers;
- Name of sampler;
- Laboratory to be used;
- Analyses required;
- Any comments; and
- Signatures of the sampler and laboratory receiver.

In the event that additional samples are collected during the field investigations due to observations made by the Field Team, (i.e. samples not proposed in this SAQP), Defence will be provided the rationale for collection of those samples and proposed laboratory analyses. Defence approval will be sought to include these samples on the CoC and to dispatch these samples to the laboratory.

Upon receipt of the original documents accompanying the samples at the laboratory, the laboratory will provide a sample receipt document (noting the temperature of samples upon receipt, analyses required and any non-conformances) and return the signed CoC form to confirm analyses to be performed and the due date for the analytical results.

4.13.4 Sampling Documentation

Field sampling sheets will be completed for each location, and will include the following information (as appropriate for the media being sampled):

- Name of sampler;
- Sample location;
- Date /time of monitoring/ sampling;
- Sampling method;
- Observations of the sampled media; and
- Calibration records.

Records of all equipment calibration will be included in the Sampling Event Factual Reports. Photographs of surface water sampling locations will be taken where permitted.

4.14 Reporting

4.14.1 Sampling Event Factual Report

No later than four weeks following receipt of the laboratory reports, AECOM will prepare and submit a Sampling Event Factual Report to Defence. Each Sampling Event Factual Report will include:

- Details of the scope of monitoring completed;
- A description of the sampling methodologies used;
- A summary of observations made while sampling (e.g. recent weather conditions, any visual or olfactory observations that may indicate impacts to surface water or groundwater, or any estate management works or training activities that may have the potential to impact sampling or data);
- A summary of any changes to the monitoring network condition that may affect data integrity, or require rectification works, and recommendations for repair, replacement or decommissioning of a location;
- A presentation of the analysis results in a table that includes comparisons with PFAS guidelines, highlighting any significant statistical deviations from historical monitoring and investigation data, and identifying any locations with first-time detections of PFOS + PFHxS or PFOA or new exceedances of guideline values;
- A presentation of the relative groundwater levels for the event on a figure with inferred contours and inferred groundwater flow direction;
- Discussion of the analytical data quality, including review of the quality control sampling results and laboratory quality control data; and
- Inclusion of the following information as attachments:
 - Figures;
 - Tables;
 - Sampling logs and forms including field water quality parameter measurements;

- Chain of custody forms;
- Laboratory analytical certificates and QA/QC reports; and
- Equipment calibration certificates.

4.14.2 Annual Interpretive Report

At the end of each 12-month monitoring period, AECOM will prepare and submit an Annual Interpretive Report to Defence. Each Interpretive Report will include:

- Evidence of compliance with the requirements of the SAQP and meeting stated objectives of the OMP (Department of Defence, 2020);
- Relevant figures depicting sampling locations and site-specific hydrogeological features;
- Laboratory results and analysis including comparison with relevant screening criteria as identified in the OMP (Department of Defence, 2020);
- Assessment and commentary on appropriate QA/QC procedures;
- A review of the CSM and provision of a revised CSM if required;
- Data interpretation, including trends in groundwater concentration, gradient and flow directions;
- Assessment of statistically based trends that may inform decision making when it comes to the revision of the OMP (Department of Defence, 2020); and
- A statement as to whether the risk profile has changed overall, or for any specific location on the Base or within the Management Area, and a recommendation as to whether this should trigger an OMP and/or PMAP review, or other action.

4.15 Deviation from OMP

While the scope of works and methodology described in this SAQP are generally consistent with that presented in the OMP (Defence, 2020), deviations as a result of subsequent sampling events may occur as a result of review of recommendations made in the Sampling Event Reports (AECOM, 2021a) (AECOM, 2021b), (AECOM, 2021c) and (AECOM, 2022).

During the October 2020 Dry Season Sampling Event surface water sample location SW150 described in the OMP as being from a tap, could not be located and an appropriate location for sampling was unable to be identified. This location has not been sampled to date and has been removed from the SAQP.

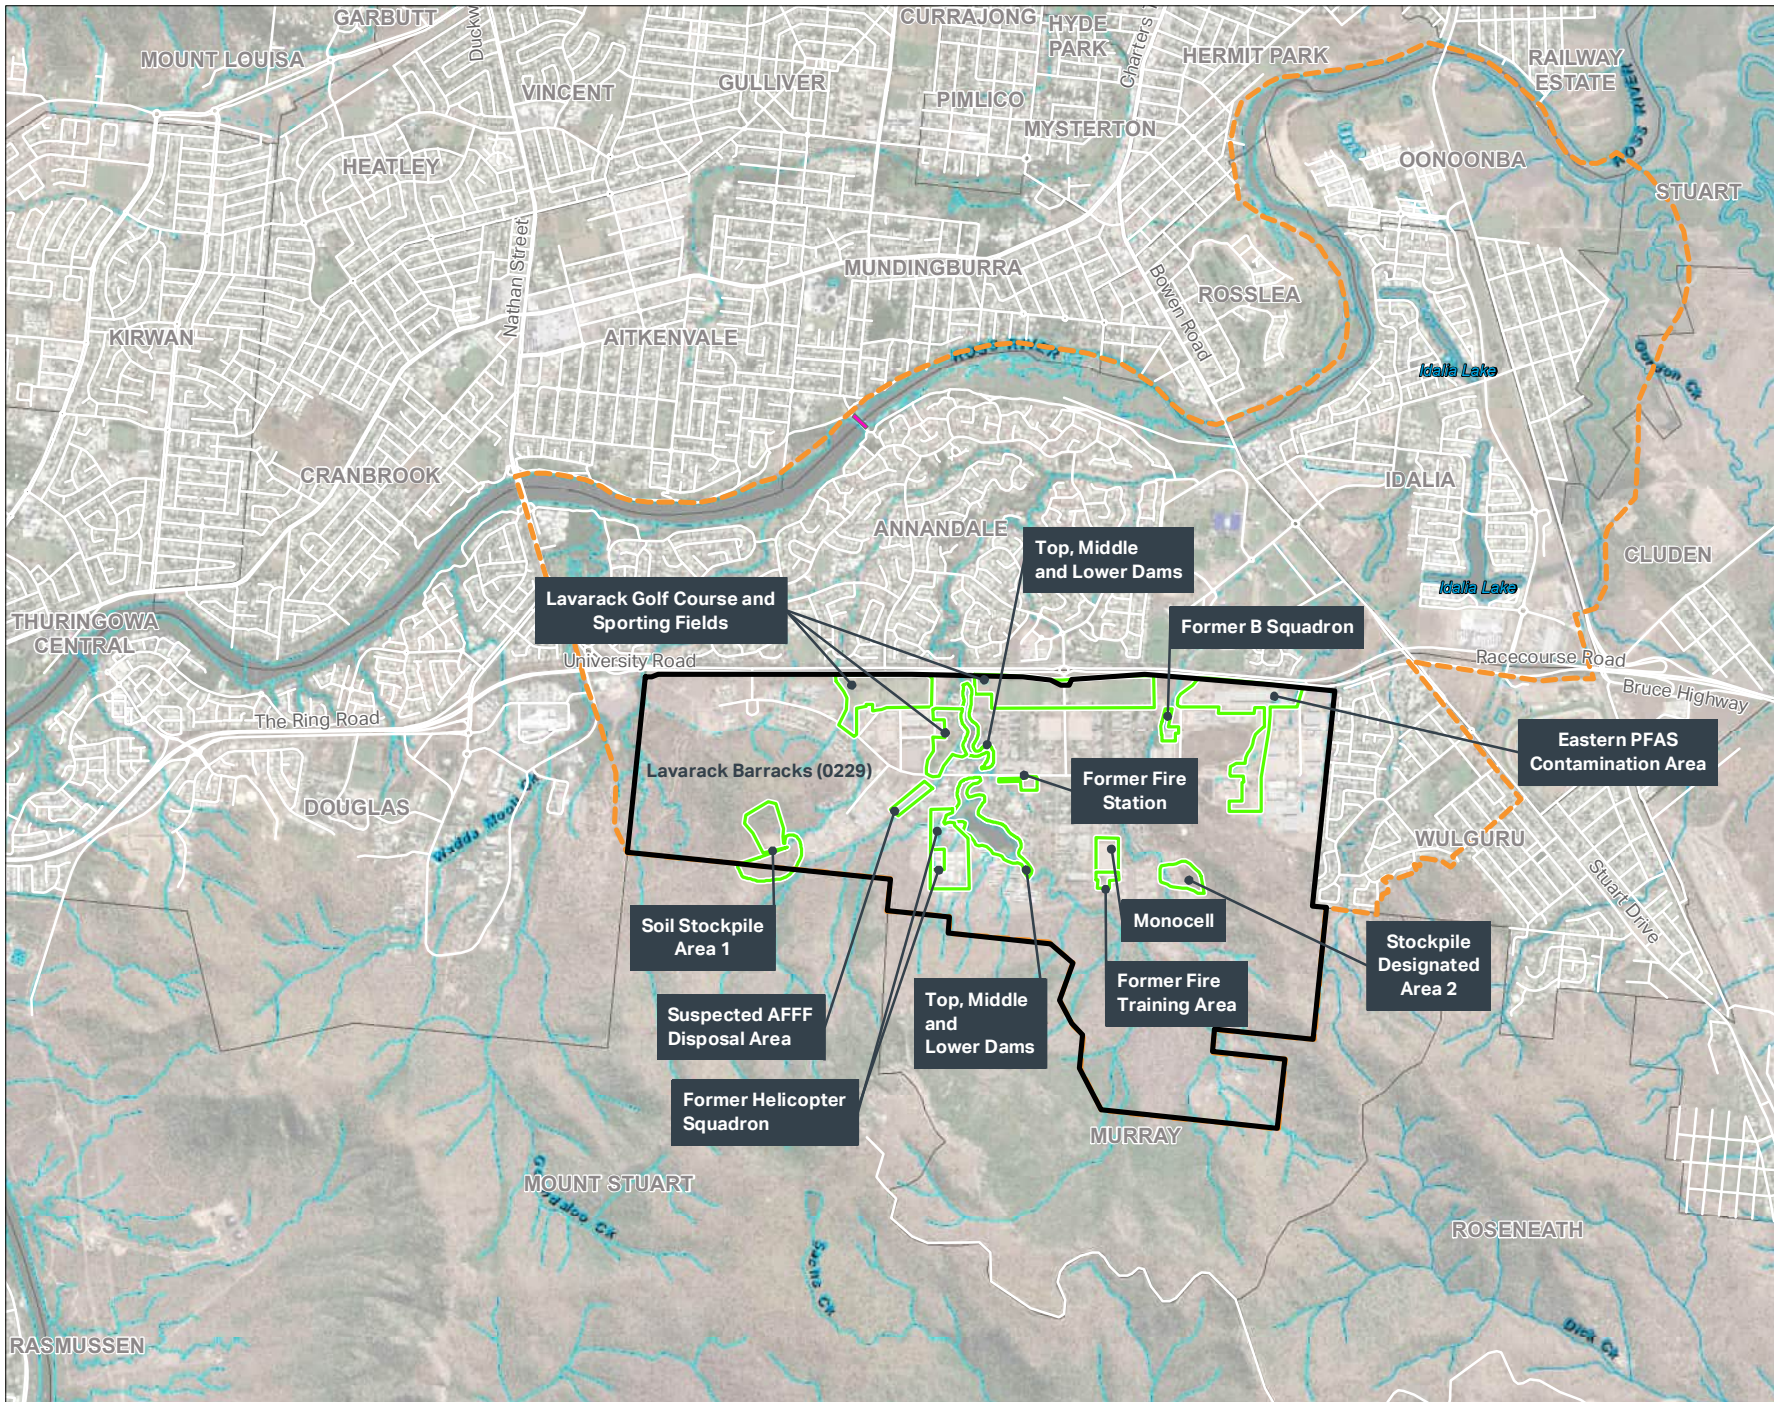

During the April 2022 Sampling Event monitoring well sample locations MW117D and MW117S were damaged by construction works and therefore have been removed from the SAQP.

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020a) at Lavarack Barracks, Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**. The OMP (Department of Defence, 2020a) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, April and October in 2021 and April 2022.

Following each sampling event, a factual report will be prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the post dry-season sampling event completed in October and November 2020, specifically highlighting first-time detections and/or first-time exceedances of human health screening criteria for perfluorohexane sulfonic acid (PFHxS)+ perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA), where relevant.

This report has been prepared in accordance with the Defence (2020) PFAS OMP factual reports – interim guidance for preparation, v2.0, March 2020 (Department of Defence, 2020b).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the scope of works for the October and November 2020 sampling event in accordance with the sampling and analysis quality plan (SAQP) (AECOM, 2020).

2.0 Scope of Work

The sampling event at Lavarack Barracks was completed in general accordance with the SAQP (AECOM, 2020). In summary, the scope of works for this sampling event included:

- Obtaining permission to work in public spaces where some sampling locations are situated.
- Review of the SAQP prior to monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP) (2020);
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
 - Defence Routine Environment Water Quality Monitoring Manual;
 - AS/NZ 5667:1998 Water quality – Sampling;
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality; and
 - Relevant State regulatory guidelines.
- Gauging of groundwater level in monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations).
- Collection of groundwater samples at 40 locations including 31 on-Base locations, and nine off-Base locations (refer to **Table 1** below, and **Figure 2** in **Appendix A**).
- Collection of co-located surface water and sediment samples at 31 locations including 17 on-Base and 13 off-Base locations (refer to **Table 2** and **Table 3** below, and **Figure 3** in **Appendix A**).
- Collection of a standalone surface water sample (no sediment) from one on-Base location (**Table 2** below and **Figure 3** in **Appendix A**). It is noted that a total of 13 surface water samples and two sediment samples could not be collected during this sampling event (refer to **Table 18** for details).
- Collection of field duplicate samples at a rate of one in 10 primary samples, one rinsate sample per fieldwork day.
- Analysis of all samples for the PFAS suite at the standard limit of reporting (LOR).
- Preparation of this Sampling Event Factual Report.

Remaining on-Base	SD113, SD120
Base Boundary	SD126, SD128, SD132, SD133, SD134, SD135, SD136
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245

2.1 Deviations from the SAQP

Table 4 lists the deviations from the SAQP (AECOM, 2020) during this sampling round.

Table 4 Deviation from the SAQP during Dry Season 2020 Sampling Event

SAQP	Dry Season Sampling 2020
The water quality meter will be calibrated each day prior to the commencement of field activities.	The water quality meter was calibrated at the end of each day of sampling in preparation for the following day.
Co-located surface water and sediment samples were scheduled to be collected from SD/SW211 and SD/SW212.	During the sampling event it was identified that SD/SW211 and SD/SW212 are located on private property. These locations have not been included in this factual report.
Surface water sample was to be collected from SW150.	SW150 was not located during the sampling event and was therefore not sampled. This tap sampling location has not been sampled before and was unable to be found.
Collection of surface water at 10 co-located surface water and sediment locations	These locations were dry during the sampling event and samples of surface water were unable to be collected.

Table 5 summarises the changes to location identification names as suggested in the SAQP (AECOM, 2020) based on compliance with Defence Contamination Management Manual (DCMM) Annex L requirements (Defence, 2018 as amended 2019).

Table 5 Summary of Location ID Changes

Previous Location ID	Updated Location ID
MW002A	MW002
MW117B	MW117_S
MW123A	MW123_S
MW123B	MW123_I
MW125A	MW125_I
MW125B	MW125_S
MW205B	MW205_S
MW220	MW220_S (listed as MW220 in SAQP)
MW235B	MW235_S
MW236B	MW236_S
SD137A	SD137
SW137A	SW137

3.0 Methodology

The methodology used for the October and November 2020 sampling event was in general accordance with the SAQP (AECOM, 2020) and is summarised below in **Table 6**. Deviations from the SAQP are discussed in **Section 0**.

Table 6 Overall Methodology

Item	Details
Quality Assurance/Quality Control (QA/QC) Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), and rinsate samples. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. ALS Environmental Pty Ltd (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA). Chain of Custody Forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .
Field Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded for all groundwater and surface water samples using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in Table 5 below.

Table 7 Groundwater Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater was measured in each monitoring well immediately prior to the collection of groundwater samples.
Sample Collection Methodology	Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1 , Appendix B). Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in preparation for the next sampling round, with the exception of wells where tree roots could prohibit the retrieval of the HydraSleeves™ in future rounds, as detailed in Table 18 . HydraSleeves™ were not installed in monitoring wells which are also sampled as part of the routine Water Quality Monitoring Program.

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 8** below.

Table 8 Surface Water Sampling Methodology

Item	Details
Sampling methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 9** below.

Table 9 Sediment Sampling Methodology

Item	Details
Sampling Collection Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T5, Appendix B .

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, (HEPA 2020).
- Department of Health (DoH), 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM).

In accordance with the OMP (Department of Defence, 2020a) and SAQP (AECOM, 2020), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 10** below.

Table 10 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Off-Base - Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria as well as one surface water location which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

There are no human health or ecological guideline values available for sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2020).

Data validation assessment is provided in **Appendix C**.

The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with DCMM (Defence, 2018 as amended 2019) Annex L requirements.

4.0 Field Observations and Results

The 2020 dry season sampling event was completed between 26 October and 3 November 2020, commencing with groundwater gauging and deployment of HydraSleeves™. The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 11**.

Table 11 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	Weather was clear, hot and humid during the sampling event.
Estate Management Works or Training Activities	MW124, MW125_S and MW125_I are located within the Lavarack Barracks Close Training Area, controlled by Mount Stuart Training Area Range Control. A Training Area Safety and Management Information System (TASMIS) booking is required to access these areas. During the sampling event a TASMIS booking was made to access the area, however a training exercise was being conducted in the area concurrently. Sampling was conducted at the conclusion of the training exercise. The training exercises being conducted were not considered to impact the quality of the samples collected. No estate management works or training exercised impacted the sampling of surface water and sediment locations.

4.1 Groundwater Observations and Field Measurements

Table 12 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	The headworks at the following monitoring wells were noted to be damaged during the 2020 dry season sampling event: <ul style="list-style-type: none"> MW115 was bent at approximately 0.75 metres below top of casing (mBTOC). Well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. MW003 was bent at ground level. Well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. Concrete around the monument of MW125_S was cracked. Well casing was unaffected and well was able to be sampled in this sampling event. The ground had washed away at MW121 and the monument wobbled. Well casing was unaffected and well was able to be sampled in this sampling event.
Field Observations	Groundwater from five monitoring well locations (MW115, MW123_I, MW205_S, MW233 and MW235_S) had a sulphurous odour. Groundwater from three monitoring well locations (MW101, MW116 and MW131) had an organic (earthy) odour. Groundwater colour ranged from clear to brown. No other visible or olfactory indications of contamination were observed during the sampling of the monitoring wells. MW131, MW101 and MW235_S were blocked with tree roots. The blockages were removed with a decontaminated steel bailer and the HydraSleeve™ was subsequently deployed. Field observations are presented Table T1 in Appendix B .
Depth to Groundwater	Depth to groundwater was between 0.565 and 5.964 metres below top of casing (mBTOC). Groundwater elevations were between 0.603 and 23.306 metres Australian Height Datum (mAHD). Groundwater gauging data are presented in Table T1 in Appendix A .

Item	Observations
Groundwater Flow Direction	Groundwater contours and inferred groundwater flow directions in late October and early November 2020 are shown on Figure 4 in Appendix A . The inferred local groundwater flow direction is to the east-north-east, towards Cleveland Bay.
Geophysical Parameters	Groundwater geophysical parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below: <ul style="list-style-type: none"> DO results ranged between 1.44 mg/L (MW220_S) and 7.93 mg/L (MW236_S) indicating mildly to well oxygenated conditions. EC ranged from 7.4 µS/cm (MW236_S) to 51,290 µS/cm (MW232) fresh to saline conditions. pH ranged from 5.5 (MW232) to 7.61 (MW117_S). pH results generally indicated slightly acidic to neutral conditions. ORP ranged from -67.3 mV (MW205_S) to 112.5 mV (MW125_S) indicating mildly to strongly reducing conditions. Temperature ranged from 26.2°C (MW226) to 31°C (MW072 and MW074).

4.1.1 PFAS Groundwater Analytical Results

Of the 40 groundwater wells sampled during this event, 39 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**. Four off-Base samples exceeded the adopted drinking water guideline for sum of PFHxS and PFOS and 23 samples, both on and off-Base, exceeded the adopted ecological guidelines for PFOS (**Table T2, Appendix B**).

First-time detections and first-time exceedances of guideline values are presented in **Table 13** below.

Table 13 First-time Detections of PFAS or New Exceedances of Guidelines in Groundwater

Type	Monitoring wells / bores	PFOS concentration (µg/L)		PFOA concentration (µg/L)		PFHxS + PFOS concentration (µg/L)	
		Oct/Nov 2020	Historical maximum	Oct/Nov 2020	Historical maximum	Oct/Nov 2020	Historical maximum
First-time detections of PFOS, PFOA or PFHxS+PFOS	MW116	0.01**	ND*	<0.01	ND	0.08	0.03
	MW117_D	0.02	ND	<0.01	ND	0.04	0.04
	MW118	0.01	ND	<0.01	ND	0.05	0.05
	MW124	0.01	ND	<0.01	ND	0.01	ND
	MW125_S	0.02	ND	<0.01	ND	0.26	0.3
	MW205_S	0.02	ND	<0.01	ND	0.04	0.02
	MW220_S	0.04	ND	<0.01	ND	0.68	0.38
	MW235_S	0.02	ND	<0.01	ND	0.02	0.02
First-time exceedance of the NEMP (HEPA, 2020) 95% species protection ecological screening criteria in on-Base groundwater.	MW120	0.14^	0.03	<0.01	ND	0.27	0.17
	MW232	0.17	0.1	<0.01	ND	0.27	0.21

Concentrations have been rounded to two decimal places.

* ND = not detected

**Blue cells denote first time detection above LOR.

^Yellow cells denote new exceedance of guideline values.

4.2 Surface Water Observations and Field Measurements

Table 14 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible with the exception of SW150 which could not be located. This location had not been sampled before and was listed in the PMAP as a tap, however, no tap was found at this location. During the sampling event it was identified that SW211 and SW212 were located on private property. These locations have not been included in this factual report as permission was not granted.
Field Observations	Surface water from one location (SW232) had a putrefied odour with biological sheen on the surface. Surface water from one location (SW220) had a septic odour. Surface water from one location (SW203) had a sulfurous odour with biological sheen on the surface. Surface water from seven locations (SW119, SW134, SW140, SW132, SW135, SW113 and SW217) had an organic odour. SW217 also had a biosheen appearance. No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations. Field observations are presented Table T3 in Appendix B .
Geophysical Parameters	Surface water geophysical parameters were measured at the time of sampling. The readings are presented in Table T3 in Appendix B and are summarised below: <ul style="list-style-type: none"> • DO results ranged between 1.92 mg/L (SW203) and 8.93 mg/L (SW227). • EC ranged from 186.9 µS/cm (SW132) to 64,101 µS/cm (SW242) fresh to saline conditions. • pH ranged from 6.53 (SW139) to 8.41 (SW227). pH results generally indicated acidic to neutral conditions. • ORP ranged from -57.1 mV (SW203) to 44.3 mV (SW205) indicating mildly to strongly reducing conditions. • Temperature ranged from 26.6°C (SW139) to 35.7°C (SW119).

4.2.1 PFAS Surface Water Analytical Results

Of the 19 surface water samples, 14 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**. PFOS concentrations in ten samples exceeded the adopted ecological guidelines (**Table T4**, **Appendix B**).

First-time detections and first-time exceedances of guideline values are presented in **Table 15** below.

Table 15 First-time Detections of PFAS or New Exceedances of Guidelines in Surface Water

Type	Surface Water Locations	PFOS concentration (µg/L)		PFOA concentration (µg/L)		PFHxS+PFOS concentration (µg/L)	
		Oct/Nov 2020	Historical maximum	Oct/Nov 2020	Historical maximum	Oct/Nov 2020	Historical maximum
First-time detections of PFOS, PFOA or PFHxS+PFOS in surface water on-Base	SW113	0.22	0.07	0.03**	ND*	0.41	0.17
First-time detections of PFOS, PFOA or PFHxS+PFOS in surface water off-Base	There were no first-time detections of PFOS, PFOA or PFHxS+PFOS in off-Base surface water samples.						
First-time exceedance of the NEMP (HEPA, 2020) 95% species protection ecological screening criteria or recreational water guidelines in surface water on-Base	SW113	0.22^	0.07	0.03	ND	0.41	0.17
	SW119	0.77	0.88	0.07	0.04	2.43	1.24
	SW121	1.19	0.77	0.09	0.06	3.32	1.9

Concentrations have been rounded to two decimal places.

* ND = not detected

**Blue cells denote first time detection above LOR.

^Yellow cells denote new exceedance of guideline values.

4.3 Sediment Observations and Field Measurements

Table 16 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible. During the sampling event it was identified that SD211 and SD212 were located on private property. These locations have not been included in this factual report.
Field Observations	Sediment at five locations (SD119, SD121, SD134, SD140 and SD232) had an odour of decaying organic matter. Sediment at two locations (SD139 and SD203) had a sulfurous odour. No other visible or olfactory indications of contamination were observed during the sampling of sediment locations. Sediment logging data are presented in Table T5, Appendix B .

4.3.1 PFAS Sediment Analytical Results

Of the 29 sediment samples, 22 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T6 in Appendix B**. First-time detections of PFOA and PFHxS+PFOS in sediment are presented in **Table 17** below and presented on **Figure 5 in Appendix A**. There are no human health or ecological guideline values available for sediment.

Table 17 First-time Detections of PFAS in Sediment

Sediment Locations	PFOA concentration (mg/kg)	PFHxS + PFOS concentration (mg/kg)
SD113	<0.0002	0.0005
SD119	0.0011*	0.0333
SD121^	0.0016	0.0565
SD126^	<0.0002	0.0003
SD128^	<0.0002	0.001
SD129^	<0.0002	0.0005
SD133^	<0.0002	0.0007
SD134^	<0.0002	0.0003
SD135	<0.0002	0.0005
SD136	<0.0002	0.0018
SD233	<0.0002	0.0022
SD242	<0.0002	0.0010

Concentrations have been rounded to four decimal places.

*Blue cells denote first time detection above LOR.

^No historical data are available for this sediment sampling location. The first-time detection is also the first sample collected at this location.

5.0 Summary and Next Sampling Event

5.1 Summary of Monitoring Event

The dry season monitoring event included sampling of groundwater, surface water and sediment both within Lavarack Barracks and the surrounding suburbs between 26 October and 3 November 2020.

Table 18 Summary of Sampling Event

Item	Comment	Recommended Actions
<p>Groundwater: Access to sampling locations and monitoring well network condition.</p>	All of the 40 monitoring well locations were accessible and able to be sampled.	No actions recommended.
	The casing of MW003 and MW115 was bent below ground level. A sample was collected using a HydraSleeve™ without a collar.	No actions recommended.
	The monument of MW121 wobbled due to a wash out of the ground below the concrete plinth. The concrete plinth at the base of the monument of MW125_S is cracked.	Repair concrete plinth on MW121 and MW125_S.
	Data loggers were present in the following off-Base wells: <ul style="list-style-type: none"> MW205_S MW232 MW235_S MW236_S. Data loggers were removed to deploy HydraSleeves™ and replaced in the well immediately, on top of the HydraSleeve™. The data loggers were removed a second time during retrieval of the HydraSleeves™ and immediately replaced. A note was left for the owner of the data loggers in each well collar detailing date and time of removal and contact information. HydraSleeves™ were not redeployed in wells with data loggers.	Defence has advised that the owner of the data loggers is unknown. It is recommended that the data loggers be removed and the data downloaded. AECOM to deploy HydraSleeves™ in these wells at the beginning of the subsequent sampling round.
<p>Sediment/Surface Water: Access to sampling locations.</p>	29 of the 31 sediment locations and 29 of the 32 surface water locations were accessible. 10 locations were dry, and no surface water sample was able to be collected. These locations were: <ul style="list-style-type: none"> SW109 SW110 SW120 SW126 SW128 SW129 SW130 SW133 SW136 SW137. 	Actions for inaccessible locations detailed below.
	SD/SW211 and SD/SW212 are located on private property. Access to these locations has not been granted by the Property owner.	Access permission for sampling of these locations is to be requested from the stakeholder prior to the next sampling event.

Item	Comment	Recommended Actions
	<p>SW150 was listed in the PMAP for sampling. This location had not been sampled before and was listed as a tap. No tap was found in the location of SW150 as per the PMAP.</p>	<p>Defence to clarify the co-ordinates of this location and verify the sampling point for inclusion in future monitoring rounds. If this sample is to be collected from a tap this location should be renamed as per DCMM Annex L to type "POT" or "OTH" to avoid confusion with surface water body.</p>
<u>Analytical Results</u>	<p>PFAS compounds were detected above laboratory LOR in 39 groundwater samples, 14 surface water samples and 22 sediment samples.</p>	<p>Continue monitoring in accordance with the OMP.</p>
<u>First-time detections of PFOS, PFOA or PFHxS+PFOS</u>	<p><u>Groundwater:</u> Five on-Base groundwater samples (MW116, MW117_D, MW118, MW124, MW125_S) reported first-time detection of PFOS. MW124 also reported first-time detection of PFHxS+PFOS. Three off-Base groundwater sample (MW205_S, MW220_S and MW235_S) reported first-time detections of PFOS. <u>Surface Water:</u> One on-Base surface water sample (SW113) reported first-time detection of PFOA. <u>Sediment:</u> Two sediment samples (SD119 and SD121) reported a first-time detection of PFOA. Twelve sediment samples (SD113, SD119, SD121, SD126, SD128, SD129, SD133, SD134, SD135, SD136, SD233 and SD242) reported first-time detection of PFHxS+PFOS. It is noted that there are no historical data available for SD121, SD126, SD128, SD129, SD133 and SD134 and these first-time detections are also the first time these locations have been sampled.</p>	<p>Continue monitoring in accordance with the OMP.</p>
<u>First-time exceedances of screening criteria for PFOS, PFOA or PFHxS+PFOS</u>	<p><u>Groundwater:</u> One on-Base (MW120) and one off-Base (MW232) groundwater sample reported first-time exceedance of the NEMP (HEPA, 2020) 95% Species Protection for groundwater for PFOS. <u>Surface Water:</u> One on-Base surface water sample (SW113) reported first-time exceedance of the NEMP (HEPA, 2020) 95% Species Protection for PFOS in surface water. Two on-Base surface water samples (SW119 and SW121) reported first-time exceedance of the NEMP (HEPA, 2020) recreational water guidelines for PFHxS+PFOS.</p>	<p>No actions recommended.</p>

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for late March / early April 2021.

5.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled for June 2021.

mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Eh - Redox Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre
 µS/cm - microsiemens per centimeter

NTU - Nephelometric Turbidity Unit
 °C - degrees Celsius
 "-" denotes no analysis taken
 mV - millivolt

* Depth at which collar of the HydraSleeve was installed.

Location ID	Sample ID	Date	Sample Description	Odour	Sample Method
Eastern PFAS Contamination Area					
SD119	0229_SD119_201029	29/10/2020	SILT, non-plastic, black with black , with some organic matter, wet, very soft, compost - decayed organic matter.	Compost - decayed organic matter	Trowel
SD121	0229_SD121_201029	29/10/2020	SILT, non-plastic, black with red-brown mottled, wet, very soft, compost - decayed organic matter.	Compost - decayed organic matter	Trowel
Former Fire Station					
SD109	0229_SD109_201029	29/10/2020	sandy CLAY, low plasticity, dark brown, with some, dry to moist, soft. highly organic	No odour	Trowel
SD110	0229_SD110_201029	29/10/2020	CLAY, medium to high plasticity, brown-grey with grey mottled, with some gravels and organics, dry to moist, soft.	No odour	Trowel
Lavarack Golf Course & Sporting Field					
SD129	0229_SD129_201029	29/10/2020	SAND, fine to medium, well graded, sub-rounded to sub-angular, pale brown with brown speckled, dry, very loose.	No odour	Trowel
SD130	0229_SD130_201029	29/10/2020	SAND, non-plastic, dark brown with red-brown , with some gravels, clay and organic matter, moist, soft.	No odour	Trowel
Top, Middle and Lower Dams					
SD137	0229_SD137_201029	29/10/2020	sandy CLAY, medium plasticity, grey with red-orange mottled, with some sub rounded gravels and organic matter, moist, soft.	No odour	Trowel
SD139	0229_SD139_201029	29/10/2020	clayey SAND, medium to coarse, well graded, brown, highly organic - roots and leaves, saturated, loose, rotten egg (sulfurous).	Rotten egg (sulfurous)	Trowel
SD140	0229_SD140_201029	29/10/2020	clayey SILT, non-plastic, dark grey with brown , dry, compost - decayed organic matter. high organic content	Compost - decayed organic matter	Trowel
Remaining On-Base					
SD113	0229_SD113_201028	28/10/2020	SAND, brown, coarse grained, saturated, large cobbles and fine to coarse gravels	No odour	Trowel
SD120	0229_SD120_201028	28/10/2020	gravelly SAND, medium to coarse, well graded, sub-angular, brown with red , dry to moist, very loose, roots.	No odour	Trowel
Base Boundary					
SD126	0229_SD126_201029	29/10/2020	CLAY, medium plasticity, brown with pale grey mottled, moist, firm. organic components - roots	No odour	Trowel
SD128	0229_SD128_201029	29/10/2020	SAND, medium to coarse, poorly graded, sub-rounded to sub-angular, red-brown with dark brown , trace of silt, moist, very loose, weakly cemented.	No odour	Trowel
SD132	0229_SD132_201029	29/10/2020	silty, sandy CLAY, fine grained, dark grey, saturated, very soft, highly organic - leaves and roots	No odour	Trowel
SD133	0229_SD133_201029	29/10/2020	silty CLAY, low plasticity, dark grey, fine grained, dry to moist	No odour	Trowel
SD134	0229_SD134_201029	29/10/2020	sandy-gravelly CLAY, low to medium plasticity, dark grey with grey mottled, with some silt and organic matter, wet, soft to firm, compost - decayed organic matter.	Compost - decayed organic matter	Trowel
SD135	0229_SD135_201028	28/10/2020	SAND, red-orange, saturated.	No odour	Trowel
SD136	0229_SD136_201028	28/10/2020	SAND, brown, saturated. trace organic matter	No odour	Trowel
Off-Base					
SD203	0229_SD203_201102	2/11/2020	SAND, fine to medium, well graded, brown with red-brown speckled, saturated, very loose, rotten egg (sulfurous).	Rotten egg (sulfurous)	Trowel
SD205	0229_SD205_201102	2/11/2020	SILT, non plastic, grey, fine grained, saturated	No odour	Trowel
SD217	0229_SD217_201102	2/11/2020	silty CLAY, low plasticity, dark grey, saturated, firm.	No odour	Trowel
SD220	0229_SD220_201102	2/11/2020	silty CLAY, low plasticity, dark grey, saturated, soft, highly organic - roots.	No odour	Trowel
SD227	0229_SD227_201103	3/11/2020	SAND, fine, well graded, dark grey, saturate. some organics	No odour	Trowel
SD232	0229_SD232_201102	2/11/2020	silty CLAY, low plasticity, grey, saturated, soft to firm, compost - decayed organic matter. roots	Compost - decayed organic matter	Trowel
SD233	0229_SD233_201102	2/11/2020	CLAY, low to medium plasticity, pale grey, with some silt, saturated, firm. highly organic	No odour	Trowel
SD242	0229_SD242_201102	2/11/2020	silty CLAY, medium plasticity, grey, with some sub angular gravels, saturated, soft to firm. dead fish heads - likely from fishing	No odour	Trowel
SD243	0229_SD243_201102	2/11/2020	silty CLAY, medium plasticity, dark grey, saturated, soft.	No odour	Trowel
SD244	0229_SD244_201103	3/11/2020	gravelly SAND, fine to coarse, poorly graded, angular to sub-angular, orange-brown, saturated, very loose. some shell fragments and small crustaceans	No odour	Trowel
SD245	0229_SD245_201103	3/11/2020	gravelly SILT, non-plastic, dark grey, saturated, soft, sub-angular gravels.	No odour	Trowel

Appendix C

Analytical Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	[REDACTED]	Date:	07/12/2020
Client:	Department of Defence				
Site:	Lavarack Barracks Townsville (0229)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	[REDACTED]	Date:	07/12/2020
No. of primary samples:	40 groundwater, 19 surface water, 29 sediment				
Laboratory:	ALS (Brisbane), NMI (Sydney)	Project Manager:	[REDACTED]		10/12/2020
Lab reference:	ET2004260, ET2004277, ET2004329, RN1294231				
Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.				
	The data are considered appropriate for use to meet the project objectives.				
Field QA/QC					
Sampling personnel	Sampling was conducted by AECOM personnel between 26 October and 3 November 2020.				
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per day of sampling (four in total). Rinsates were collected from the decontaminated interface probe (0229_QC300_201028 and 0229_QC303_201103), trowel (0229_QC301_201029) and surface water sampling cup (0229_QC302_201102). Concentrations were reported below the LOR for all analytes tested (see Table C4).				
Trip Blanks	Trip blank samples were not collected as they are not required per the SAQP (AECOM, 2020).				
Eskies to Laboratory	A total of three eskies of samples were submitted to ALS across the sampling event.				
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a frequency of one in ten primary samples (four duplicates and triplicates for groundwater, three duplicates and triplicates for surface water and four duplicates and triplicates for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for groundwater, surface water and sediment.				
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported at 5.0 °C, 5.6 °C and 24.0 °C. The elevated sample temperature of 24.0 °C was likely to be due to direct delivery of the samples from the field to the laboratory with insufficient time for the samples to be cooled before delivery, it should be noted that all eskies contained ice upon receipt by the laboratory. Samples are selected at random from the eskies by the receiving laboratory to record the temperature. No record is made of the sample that the temperature is reported from. It is noted that the recorded average field temperature of groundwater and surface water samples were 28.4 °C and 30.7 °C, respectively. This is higher than the laboratory reported 24.0 °C and demonstrates that an attempt was made to chill the samples prior to delivery to the laboratory.				

	All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, with the exception of 29/10/2020 which was calibrated the night before sampling. This is a deviation from the SAQP which states the water quality meter will be calibrated each day before sampling. The calibration of the meter on the night before sampling is unlikely to affect the field readings, however for future rounds the meter will be calibrated on the day of sampling.
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none"> Laboratory duplicates for PFAS (4.17 to 9.52 %) were below the expected rate of 10% in ET2004329 and ET2004277 for one of the laboratory methods used (EP231X) however duplicate sampling rates for laboratory method EP231X-INJ were 33%. Matrix spikes for PFAS in water (0.0%) were below the expected rate of 5% in ET2004329 and ET2004277. Similarly to the above, matrix spikes were completed at an appropriate frequency for method EP231X-INJ. <p>Based on this consideration, the laboratory QC is considered sufficient for the purposes of this investigation.</p>
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits.
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none"> Perfluorooctane sulfonic acid (PFOS) in 0229_QC103_201029 (ET2004277) was not determined due to background level being greater than or equal to four times the spike level. 10:2 Fluorotelomer sulfonic acid (10:2 FTS) in 0229_SD113_201028 (ET2004260) reported at 59.2% which is less than the control limit (70-130%). 10:2 FTS was not detected in any soil samples in batch ET2004260.
Surrogate spike recovery	Surrogate spike recoveries were within control limits.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.

Limits of reporting	<p>Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.</p> <p>LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples:</p> <ul style="list-style-type: none"> • 0229_MW131_201028, 0229_MW115_201028, 0229_SW119_201029 and 0229_SW121_201029; • 0229_MW135_201028 and 0229_QC100_201028; • 0229_SD109_201029; • 0229_SD217_201102 and 0229_QC107_201102 • 0229_MW217_201103 and 0229_MW232_201103
Field duplicate RPDs	<p>RPDs for groundwater, surface water, and sediment are reported in Tables C1, C2, and C3 respectively. Field duplicate RPDs were reported within control limits.</p>
Field triplicate RPDs	<p>Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none"> • 0229_SD139_201029 and 0229_QC203_201029 for PFHxS (99%) PFOS (57%). <p>The elevated RPDs for duplicate sediment samples is potentially due to heterogeneity within the sampling location. The sediment type at this location was clayey sand and as such there is inherent heterogeneity in the sample due to clumps of clay surrounded by sand. These differences do not impact data quality.</p>

*RPDs have only been considered where a concentration is greater than 1 times the EQL.

**Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 81 (1 - 10 x EQL); 50 (10 - 30 x EQL); 30 (> 30 x EQL))

***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
∅ = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample 0229_SD113_201028 shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP231X-INJ PFAS: The LOR for PFBA has been raised for sample 0229_MW131_201028 and 0229_MW115_201028 due to matrix interference.
- EP231X-INJ PFAS: The LOR for PFPeA has been raised for samples 0229_MW135_201028, 0229_QC100_201028 and 0229_MW115_201028 due to matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- **Amendment (19/11/2020): This report has been amended as a result of a request to change sample #22 ID from 0229_QC102_201028 to 0229_QC101_201028 received by ALS from [REDACTED] on 18.11.20. All analysis results are as per the previous report.**
- Amendment-1 (09/11/2020): This report has been amended to alter the sub-matrixes of some samples. All analysis results are as per the previous report.
- EP231X PFAS: Samples '0229_MW117_S_201028' and '0229_MW114_201028' required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X-INJ PFAS by LCMSMS: Particular samples have been tested to the legacy QSM 5.1 aligned, NATA accredited method due to sample matrix being unsuitable for SPE extraction (high sediment content).
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

QUALITY CONTROL REPORT

Work Order : ET2004260
Amendment : 2

Page : 1 of 14

Client : AECOM Australia Pty Ltd
Contact : [Redacted]
Address : [Redacted]
Telephone : ----
Project : QLD_0229_PFASOMP_20
Order number : 60621487 task 3.1
C-O-C number : 15322
Sampler : [Redacted]
Site : QLD_0229
Quote number : TV/123/20
No. of samples received : 26
No. of samples analysed : 26

Laboratory : Environmental Division Townsville
Contact : [Redacted]
Address : [Redacted]
Telephone : [Redacted]
Date Samples Received : 28-Oct-2020
Date Analysis Commenced : 30-Oct-2020
Issue Date : 19-Nov-2020

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Contains redacted information.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231D: (n:2) Fluorotelomer Sulfonic Acids	ET2004260--008	0229_SD113_201028	10:2 Fluorotelomer sulfonic acid (10:2 FTS)	120226-60-0	59.2 %	70.0-130%	Recovery less than lower data quality objective

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS in solid matrices	ORG73	SOIL	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- **Please be advised that sample #20 was logged in Compass as water matrix but has been confirmed as soil by the client and was logged as soil.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

C-O-C number : 15323
Sampler : [Redacted]
Site : QLD_0229
Quote number : TV/123/20
No. of samples received : 36
No. of samples analysed : 36

Page : 1 of 23
Laboratory : Environmental Division Townsville
Contact : [Redacted]
Address : [Redacted]
Telephone : [Redacted]
Date Samples Received : 29-Oct-2020 17:05
Date Analysis Commenced : 03-Nov-2020
Issue Date : 17-Nov-2020 11:23

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Contains two rows of redacted information.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants and matrix interferences. LOR values have been adjusted accordingly. Matrix spike and particular surrogate recoveries not determined.
- Amendment (17/11/2020): This report has been amended following the separation of sample "0229_MW226_201029" to a separate COA as per client request from [REDACTED]. All analysis results are as per the previous report.
- EP231X PFAS: The LOR of PFBA for sample "0229_SW119_201029" and "0229_SW121_201029" has been raised due to sample matrix interferences.
- EP231X PFAS: The LOR of PFDS for sample "0229_SD109_201029" has been raised due to sample matrix interferences.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Work Order : ET2004277-AB
Amendment : 1

Page : 1 of 11

Client : AECOM Australia Pty Ltd

Laboratory : Environmental Division Townsville

Contact : [Redacted]

Contact : [Redacted]

Address : [Redacted]

Address : [Redacted]

Telephone : ----

Telephone : [Redacted]

Project : QLD_0229_PFASOMP_20

Date Samples Received : 29-Oct-2020

Order number : 60612487_3.1

Date Analysis Commenced : 03-Nov-2020

C-O-C number : 15323

Issue Date : 17-Nov-2020

Sampler : [Redacted]

Site : QLD_0229

Quote number : TV/123/20

No. of samples received : 36

No. of samples analysed : 36

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Contains redacted information.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: SOIL

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2004277--005	0229_QC103_201029	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	21	9.52	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	21	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS in solid matrices	ORG73	SOIL	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***17/11/2020***: SRN has been resent to acknowledge splitting of reports as per client request from [REDACTED]. For any further information regarding these adjustments please contact client services at [REDACTED]
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted]

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants and matrix interferences. LOR values have been adjusted accordingly. Matrix spike and particular surrogate recoveries not determined.
- Amendment (17/11/2020): This report has been amended following the separation of sample "0229_MW226_201029" to a separate COA as per client request from [REDACTED]. All analysis results are as per the previous report.
- EP231X PFAS: The LOR of PFBA for sample "0229_SW119_201029" and "0229_SW121_201029" has been raised due to sample matrix interferences.
- EP231X PFAS: The LOR of PFDS for sample "0229_SD109_201029" has been raised due to sample matrix interferences.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2004277	Page	: 1 of 7
Amendment	: 1		
Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 29-Oct-2020
Site	: QLD_0229	Issue Date	: 17-Nov-2020
Sampler	: [REDACTED]	No. of samples received	: 37
Order number	: 60612487_3.1	No. of samples analysed	: 37

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2004277--005	0229_QC103_201029	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	21	9.52	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	21	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS in solid matrices	ORG73	SOIL	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Amendment-2 (02/12/2020): This report has been amended to alter the reporting - to exclude samples #8 & #10 from the report. All analysis results are as per the previous report.
- EP231X PFAS: The LOR for PFOS has been raised for sample '0229_QC107_201102' due to matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- **Amendment (19/11/2020): This report has been amended as a result of a request to remove "extra volume for lab qc" description on some of the samples. All analysis results are as per the previous report.**
- EP231X PFAS: Samples '0229_SD217_201102' and '0229_QC107_201102' required dilution prior to analysis due to matrix interferences. Matrix spike recovery not determined and LOR values have been adjusted accordingly.
- EP231X-INJ PFAS: Samples 0229_MW217_201103 and 0229_MW232_201103 required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X-INJ PFAS by LCMSMS: Particular samples have been tested to the legacy QSM 5.1 aligned, NATA accredited method due to sample matrix being unsuitable for SPE extraction (high sediment content).
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

QUALITY CONTROL REPORT

Work Order : **ET2004329**
Amendment : **2**

Page : 1 of 14

Client : **AECOM Australia Pty Ltd**

Laboratory : Environmental Division Townsville

Contact : [REDACTED]

Contact : [REDACTED]

Address : [REDACTED]

Address : [REDACTED]

Telephone : ----

Telephone : [REDACTED]

Project : QLD_0229_PFASOMP_20

Date Samples Received : 03-Nov-2020

Order number : 60612487_3.1

Date Analysis Commenced : 05-Nov-2020

C-O-C number : 15443

Issue Date : 02-Dec-2020

Sampler : [REDACTED]

Site : QLD_0229

Quote number : TV/123/20

No. of samples received : 44

No. of samples analysed : 42

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: SOIL

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	24	4.17	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	24	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS in solid matrices	ORG73	SOIL	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ET2004329-003 : 02-Nov-2020 10:30 : 0229_MW124_201102 - Extra volume for lab qc

ET2004329-044 : 03-Nov-2020 16:17 : 0229_MW232_201103 - Extra volume for lab qc

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 9
Report No. RN1294231

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects. δ
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.
LOR raised for FOUEA in sample N20/026331 due to low surrogate recovery.

Organics - NSW

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020) at Lavarack Barracks, Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**. The OMP (Department of Defence, 2020) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, April and October in 2021 and April 2022.

These sampling events include the following:

- Groundwater sampling of 31 on-Base wells at Lavarack Barracks and nine off-Base wells in the suburbs of Annandale, Idalia and Wulguru.
- Sediment sampling at 17 on-Base locations at Lavarack Barracks and 13 off-Base locations in the Ross River and waterways in Annandale and Idalia with co-located surface water sampling when water is present.

Following each sampling event, a factual report will be prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the post wet-season sampling event completed in late March to May 2021, specifically highlighting first-time detections and/or first-time exceedances of human health screening criteria for perfluorooctane sulfonate (PFOS) + perfluorohexane sulfonic acid (PFHxS) and perfluorooctanoic acid (PFOA), where relevant, and the results of follow up sampling to verify concentrations at two surface water locations was completed June 2021.

This report has been prepared in accordance with the Defence (2020) PFAS OMP factual reports – interim guidance for preparation, v0.2, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the scope of works for the March/April 2021 sampling event in accordance with the sampling and analysis quality plan (SAQP) (AECOM, 2021).

2.0 Scope of Work

The sampling event at Lavarack Barracks was completed in general accordance with the SAQP (AECOM, 2021). In summary, the scope of works for this sampling event included:

- Obtaining permission to work in public spaces where some sampling locations are situated.
- Review of the SAQP prior to monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP) (2020);
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
 - Defence Routine Environment Water Quality Monitoring Program;
 - AS/NZ 5667:1998 Water quality – Sampling;
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality; and
 - Relevant State regulatory guidelines.
- Gauging of groundwater level in monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations).
- Collection of groundwater samples at 40 locations including 31 on-Base locations, and nine off-Base locations (refer to **Table 1** below, and **Figure 2** in **Appendix A**).
- Collection of co-located surface water and sediment samples at 31 locations including 17 on-Base and 13 off-Base locations (refer to **Table 2** and **Table 3** below, and **Figure 3** in **Appendix A**). It is noted that one surface water location was dry during the sampling round and no surface water sample was collected from this location.
- Collection of intra- and inter-laboratory duplicate samples at a rate of one in 10 primary samples, one rinsate sample per fieldwork day, and one trip-blank submitted to the laboratory per sample batch.
- Analysis of all samples for a suite of 28 PFAS analytes at the standard limit of reporting (LOR).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report.

Base Boundary – On-Base	MW002, MW003, MW117D, MW117S, MW118, MW119, MW124, MW125I, MW125S
Off-Base	MW205S, MW212, MW217, MW220S, MW226, MW232, MW233, MW235S, MW236S

Table 2 Surface Water Sampling Locations

Source Area	Surface Water Location ID
Eastern PFAS Contamination Area	SW119, SW121
Former Fire Station	SW109, SW110
Lavarack Golf Course and Sporting Fields	SW129, SW130, SW150
Top Middle and Lower Dams	SW139, SW140, SW144
Remaining on-Base	SW113, SW120
Base Boundary	SW126, SW128, SW132, SW133 (dry at the time of sampling), SW134, SW135, SW136
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245

Table 3 Sediment Sampling Locations

Source Area	Sediment Location ID
Eastern PFAS Contamination Area	SD119, SD121
Former Fire Station	SD109, SD110
Lavarack Golf Course and Sporting Fields	SD129, SD130,
Top Middle and Lower Dams	SD139, SD140, SD144
Remaining on-Base	SD113, SD120
Base Boundary	SD126, SD128, SD132, SD133, SD134, SD135, SD136
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245

3.0 Methodology

The methodology used for the March/April 2021 sampling event was in general accordance with the SAQP (AECOM, 2021) and is summarised below. Deviations from the SAQP are discussed in **Section 3.6**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	<p>Depth to groundwater was measured at the beginning of the sampling round to facilitate gauging all wells within the shallow aquifer on the same day.</p> <p>The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.</p>
Water Quality Parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F.</p>
Sampling Methodology	<p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1, Appendix B). For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. Once sampling was completed, new HydraSleeves™ were deployed in preparation for the next sampling round, with the exception of wells where tree roots could prohibit the retrieval of the HydraSleeves™ in future rounds, as detailed in Table 15. HydraSleeves™ were not installed in monitoring wells which are also sampled as part of the routine Water Quality Monitoring Program.</p>
Quality Assurance/Quality Control (QA/QC) Samples	<p>Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), and rinsate samples. Refer to Appendix C for assessment of QA/QC sample data.</p>
Sample Analysis	<p>All primary samples were submitted for PFAS suite analysis using the standard levels of detection.</p> <p>ALS Environmental Pty Ltd (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.
Quality Assurance/Quality Control (QA/QC) Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), and rinsate samples. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. ALS Environmental Pty Ltd (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA). Chain of Custody Forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T5, Appendix B .
Quality Assurance/Quality Control (QA/QC) Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), and rinsate samples. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. ALS Environmental Pty Ltd (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used

Item	Details
	<p>as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, (HEPA 2020).
- Department of Health (DoH), 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM).

In accordance with the OMP (Department of Defence, 2020) and SAQP (AECOM, 2021), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** below.

Table 7 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	<p>The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020).</p> <p><i>All off base groundwater results will be compared to these criteria. as well as one surface water location which is within Townsville's emergency drinking water supply.</i></p>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	<p>The values are from the PFAS NEMP (HEPA, 2020).</p> <p><i>All surface water results will be compared to these criteria.</i></p>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	<p>The values are from the PFAS NEMP (HEPA, 2020).</p> <p><i>All surface water and groundwater results will be compared to these criteria.</i></p>
	PFOA	220 µg/L	

There are no human health or ecological guideline values available for sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2021).

Data validation assessment is provided in **Appendix C**.

One rinsate blank returned detections of PFOS and PFHxS. Sample SW135 was the last sample collected at the end of the fieldwork day and concentrations in the surface water sample were higher than previously reported. There is a risk of cross-contamination for surface water samples collected on 29 March 2021. Field decontamination protocols will be reviewed prior to the next sampling event.

The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with DCMM (Defence, 2018 as amended 2019) Annex L requirements (Department of Defence, 2019).

3.6 Deviations from the SAQP

Table 8 lists the deviations from the SAQP (AECOM, 2021) during this sampling round.

Table 8 Deviation from the SAQP during Wet Season 2021 Sampling Event

SAQP	Wet Season Sampling 2021
Collection of surface water at 31 co-located surface water and sediment locations	SW133 was dry during the sampling round and no surface water could be sampled, this is not expected to have an impact on the interpretation of data.
Collection of surface water and sediment samples at SW137/SD137 as presented in Figure 3 of the SAQP (AECOM, 2021).	SW137/SD137 was nominated as a sampling location in the PMAP (Department of Defence, 2020), to be collected from the top dam. Following the main round of sampling it was identified that this sampling point was represented in the incorrect location in the SAQP due to an issue with location data held in ESdat. The SAQP has been updated to reflect this change following the sampling event. The correct location in the top dam was identified and renamed SW144/SD144 in ESdat. This was subsequently sampled on 13/05/2021 with approval from the Defence project manager and reference to SW137/SD137 removed from this report, this is not expected to impact the interpretation of data.
Collection of duplicate and triplicate samples at a rate of one in ten primary samples for sediment.	Three out of a required four pairs of duplicate and triplicate samples collected and analysed. See Appendix C . All sediment relative percentage differences for duplicate and triplicate samples analysed were within control limits and this is not considered to impact interpretation of data.
Collection of rinsate samples at a rate of one per day of sampling.	One rinsate blank, collected on 29 March 2021, returned detections of PFOS and PFHxS, as discussed in Section 3.5 . Two surface water locations (SW135 and SW139) were resampled on 22 June 2021 to verify concentrations due to the risk of cross-contamination for surface water samples collected on 29 March 2021.

SAQP	Wet Season Sampling 2021
	A third surface water location (SW120) was proposed for resampling, however no surface water was present on 22 June 2021.
All surface water samples are to be analysed against the drinking water guidelines outlined in the PFAS NEMP (HEPA, 2020)	One surface water location which is within Townsville's emergency drinking water supply will be compared to the drinking water guideline (HEPA, 2020) and all others are to be assessed against the recreational guideline for surface waters as outlined in the PFAS NEMP (HEPA, 2020). The SAQP will be amended to reflect the correct screening criteria allocation for surface water locations.

4.0 Field Observations and Results

The main 2021 wet season sampling event was completed between 26 March and 1 April 2021, commencing with groundwater gauging and deployment of HydraSleeves™. A supplementary sampling event was completed on 13 May 2021 to collect samples from newly identified surface water location SW144/SD144. The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 9**.

Table 9 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	Weather was overcast and humid during the majority of sampling event with periods of light rain.
Estate Management Works or Training Activities	No estate management works, or training exercises impacted the sampling of groundwater, surface water and sediment locations.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 10 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	<p>The headworks at the following monitoring wells were noted to be damaged during the 2021 wet season sampling event:</p> <ul style="list-style-type: none"> The monument lid did not close fully at MW124. This well was able to be sampled during this sampling event. This well was capped on arrival and departure. MW115 was bent at approximately 0.75 metres below top of casing (mBTOC). The well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. MW003 was bent at ground level. The well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. Concrete around the monument of MW125S was cracked. Well casing was unaffected and the well was able to be sampled in this sampling event. The ground had washed away at MW121 and the monument was loose. The well casing was unaffected and the well was able to be sampled in this sampling event. Only one of two bolts on MW212 could be secured. This well was able to be sampled during this sampling event. There is no well cap on MW226. This is an irrigation bore which is currently covered by a plastic kennel within a small fenced compound. The HydraSleeve™ in this well was installed during this sampling event, limiting the time in which the sample could be affected by surface water infiltration. The plastic kennel provided some protection to the well providing shelter from rainfall. <p>These damaged headworks are unlikely to impact the data collected or the interpretation of data.</p>
Field Observations	<p>Groundwater from 11 monitoring well locations (MW003, MW018, MW115, MW117D, MW120, MW123S, MW128, MW138, MW139, MW212 and MW232) had a sulphurous odour.</p> <p>Groundwater colour ranged from clear to black (MW220S).</p>

Item	Observations
	<p>No other visible or olfactory indications of contamination were observed during the sampling of the monitoring wells.</p> <p>MW131, MW101 and MW235S were blocked with tree roots. The blockages were removed with a decontaminated steel bailer and the HydraSleeve™ was subsequently deployed. HydraSleeves™ were not redeployed following sampling. Floating organics were excluded from the sample due to sampling from a HydraSleeve™. Field observations are presented Table T1 in Appendix B.</p>
Depth to Groundwater	Depth to groundwater ranged between 0.491 and 5.564 metres below top of casing (mBTC). Groundwater elevations were between 1.232 and 26.012 metres Australian Height Datum (mAHD). Groundwater gauging data are presented in Table T1 in Appendix A .
Groundwater Flow Direction	Groundwater contours and inferred groundwater flow directions in March/April 2021 are shown on Figure 4 in Appendix A . The inferred local groundwater flow direction is to the east-north-east.
Water Quality Parameters	<p>Groundwater water quality parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below:</p> <ul style="list-style-type: none"> • DO results ranged between 0.09 mg/L (MW101) to 7.56 mg/L (MW125I) indicating poorly to well oxygenated conditions. • EC ranged from 516 µS/cm (MW122) to 42,007 µS/cm (MW232) fresh to saline conditions. • pH ranged from 6.08 (MW217) to 8.68 (MW102). pH results generally indicated slightly acidic to slightly alkaline conditions. • ORP ranged from -144.2 mV (MW018) to 200.1 mV (MW116) indicating strongly reducing to mildly oxidising conditions. • Temperature ranged from 26.2°C (MW220S) to 33.9°C (MW139).

4.1.2 Groundwater Analytical Results

Of the 40 groundwater wells sampled during this event, 36 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**. Four off-Base samples exceeded the adopted drinking water guideline for PFOS+PFHxS and 19 samples, both on and off-Base, exceeded the adopted ecological guidelines for PFOS (**Table T2, Appendix B**).

Historical groundwater results presented in **Table T7, Appendix B**. There were no first-time detections or first-time exceedances of guideline values detected in this sampling event for groundwater samples. Groundwater sampling results were within the same order of magnitude as historically reported concentrations. Results were generally within the historical range of concentrations with the exception of MW114, MW139, MW135, MW105, MW128, MW120, MW072, MW138, MW002, MW117D, MW119, MW235S

4.2 Surface Water

4.2.1 Observations and Field Measurements

Table 11 Surface Water Observations and Field Measurements

Item	Observations
Access	<p>All surface water locations were accessible during the sampling event.</p> <p>SW133 was dry at the time of sampling and SW120 was dry at the time of follow up sampling, no surface water was collected from these locations.</p>

Item	Observations
Field Observations	<p>Surface water from 15 locations (SW109, SW110, SW119, SW121, SW128, SW129, SW130, SW136, SW139, SW140, SW203, SW205, SW217, SW233 and SW242) had an organic odour.</p> <p>Surface water from one location (SW232) had an odour of seawater.</p> <p>Surface water from one location (SW110) had a slight biological sheen on the surface.</p> <p>No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations.</p> <p>Field observations are presented Table T3 in Appendix B.</p>
Water Quality Parameters	<p>Surface water quality parameters were measured at the time of sampling. The readings are presented in Table T3 in Appendix B and are summarised below:</p> <ul style="list-style-type: none"> • DO results ranged between 2.72 mg/L (SW232) and 11.68 mg/L (SW135) indicating moderately to well oxygenated conditions. • EC ranged from 138.4 µS/cm (SW126) to 38,099 µS/cm (SW243) fresh to saline conditions. • pH ranged from 6.82 (SW110) to 9.92 (SW129). pH results generally indicated slightly acidic to alkaline conditions. • ORP ranged from 4.19 mV (SW220) to 380.5 mV (SW135) indicating mildly to strongly reducing conditions. • Temperature ranged from 22.9°C (SW139) to 36°C (SW136).

4.2.2 PFAS Surface Water Analytical Results

Of the 30 surface water samples, 25 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**. PFOS concentrations in 14 samples exceeded the adopted ecological guidelines and PFOS+PFHxS concentrations in five samples exceeded the adopted recreational use guidelines (**Table T4, Appendix B**).

An additional two surface water samples were collected during follow up sampling, both samples reported concentrations of PFAS compounds above the laboratory LOR and PFOS+PFHxS concentrations exceeding the adopted recreational use guideline. The concentration of PFOS in one sample also exceeded the adopted ecological guidelines.

It is noted that concentrations reported from the follow up sampling confirmed concentrations detected at these locations on 29 March 2021, therefore the concentrations detected on 29 March 2021 are reported as the first-time detections and new exceedances of guidelines, as presented in **Table 12** below.

Historical surface water results presented in **Table T8, Appendix B**. First-time detections and first-time exceedances of guideline values are also presented on **Figure 5A** in **Appendix A**.

Surface water sampling results were within the same order of magnitude as historically reported concentrations with the exception of SW109. Results were generally within the historical range of concentrations with the exception of SW109, SW129, SW130, SW139, SW120, SW132, SW217, SW220, SW233 and SW242.

Table 12 First-time Detections of PFAS or New Exceedances of Guidelines in Surface Water

Type	Surface Water Locations	PFOS concentration (µg/L)		PFOA concentration (µg/L)		PFOS+PFHxS concentration (µg/L)	
		Mar/Apr 2021	Historical maximum	Mar/Apr 2021	Historical maximum	Mar/Apr 2021	Historical maximum
First-time detections of PFOA or PFOS+PFHxS in surface water on-Base	SW130	N/A ¹		0.03	<0.01	1.27	0.33
	SW135			0.07	<0.01	5.64	0.68
First-time detections of PFOA or PFOS+PFHxS in surface water off-Base	There were no first-time detections in off-Base surface water.						
First-time exceedance of the NEMP (HEPA, 2020) 95% species protection ecological guideline values or recreational water guidelines in surface water on-Base	SW139	1.56	1.1	0.07	0.04	2.4	1.87
	SW132	1.39	1.5	0.08	0.08	2.55	1.12
	SW135	3.62	0.52	0.07	<0.01	5.64	0.68
First-time exceedance of guidelines in surface water off-Base	There were no first-time exceedances of guidelines in off-Base surface water.						

Concentrations have been rounded to two decimal places.

¹ First time detections of PFOS have not been included as per *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Department of Defence, 2021)

² Blue cells denote first time detection above LOR.

³ Yellow cells denote new exceedance of guideline values.

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 13 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible.
Field Observations	Sediment at 14 locations (SD121, SD129, SD130, SD134, SD135, SD136, SD139, SD140, SD144, SD217, SD220, SD232, SD242 and SD243) had an organic odour. No other visible or olfactory indications of contamination were observed during the sampling of sediment locations. Sediment logging data are presented in Table T5, Appendix B .

4.3.2 PFAS Sediment Analytical Results

Of the 31 sediment samples, 28 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T6 in Appendix B**.

Historical sediment results presented in **Table T9, Appendix B**. First-time detections of PFOA and PFOS+PFHxS in sediment are presented in **Table 14** below and on **Figure 5B in Appendix A**.

Sediment sampling results were within the same order of magnitude as historically reported concentrations with the exception of SD119. Results were generally within the historical range of concentrations with the exception of SD119, SD135, SD136, SD205, SD233, SD242 and SD243.

There are no human health or ecological guideline values available for sediment.

Table 14 First-time Detections of PFAS in Sediment

Sediment Locations	PFOA concentration (mg/kg)	PFOS+PFHxS concentration (mg/kg)
SD120	<0.0002	0.0014
SD139	0.0005	0.894
SD140	0.0004	0.0547
SD144	<0.0010	0.361^
SD205	<0.0002	0.007
SD211	<0.0002	0.0015
SD212	<0.0002	0.0005#
SD233	0.0002	0.029
SD243	<0.0002	0.0009

Concentrations have been rounded to four decimal places.

*Blue cells denote first time detection above LOR.

^Location SD144 was sampled for the first time during this sampling event. This first-time detection is only data available for this location.

#Location SD212 was sampled in the previous monitoring round and excluded from the report due to landholder confidentiality issues. Concentrations of PFOS+PFHxS were detected above LOR in October 2020 however this is the first time results have been included in the factual report so this is identified here as a first-time detection.

5.0 Summary and Next Sampling Event

5.1 Summary of Monitoring Event

The wet season monitoring event was completed between 26 March 2021 and 13 May 2021 at the Base and surrounding suburbs, including sampling of groundwater, surface water and sediment. **Table 15** summarises findings of the March/April 2021 sampling event and the recommended actions.

Table 15 Summary of Sampling Event

Item	Comment	Recommended Actions
<u>Groundwater:</u> Access to sampling locations and monitoring well network condition.	All of the 40 monitoring well locations were accessible and able to be sampled.	Ongoing monitoring in accordance with the OMP.
	The casing of MW003 and MW115 was bent below ground level. A sample was collected using a HydraSleeve™ without a collar.	Continue monitoring using a HydraSleeve™ without a collar.
	The monument of MW121 was loose due to a wash out of the ground below the concrete plinth. The concrete plinth at the base of the monument of MW125S is cracked.	Repair concrete plinth on MW121 and MW125S.
	Data loggers were present in the following off-Base wells: <ul style="list-style-type: none"> MW205S MW232 MW235S MW236S. Data loggers were removed to deploy HydraSleeves™ and replaced in the well immediately, on top of the HydraSleeve™. The data loggers were removed a second time during retrieval of the HydraSleeves™ and immediately replaced. A note was left for the owner of the data loggers in each well collar detailing date and time of removal and contact information. HydraSleeves™ were not redeployed in wells with data loggers.	Defence has advised that the owner of the data loggers is unknown. It is recommended that the data loggers be removed and the data downloaded. AECOM to deploy HydraSleeves™ in these wells at the beginning of the subsequent sampling round.
<u>Sediment/Surface Water:</u> Access to sampling locations.	All 31 surface water and sediment locations were accessible. SW133 was dry at the time of sampling and SW120 was dry at the time of follow up sampling, no surface water sample was able to be collected during this sampling round.	Continue monitoring in accordance with the OMP.
<u>Analytical Results</u>	PFAS compounds were detected above laboratory LOR in 36 groundwater samples, 25 surface water samples and 28 sediment samples.	Continue monitoring in accordance with the OMP.
<u>Data Validation</u>	One rinsate blank returned detections of PFOS and PFHxS.	Field decontamination protocols will be reviewed prior to the next sampling event.

Item	Comment	Recommended Actions
<p><u>First-time detections of PFOA or PFOS+PFHxS</u></p>	<p><u>Groundwater:</u> There were no first-time detections of PFOS, PFOA or PFOS+PFHxS in groundwater.</p> <p><u>Surface Water:</u> Results showed first time detection of PFOA at two on-Base sampling locations (SW130 and SW135) during this sampling round.</p> <p><u>Sediment:</u> PFOA was detected for the first time at two on-Base (SD139 and SD140) and one off-Base (SD233) sediment sampling location during this sampling round.</p> <p>PFOS+PFHxS was detected for the first time at two on-Base (SD120 and SD144) and four off-Base (SD205, SD211, SD212 and SD243) sediment sampling locations during this sampling round.</p>	<p>Continue monitoring in accordance with the OMP.</p>
<p><u>First-time exceedances of screening criteria for PFOS, PFOA or PFOS+PFHxS</u></p>	<p><u>Groundwater:</u> There were no first-time exceedances of guidelines detected in groundwater.</p> <p><u>Surface Water:</u> Three on-Base sampling locations (SD139, SD132 and SD135) showed first-time exceedance of the NHMRC (2019) guideline for recreational water.</p>	<p>Continue monitoring in accordance with the OMP.</p>

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for late August 2021.

5.3 Upcoming Annual Interpretive Report

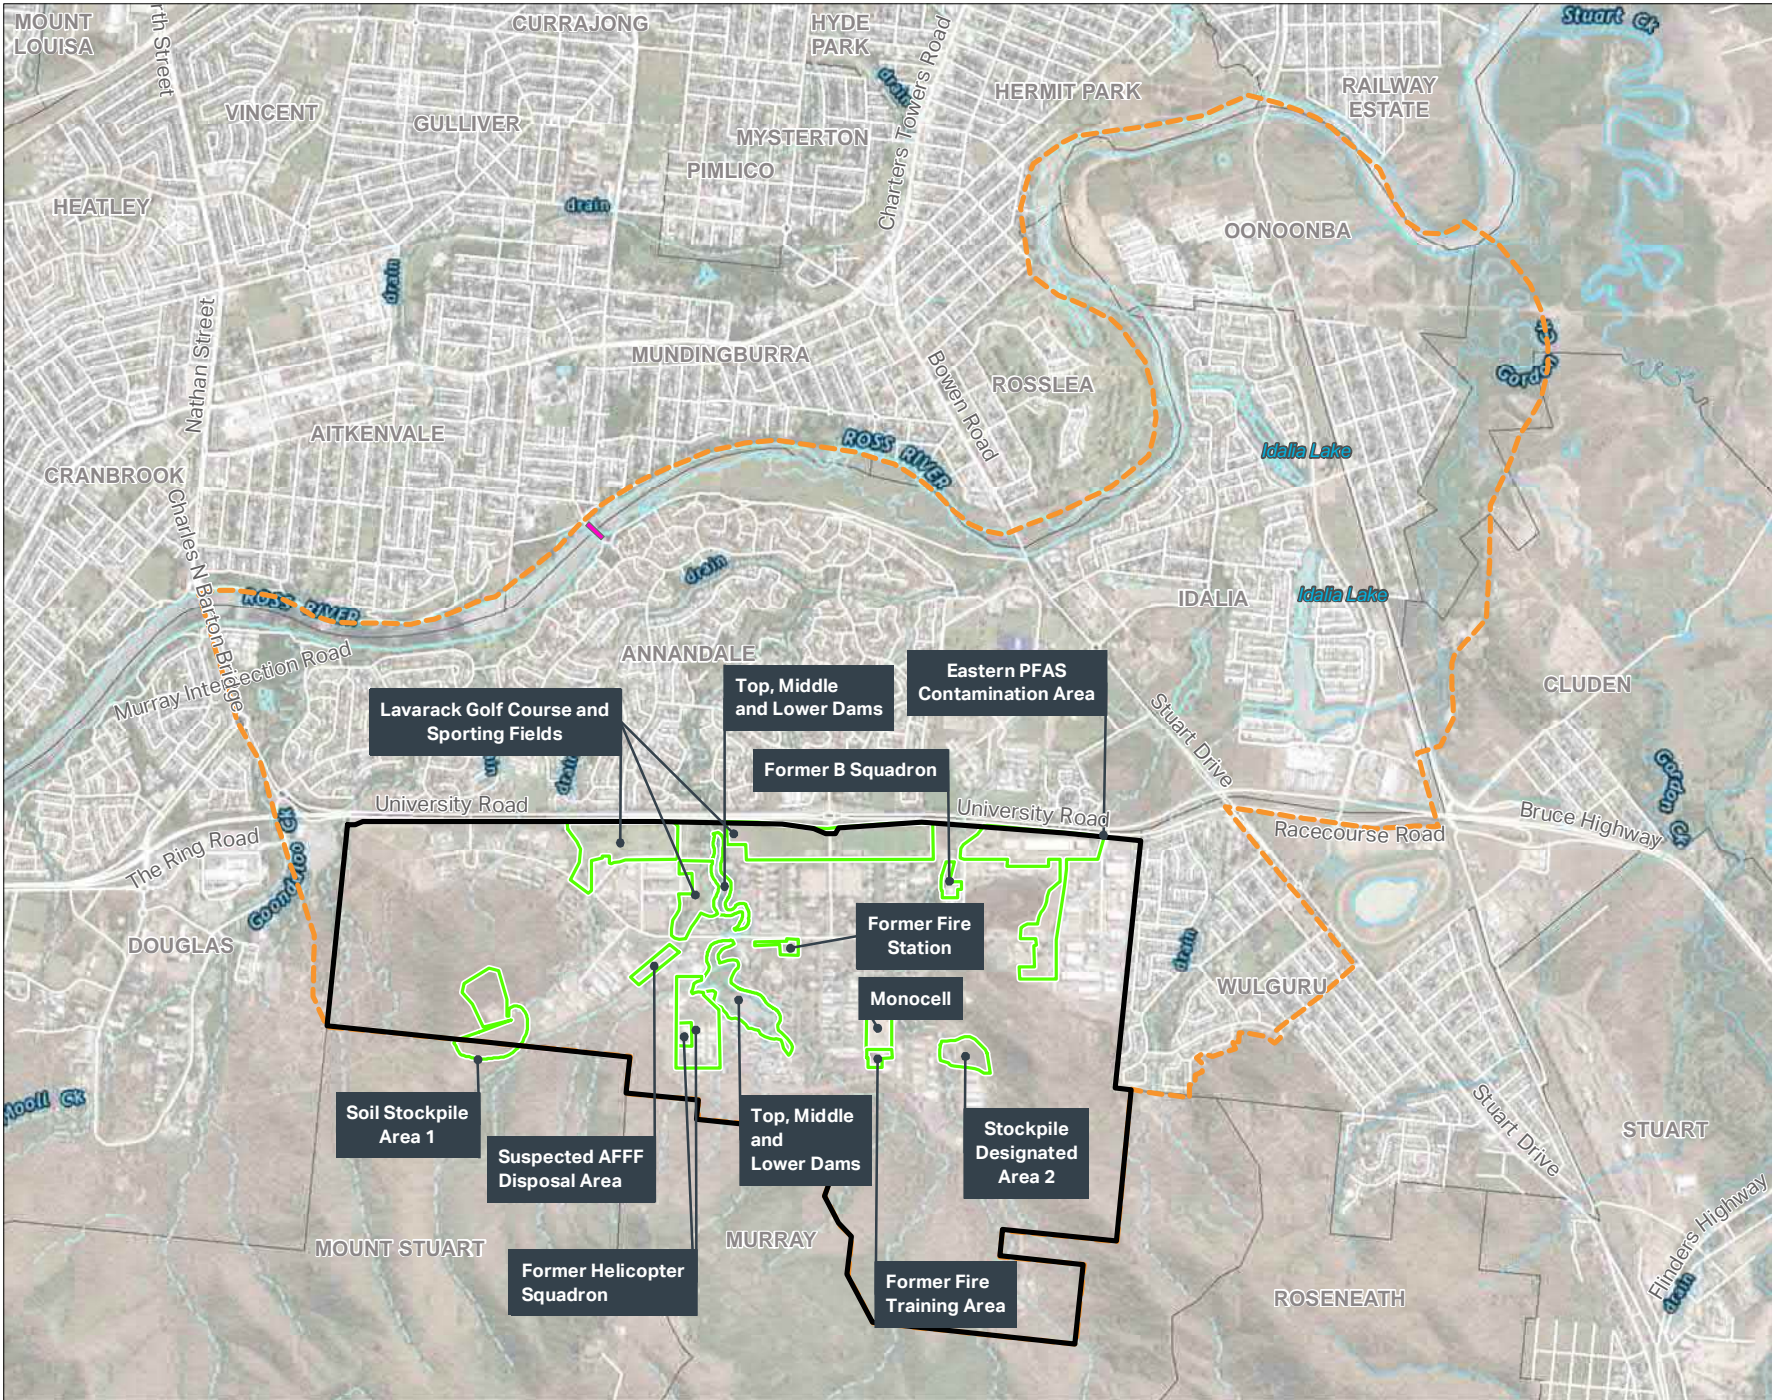

The next annual interpretive report is scheduled for June 2021.

mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Eh - Redox Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre
 µS/cm - microsiemens per centimeter

NTU - Nephelometric Turbidity Unit
 °C - degrees Celcius
 "-" denotes no analysis taken
 mV - millivolt

* Depth at which collar of the HydraSleeve was installed.

Table T3: Surface Water Quality Parameter Results

DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Redox - Redox Oxidation Potential
 Temp - Temperature
 NTU - Nephelometric Turbidity Unit
 mg/L - milligrams per litre
 µS/cm - microsiemens per centimetre
 mV - millivolt
 °C - degrees Celcius
 "-" denotes no analysis taken

Table T5: Sediment Observation Results

Location ID	Date	Sample Description	Odour	Comment
Eastern PFAS Contamination Area				
SD119	29/03/2021	Silty SAND. Fine sands, dark brown, soft, saturated.	No odour	Concrete drain. Water flowing slowly.
SD121	29/03/2021	Silty CLAY. Low plasticity, soft, grey and brown, moist, with organic materials.	Organic odour	Concrete drain. Water flowing slowly.
Former Fire Station				
SD109	29/03/2021	Sandy gravelly CLAY. Low plasticity, soft, angular sands and gravels, wet, with some organic materials.	No odour	Open drain. Not flowing.
SD110	29/03/2021	Sandy CLAY. Low plasticity, firm, grey with orange mottling, moist.	No odour	Open drain. Not flowing.
Lavarack Golf Course & Sporting Field				
SD129	26/03/2021	Silty, sandy GRAVEL. Medium to coarse sand and gravels, balck, with organic material.	Organic odour	Rock drain. Water not flowing.
SD130	26/03/2021	Silty, gravelley SAND. Black sand, orange/brown gravels, saturated, with organic material.	Organic odour	Rock drain. Water not flowing.
Top, Middle and Lower Dams				
SD139	29/03/2021	Sandy SILT. Black, saturated, with fine sands and organic material.	Organic odour	Dam. Water not flowing.
SD140	29/03/2021	Clayey SILT. Soft, dark grey, with some fine sands and organic material.	Organic odour	Dam. Water not flowing.
SD144	13/05/2021	Silty SAND. Fine to coarse sand with medium sub-angular gravels, black, saturated, with organic material.	Organic odour	Dam. Water not flowing.
Remaining On-Base				
SD113	29/03/2021	Gravelly SAND. Loose, brown/orange, saturated, with traces of silt.	No odour	Creek. Water flowing.
SD120	29/03/2021	Gravelly SAND. Brown, loose,saturated, with traces of silt.	No odour	Ephemeral creek. Water flowing slowly.
Base Boundary				
SD126	26/03/2021	Sandy CLAY. Medium plasticity, grey, with organic material.	No odour	Rock drain. Water not flowing.
SD128	26/03/2021	Silty CLAY. Medium plasticity, firm, grey, with some sand and gravels, with some organic material.	No odour	Rock drain. Water not flowing.
SD132	1/04/2021	Sanyd CLAY. Fine sands, grey with brown/orange mottling, saturated, with some angular gravels.	No odour	Rock drain. Water flowing.
SD133	29/03/2021	Sandy gravelly CLAY. Low plasticity, firm, fine sands, medium to coarse gravels, grey/brown, moist, with organic materials and some biota (ants and worms)	No odour	Concrete drain. Water not flowing.
SD134	1/04/2021	Sandy SILT. Fine to medium grain sands, dark grey/brown, saturated, with organic materials.	Organic odour	Earthen drain. Water not flowing.
SD135	29/03/2021	Silty SAND. Loose, medium grain, brown, saturated, with organic materials.	Organic odour	Concrete drain. Water flowing slowly.
SD136	26/03/2021	Sandy SILT. Soft, dark grey/brown, moist, with organic material.	Organic odour	Concrete drain. Water not flowing.
Off-Base				
SD203	29/03/2021	Silty SAND. Fine sands, dark brown, firm, saturated, with organic materials	No odour	Creek. Water not flowing.
SD205	29/03/2021	Sandy SILT. Fine to medium sands, loose, saturated, with organic materials.	No odour	High tide. Tidal creek.
SD211	1/04/2021	Silty SAND. Loose to firm, medium sands, dark grey, saturated, with organic materials.	No odour	Rock drain. Water not flowing.
SD212	1/04/2021	Silty SAND. Loose, fine to medium sands, grey/brown, saturated, with organic materials.	No odour	Concrete drain. Water not flowing.
SD217	29/03/2021	Sandy SILT. Fine sands, dark grey, firm, saturated, with organic materials	Organic odour	Creek. Water not flowing.
SD220	1/04/2021	Silty sandy CLAY. Low plasticity, very fine sands, grey/brown with orange mottling, wet, with organic materials.	Organic odour	Earthen drain. Water not flowing.
SD227	26/03/2021	Silty SAND. Fine, loose, dark grey with black organic inclusions, saturated, with organic material.	No odour	Ross River. Immediately downstream of weir. Water not flowing
SD232	29/03/2021	SILT. Soft, black, saturated, with organic material.	Organic odour	Creek. Water not flowing.
SD233	29/03/2021	Sandy SILT. Fine sands, dark brown, firm, saturated, with organic materials	No odour	Creek. Water not flowing.
SD242	29/03/2021	Silty CLAY. Soft, saturated, dark grey, with angular gravels and fine to coarse sand, with organics.	Organic odour	Lake. Water not flowing.
SD243	29/03/2021	Silty CLAY. Dark grey, saturated, with fine sands and inclusions of high plasticity clay.	Organic odour	Lake. Water not flowing.
SD244	26/03/2021	Gravelly SAND. Coarse sand, loose, coarse angular gravels, orange brown, saturated, with organic material.	No odour	Ross River. Downstream of Nathan St bridge. Water not flowing.
SD245	26/03/2021	Silty SAND. Fine, loose, dark grey, saturated, with organic material.	No odour	Ross River. Immediately upstream of weir. Water not flowing

Table T8: Historical Surface Water Results

Table with columns for Location ID, Sample Date, and various PFAS compounds (e.g., PFOA, PFDA, PFDoDA, PFHxA, PFHxDA, PFTrDA, PFUnDA, PFOS, PFDS, PFBA, PFHRA, PFPeA, PFHpA, PFNS, PFPS, PFMS, PFBS, PFPrs, PFHs, PFHpS, PFOS, PFDS, PFBA, PFHRA, PFPeA, PFHpA, PFNS, PFPS, PFMS, PFBS, PFPrs, PFHs, PFHpS). Rows include data for sites SW132, SW134, SW135, SW136, Off-Base, SW203, SW205, SW211, SW212, SW217, SW220, SW227, and SW233.

Appendix C

Analytical Data Validation

DATA VALIDATION REPORT

Project No.: 60612487	Validation by: RR	Date: 02/07/2021
Client: Department of Defence		
Site: Lavarack Barracks Townsville (0229)		
Matrix type: Groundwater, surface water, sediment	Data verified by: [REDACTED]	Date: 01/06/2021
No. of primary samples: 40 groundwater, 30 surface water, 31 sediment Follow Up Sampling: 2 surface water		
Laboratory: ALS (Brisbane), NMI (Sydney)	Project Manager: [REDACTED]	
Lab reference: ET2101548, ET2101561, ET2101593, ET2101594, ET2101595, RN1310407 Follow Up Sampling: ET2102888, RN1320071		

Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.
--------------------	--

Field QA/QC

Sampling personnel	Sampling was conducted by AECOM personnel between 26 March and 1 April 2021 and also on 13 May 2021. Follow up sampling was conducted on 22 June 2021.
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection.
Chain of Custody (COC)	COC documents completed as per AECOM procedures.
Rinsate Blank	<p>Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (eight in total). Rinsate blanks were collected from the decontaminated interface probe (0229_QC302_210330, 0229_QC303_210331 and 0229_QC304_210331) and surface water sampling cup (0229_QC300_210326, 0229_QC301_210329, 0229_QC305_210401, 0229_QC306_210513 and 0229_QC300_210622).</p> <p>PFHxS and PFOS were detected in 0229_QC301_210329. This rinsate sample was taken off the surface water sampling stainless-steel scoop following sampling of SW135. Sample SW135 was the last sample collected at the end of the fieldwork day and concentrations in the surface water sample were higher than previously reported. Given there is a detection in this rinsate sample, there is some risk of cross-contamination for surface water samples collected on this day (29/03/2021). Field decontamination protocols will be reviewed prior to the next sampling event.</p> <p>All concentrations in the rinsate sample collected during follow up sampling on 22/06/2021 were reported below the LOR for all analytes tested (see Table C4).</p> <p>Concentrations were reported below the LOR for all analytes tested in all other rinsate blanks (see Table C4).</p>
Trip Blanks	Trip blank samples were submitted to the laboratory at a rate of one per batch of samples (four in total). Concentrations were reported below the LOR for all analytes tested in all trip blanks (Table C4).
Field Blank	One field blank sample was collected during follow up sampling on 22/06/2021 to verify sample collection procedures and lab provided rinsate water and sample bottles. Concentrations were reported below the LOR for all analytes tested in the field blank (see Table C4).

Eskies to Laboratory	A total of five eskies of samples in three deliveries were submitted to ALS across the sampling event.
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples (five duplicates and triplicates for groundwater, three duplicates and triplicates for surface water and three duplicates and triplicates for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for groundwater and surface water. The 10% target frequency for duplicate and triplicates was not reached for sediment with only three out of a required four pairs collected and analysed. All sediment RPDs for duplicate and triplicate samples analysed were within control limits.
Handling and preservation	<p>Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported at 14.5 °C, 14.5 °C, 14.5 °C, 10.5 °C, 8.0 °C, 6.3 °C and 5.7 °C.</p> <p>All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.</p>
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F .
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none"> Matrix spikes for PFAS in water (0.0%) were below the expected rate of 5% in ET2101594.
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits.
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none"> Perfluorobutane sulfonic acid (PFBS), perfluoropentane sulfonic acid (PFPeS), perfluorohexane sulfonic acid (PFHxS), perfluorooctane sulfonic acid (PFOS), Perfluoropentanoic acid (PFPeA) and perfluorohexanoic acid (PFHxA) in sample EC2108502-004, batch ET2101548, was not determined due to background level being greater than or equal to four times the spike level. Recovery of perfluorodecane sulfonic acid (PFDS) and 10:2 fluorotelmer sulfonic acid (10:2 FTS) in sample 0229_SD203_210329, batch ET2101561, was less than the lower data quality objective. PFHxS and PFOS in sample 0229_QC100_210622, batch ET2102888, was not determined due to background level being greater than or equal to four times the spike level.
Surrogate spike recovery	Surrogate spike recoveries were greater than the upper data quality objective in ET2101593 for PFOS and PFOA.

QA/QC Data Evaluation

Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	<p>Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.</p> <p>LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples:</p> <ul style="list-style-type: none">• 0229_SD130_210326 and 0229_SD128_210326 in ET2101548.• 0229_QC105_210329, 0229_SD140_210329 and 0229_SW109_210329 in ET2101561.• 0229_SD211_210401 in ET2101595.• 0229_MW212_210331, 0229_MW115_210331, 0229_SD220_210401, 0229_SD134_210401, 0229_MW117S_210330, 0229_MW217_210331, 0229_MW124_210331, 0229_MW072_210331, 0229_MW128_210331, 0229_MW105_210331, 0229_MW074_210331 and 0229_QC108_210331 in ET2101593.• 0229_SD144_210513 in ET2102333.
Field duplicate RPDs	RPDs for groundwater, surface water, and sediment are reported in Tables C1, C2, and C3 respectively. Field duplicate RPDs were reported within control limits.
Field triplicate RPDs	<p>Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none">• PFBS, PFPeS, PFHxS, PFHpS, PFOS, PFDS, PFBA, PFHxA, PFPeA, PFHpA and PFOA in 0229_MW072_210331 and 0229_QC208_210331, and 0229_MW018_210331 and 0229_QC209_210331. <p>RPDs for the corresponding duplicates (0229_QC108_210331 and 0229_QC109_210331) were within acceptable ranges. All triplicate concentrations, with the exception of PFOS in 0229_QC208_210331, and PFOS and PFHxS in 0229_QC209_210331, were within the same order of magnitude compared to the concentrations in the primary sample.</p>

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
 **Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 100 (1 - 10 x EQL); 50 (10 - 20 x EQL); 30 (> 20 x EQL))
 ***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. All content is redacted.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: The LOR of particular analytes for samples '0229_SD130_210326' and '0229_SD128_210326' have been raised due to matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- **Amendment (8/04/2021): This report has been amended as a result of a request to change sample identification (IDs) received from [REDACTED] on 7.4.21, for samples #1 and s#17. All analysis results are as per the previous report.**
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QUALITY CONTROL REPORT

Work Order : ET2101548
Amendment : 1

Page : 1 of 10

Client : AECOM Australia Pty Ltd

Laboratory : Environmental Division Townsville

Contact Address [Redacted]

Contact Address [Redacted]

Telephone [Redacted]
Project : QLD_0229_PFASOMP_20

Telephone [Redacted]
Date Samples Received : 26-Mar-2021

Order number : -

Date Analysis Commenced : 31-Mar-2021

C-O-C number : 20735

Issue Date : 08-Apr-2021

Sampler [Redacted]

Site : QLD_0229

Quote number : TV/007/21 - Compass

No. of samples received : 20

No. of samples analysed : 20

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Contains redacted information.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIPT NOTIFICATION (SRN)

Work Order : ET2101548

Client : AECOM Australia Pty Ltd

Quote number : ET2021AECOMAU0001 (TV/007/21 - Compass)
QC Level : NEPM 2013 B3 & ALS QC Standard

Dates

Date Samples Received : 26-Mar-2021 16:45
Client Requested Due Date : 07-Apr-2021
Issue Date : 31-Mar-2021
Scheduled Reporting Date : 07-Apr-2021

Delivery Details

Mode of Delivery : Client Drop Off
No. of coolers/boxes : 1
Receipt Detail : LARGE ESKY
Security Seal : Intact
Temperature : 8.0°C - Ice present
No. of samples received / analysed : 20 / 20

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
29/3/21: SRN has been resent to acknowledge the change in sample IDs to remove the prefix "QLD_" from all samples. For any further information regarding these adjustments please contact client services at [Redacted]
31.3.21: SRN has been resent to acknowledge change of sample ID for sample #14 as requested by the client via email. For any further information regarding these adjustments please contact client services at [Redacted]
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. All content is redacted.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample 0229_SD203_210329 shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP231X PFAS: The LOR for particular analytes for samples '0229_QC105_210329' and '0229_SD140_210329' have been raised due to matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment-1 (13/05/2021): This report has been amended as a result of a request to reduce the number of samples reported. All analysis results are as per the previous report.
- EP231X PFAS: Sample '0229_SW109_210329' required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly and surrogate recoveries not determined.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QUALITY CONTROL REPORT

Work Order : ET2101561

Page : 1 of 11

Amendment : 1

Client : AECOM Australia Pty Ltd

Laboratory : Environmental Division Townsville

Contact Address [Redacted]

Contact Address [Redacted]

Telephone : ---
Project : QLD_0229_PFASOMP_20

Telephone : ---
Date Samples Received : 29-Mar-2021

Order number : -

Date Analysis Commenced : 31-Mar-2021

C-O-C number : 20785

Issue Date : 13-May-2021

Sampler [Redacted]

Site : QLD_0229

Quote number : TV/007/21 - Compass

No. of samples received : 40

No. of samples analysed : 38

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2101561--011	0229_SD203_210329	Perfluorodecane sulfonic acid (PFDS)	335-77-3	57.5 %	59.0-134%	Recovery less than lower data quality objective
EP231D: (n:2) Fluorotelomer Sulfonic Acids	ET2101561--011	0229_SD203_210329	10:2 Fluorotelomer sulfonic acid (10:2 FTS)	120226-60-0	39.2 %	70.0-130%	Recovery less than lower data quality objective

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	19	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	19	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received : 29-Mar-2021 16:44
Client Requested Due Date : 13-Apr-2021
Issue Date : 30-Mar-2021
Scheduled Reporting Date : 13-Apr-2021

Delivery Details

Mode of Delivery : Client Drop Off
No. of coolers/boxes : 2
Receipt Detail : LARGE ESKIES
Security Seal : Not Available
Temperature : 6.3, 8.0°C - Ice present
No. of samples received / analysed : 40 / 40

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
30.3.21: SRN has been resent to acknowledge due date change. For any further information regarding these adjustments please contact client services at
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Proactive Holding Time Report

Sample(s) have been received within the recommended holding times for the requested analysis.

Requested Deliverables

CERTIFICATE OF ANALYSIS

Work Order : ET2101593
 Amendment : 1
 Client : AECOM Australia Pty Ltd
 Contact : [Redacted]
 Address : [Redacted]
 Telephone : [Redacted]
 Project : QLD_0229_PFASOMP_20
 Order number : -
 C-O-C number : 20924
 Sampler : [Redacted]
 Site : QLD_0229
 Quote number : TV/007/21 - Compass
 No. of samples received : 55
 No. of samples analysed : 55

Page : 1 of 33
 Laboratory : Environmental Division Townsville
 Contact : [Redacted]
 Address : [Redacted]
 Telephone : [Redacted]
 Date Samples Received : 01-Apr-2021 11:55
 Date Analysis Commenced : 07-Apr-2021
 Issue Date : 19-Apr-2021 15:02

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: The LORs of PFBA, PFPeA and PFHxA have been raised for sample '0229_MW212_210331' due to matrix interference.
- EP231X PFAS: The LOR of PFBA has been raised for sample '0229_MW115_210331' due to matrix interference.
- EP231X PFAS: Samples '0229_SD220_210401' and '0229_SD134_210401' were diluted due to matrix interference. LOR adjusted accordingly.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (19.4.21): This report has been amended as a result of a request to change sample identification number (IDs) received from [REDACTED] on 19.4.21, for sample #40. All analysis results are as per the previous report.
- EP231X PFAS: Particular samples required dilution prior to analysis due to matrix interferences. LOR values have been adjusted accordingly and surrogate recoveries not determined.
- EP231X PFAS: Sample '0229_MW117S_210330' required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- EP231X-INJ: Samples '0229_MW217_210331' and '0229_MW124_210331' required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X-INJ PFAS by LCMSMS: Particular samples have been tested to the legacy QSM 5.1 aligned, NATA accredited method due to sample matrix being unsuitable for SPE extraction (high sediment content).
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

Telephone : [Redacted]

Project : QLD_0229_PFASOMP_20

Date Samples Received : 01-Apr-2021

Order number : -

Date Analysis Commenced : 07-Apr-2021

C-O-C number : 20924

Issue Date : 19-Apr-2021

Sampler [Redacted]

Site : QLD_0229

Quote number : TV/007/21 - Compass

No. of samples received : 55

No. of samples analysed : 55

Accreditation No. 825 Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
• Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
• Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Contains redacted information.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Laboratory sample ID	Sample ID	Method: Compound	CAS Number	Matrix Spike (MS) Report

Amendment	: 1		
Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 01-Apr-2021
Site	: QLD_0229	Issue Date	: 19-Apr-2021
Sampler	: [REDACTED]	No. of samples received	: 55
Order number	: -	No. of samples analysed	: 55

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Regular Sample Surrogates

Sub-Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Samples Submitted							
EP231S: PFAS Surrogate	ET2101593-039	0229_MW217_210331	13C4-PFOS	----	231 %	65.0-140 %	Recovery greater than upper data quality objective
EP231S: PFAS Surrogate	ET2101593-055	0229_MW124_210331	13C4-PFOS	----	476 %	65.0-140 %	Recovery greater than upper data quality objective
EP231S: PFAS Surrogate	ET2101593-039	0229_MW217_210331	13C8-PFOA	----	221 %	71.0-133 %	Recovery greater than upper data quality objective
EP231S: PFAS Surrogate	ET2101593-055	0229_MW124_210331	13C8-PFOA	----	502 %	71.0-133 %	Recovery greater than upper data quality objective

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: * = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Temperature : 14.5°C - Ice present
No. of samples received / analysed : 55 / 55

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please be advised that for some samples with extra analysis added in Compass, they have been logged as per bottles received.
6.4.21: SRN has been resent to acknowledge changes in sampling dates as per sample IDs. For any further information regarding these adjustments please contact client services at
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.
All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
• Analytical Results
• Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. All rows are redacted.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2101594	Page	: 1 of 4
Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 01-Apr-2021
Site	: QLD_0229	Issue Date	: 12-Apr-2021
Sampler	: [REDACTED]	No. of samples received	: 1
Order number	: -	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	4	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received : 01-Apr-2021 11:55
Client Requested Due Date : 13-Apr-2021

Issue Date : 06-Apr-2021
Scheduled Reporting Date : 13-Apr-2021

Delivery Details

Mode of Delivery : Client Drop Off
No. of coolers/boxes : 1
Receipt Detail : ESKY

Security Seal : Not Available
Temperature : 14.5°C - Ice present
No. of samples received / analysed : 1 / 1

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.
All analysis will be conducted by [Redacted] NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: The LOR of PFDoDA for sample "0229_SD211_210401" has been raised due to sample matrix interferences.
- EP231X PFAS: Sample '0229_SD211_210401' required dilution due to matrix interference. LOR values have been adjusted accordingly and surrogate recovery not determined.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Telephone : [Redacted]

Date Samples Received : 01-Apr-2021

Date Analysis Commenced : 07-Apr-2021

Issue Date : 14-Apr-2021

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

[Redacted]	[Redacted]	[Redacted]

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2101595	Page	: 1 of 5
Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 01-Apr-2021
Site	: QLD_0229	Issue Date	: 14-Apr-2021
Sampler	: [REDACTED]	No. of samples received	: 4
Order number	: -	No. of samples analysed	: 4

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.
All analysis will be conducted by [redacted] NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Date Samples Received : 17-May-2021 17:17
Date Analysis Commenced : 19-May-2021
Issue Date : 25-May-2021 16:32

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. All content is redacted.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample '0229_SD144_210513' was diluted due to matrix interference. LOR adjusted accordingly.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All analysis will be conducted by [REDACTED], NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 17-May-2021
Site	: QLD_0229	Issue Date	: 25-May-2021
Sampler	: [REDACTED]	No. of samples received	: 4
Order number	: -	No. of samples analysed	: 4

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received : 17-May-2021 17:17
Client Requested Due Date : 26-May-2021
Issue Date : 18-May-2021
Scheduled Reporting Date : 26-May-2021

Delivery Details

Mode of Delivery : Client Drop Off
No. of coolers/boxes : 1
Receipt Detail : LARGE ESKY
Security Seal : Not Available
Temperature : 10.5°C
No. of samples received / analysed : 4 / 4

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All analysis will be conducted by [redacted], NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 6 of 9
Report No. RN1310407

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW
Accreditation No. 198

14-APR-2021

SAMPLE RECEIVED CONDITION

Date samples received: 7-APR-2021

Sample received in good order: Yes

NMI Quotation no. provided: QLD_0229_PFASOMP_20

Client purchase order number: 60612487_3_1

Temperature of samples: Chilled

Comments:

Mode of Delivery: Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at <https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

Date Samples Received : 23-Jun-2021 08:45
Date Analysis Commenced : 25-Jun-2021
Issue Date : 30-Jun-2021 14:40

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. All rows are redacted.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All remaining analysis will be conducted by [REDACTED], NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: WATER

Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	[REDACTED]	Telephone	[REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 23-Jun-2021
Site	: 0229	Issue Date	: 30-Jun-2021
Sampler	[REDACTED]	No. of samples received	: 6
Order number	: 0229	No. of samples analysed	: 6

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: WATER

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2102888--002	0229_QC100_210622	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2102888--002	0229_QC100_210622	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	6	16.67	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	6	16.67	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	6	16.67	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	6	16.67	5.00	✔	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***Samples were originally received by [Redacted] on 22/06/21, and forwarded to [Redacted] for analysis.**
- **23.6.21: SRN has been resent to acknowledge changes in sample IDs as requested by the client. For any further information regarding these adjustments please contact client services at [Redacted]**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020) at Lavarack Barracks, Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**. The OMP (Department of Defence, 2020) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, March/April and August in 2021, February/March and August 2022 and February/March 2023.

These sampling events include the following:

- Groundwater sampling of 31 on-Base wells at Lavarack Barracks and nine off-Base wells in the suburbs of Annandale, Idalia and Wulguru.
- Sediment sampling at 18 on-Base locations at Lavarack Barracks and 13 off-Base locations in the Ross River and waterways in Annandale and Idalia with co-located surface water sampling when water is present.

Following each sampling event, a factual report will be prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the post dry-season sampling event completed in August 2021, specifically highlighting first-time detections and/or first-time exceedances of human health and ecological screening criteria for perfluorooctane sulfonate (PFOS) + perfluorohexane sulfonic acid (PFHxS) and perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the Defence (2020) PFAS OMP factual report guidance, v0.2, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the scope of works for the August 2021 sampling event in accordance with the sampling and analysis quality plan (SAQP) (AECOM, 2021).

2.0 Scope of Work

The sampling event at Lavarack Barracks was completed in general accordance with the SAQP (AECOM, 2021). In summary, the scope of works for this sampling event included:

- Obtaining permission to work in public spaces where some sampling locations are situated.
- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP) (HEPA, 2020);
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
 - Defence Routine Environment Water Quality Monitoring Program;
 - AS/NZ 5667:1998 Water quality – Sampling;
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality; and
 - Relevant State regulatory guidelines.
- Gauging of groundwater level in monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations).
- Collection of groundwater samples at 40 locations including 31 on-Base locations, and nine off-Base locations (refer to **Table 1** below, and **Figure 2** in **Appendix A**).
- Collection of co-located surface water and sediment samples at 31 locations including 18 on-Base and 13 off-Base locations (refer to **Table 2** and **Table 3** below, and **Figure 3** in **Appendix A**). It is noted that 11 surface water locations were dry during the sampling round and no surface water samples were collected from these locations. No sediment was present at one of the dry locations (in a cobble drain) therefore a sample was not collected from this location.
- Collection of intra- and inter-laboratory duplicate samples at a rate of one in 10 primary samples, one rinsate sample per fieldwork day, and one trip-blank submitted to the laboratory per sample batch.
- Analysis of all samples for a suite of 28 PFAS analytes at the standard limit of reporting (LOR).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Source Area	Monitoring Well ID
Eastern PFAS Contamination Area	MW018, MW114, MW115, MW116, MW139
Former B Squadron	MW135
Former Fire Station	MW105, MW128
Former Fire Training Area	MW131
Former Helicopter Squadron	MW102
Lavarack Golf Course and Sporting Fields	MW065, MW120, MW121, MW122, MW123I, MW123S
Monocell	MW072, MW074, MW106
Stockpile Designated Area 2	MW141
Suspected Aqueous Film Forming Foam (AFFF) Disposal Area	MW101
Top, Middle and Lower Dams	MW138

Source Area	Monitoring Well ID
Base Boundary – On-Base	MW002, MW003, MW117D, MW117S, MW118, MW119, MW124, MW125I, MW125S
Off-Base	MW205S, MW212, MW217, MW220S, MW226, MW232, MW233, MW235S, MW236S

Table 2 Surface Water Sampling Locations

Source Area	Surface Water Location ID
Eastern PFAS Contamination Area	SW119, SW121
Former Fire Station	SW109 ² , SW110 ²
Lavarack Golf Course and Sporting Fields	SW129 ² , SW130 ²
Top Middle and Lower Dams ¹	SW139, SW140, SW144
Remaining on-Base	SW113 ² , SW120 ²
Base Boundary	SW126 ² , SW128 ² , SW132 ² , SW133 ² , SW134, SW135, SW136 ²
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245

¹ Location SW144 has been sampled instead of SW137 (which was specified in the SAQP AECOM, 2021)). The reason for the change is provided in **Table 8**.

² Locations were dry at the time of sampling and no surface water sample was collected.

Table 3 Sediment Sampling Locations

Source Area	Sediment Location ID
Eastern PFAS Contamination Area	SD119, SD121
Former Fire Station	SD109, SD110
Lavarack Golf Course and Sporting Fields	SD129, SD130
Top Middle and Lower Dams ¹	SD139, SD140, SD144
Remaining on-Base	SD113, SD120
Base Boundary	SD126, SD128, SD132 ² , SD133, SD134, SD135, SD136
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245

¹ Location SD144 has been sampled instead of SD137 (which was specified in the SAQP (AECOM, 2021)). The reason for the change is provided in **Table 8**.

² SD132 had high proportion of large cobbles and no sediment was present to be collected from this location.

3.0 Methodology

The methodology used for the August 2021 sampling event was in general accordance with the SAQP (AECOM, 2021) and is summarised below. Deviations from the SAQP are discussed in **Section 3.6**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	<p>Depth to groundwater was measured at the beginning of the sampling round to facilitate gauging all wells within the shallow aquifer on the same day.</p> <p>The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.</p>
Water Quality Parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F.</p>
Sampling Methodology	<p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1, Appendix B). For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. Once sampling was completed, new HydraSleeves™ were deployed in preparation for the next sampling round, with the exception of wells where tree roots could prohibit the retrieval of the HydraSleeves™ in future rounds, as detailed in Table 17. HydraSleeves™ were not installed in monitoring wells which are also sampled as part of the routine Water Quality Monitoring Program.</p>
Quality Assurance/Quality Control (QA/QC) Samples	<p>Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one sample per day of sampling when non-dedicated equipment is used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment.</p> <p>Refer to Appendix C for assessment of QA/QC sample data.</p>
Sample Analysis	<p>All primary samples were submitted for PFAS suite analysis using the standard levels of detection.</p> <p>ALS Environmental Pty Ltd (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.
Quality Assurance/Quality Control (QA/QC) Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one sample per day of sampling when non-dedicated equipment is used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. ALS Brisbane, Queensland was used as the primary laboratory. NMI Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by NATA. Chain of Custody Forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T5, Appendix B .
Quality Assurance/Quality	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary

Item	Details
Control (QA/QC) Samples	samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one sample per day of sampling when non-dedicated equipment is used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. ALS Brisbane, Queensland was used as the primary laboratory. NMI Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by NATA. Chain of Custody Forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP (HEPA 2020).
- Department of Health (DoH), 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM).

In accordance with the OMP (Department of Defence, 2020) and SAQP (AECOM, 2021), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** below.

Table 7 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria. as well as one surface water location which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	

Pathway	Compound	Criteria	Comment / Reference
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020).
	PFOA	220 µg/L	<i>All surface water and groundwater results will be compared to these criteria.</i>

There are no human health or ecological guideline values available for sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2021).

Data validation assessment is provided in **Appendix C**.

The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with DCMM (Defence, 2018 as amended 2019) Annex L requirements (Department of Defence, 2019).

3.6 Deviations from the SAQP

Table 8 lists the deviations from the SAQP (AECOM, 2021) during this sampling round.

Table 8 Deviation from the SAQP during Dry Season 2021 Sampling Event

SAQP	Dry Season Sampling 2021
Collection of surface water at 31 co-located surface water and sediment locations	Eleven surface water sampling locations were dry (SW109, SW110, SW113, SW120, SW126, SW128, SW129, SW130, SW132, SW133 and SW136) and surface water samples could not be collected from these locations.
Collection of surface water and sediment samples at SW132/SD132	SW132/SD132 was dry and consisted of large cobbles. No sediment or surface water was present during the sampling event and no samples were collected from this location.
Collection of surface water and sediment samples at SW137/SD137 as presented in Figure 3 of the SAQP (AECOM, 2021).	<p>During the previous sampling event it was identified that SW137/SD137 was in the incorrect location compared to the PMAP (Department of Defence, 2020).</p> <p>The update of the SAQP was in progress at the time of the sampling event. Following discussion with Defence, SW137/SD137, as previously displayed on Figure 3 (AECOM, 2021), was removed from the plan and replaced with SW144/SD144 which was sampled this round. SW144/SD144 is located in the top dam and is the intended sampling location in the PMAP (Department of Defence, 2020).</p> <p>These changes are reflected in revision 4 of the SAQP.</p>

4.0 Field Observations and Results

The 2021 dry season sampling event was completed between 16 and 20 August 2021, commencing with groundwater gauging and deployment of HydraSleeves™. The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 9**.

Table 9 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	Weather was warm and sunny during the sampling event.
Estate Management Works or Training Activities	Construction associated with the Land 400 project was underway during the sampling event, at former Building G2731, on the corner of Lachlan Wilson Drive and Gallipoli Drive. This did not impact access to sample locations, however, earthworks in this area have the potential to impact PFAS concentrations in surface water and sediment samples down gradient of the project, near the Base boundary. No other estate management works, or training exercises impacted access to sample groundwater, surface water and sediment locations.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 10 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	<p>The headworks at the following monitoring wells were noted to be damaged during the 2021 dry season sampling event:</p> <ul style="list-style-type: none"> MW115 was bent at approximately 0.75 metres below top of casing (mBTOC). The well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. MW003 was bent at ground level. The well was able to be sampled in this sampling event using a HydraSleeve™ without a collar. Subsequent works were undertaken on 4 September 2021 to repair the casing and the well was resurveyed on 16 September 2021. Concrete around the monument of MW125S was cracked. Well casing was unaffected, and the well was able to be sampled in this sampling event. The ground had washed away at MW121 and the monument was loose. The well casing was unaffected, and the well was able to be sampled in this sampling event. Well cap was replaced on MW226. Bolts of the gatic cover at MW232 were rusted. New bolts were installed. Tree roots were cleared from MW101 and MW235S prior to installing HydraSleeves™ at the beginning of the round. The ground had washed away at MW233 and the monument was loose. The well casing was unaffected, and the well was able to be sampled in this sampling event. Data loggers were present in MW205S, MW232, MW235S, MW236S. <ul style="list-style-type: none"> Data loggers were removed to deploy HydraSleeves™ and replaced in the well immediately, on top of the HydraSleeve™. The data loggers were removed a second time during retrieval of the HydraSleeves™ and immediately replaced. <p>These damaged headworks are unlikely to impact the data collected or the interpretation of data.</p>

Item	Observations
Field Observations	<p>Groundwater from seven monitoring well locations (MW018, MW101, MW102, MW115, MW135, MW205S and MW212) had a sulphurous odour.</p> <p>Groundwater colour ranged from clear to black/grey (MW122 and MW123S).</p> <p>No other visible or olfactory indications of contamination were observed during the sampling of the monitoring wells.</p> <p>Field observations are presented Table T1 in Appendix B.</p>
Depth to Groundwater	<p>Depth to groundwater ranged between 0.6 and 5.905 metres below top of casing (mBTC). Groundwater elevations were between 0.495 and 24.743 metres Australian Height Datum (mAHD). Groundwater gauging data are presented in Table T1 in Appendix B.</p>
Groundwater Flow Direction	<p>Groundwater contours and inferred groundwater flow directions in August 2021 are shown on Figure 4 in Appendix A. The inferred local groundwater flow direction is to the north across the western portion of the Site and north east in the eastern portion of the Site.</p>
Water Quality Parameters	<p>Groundwater water quality parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below:</p> <ul style="list-style-type: none"> • DO results ranged between 0.42 mg/L (MW115) to 5.3 mg/L (MW205S) indicating poorly to well oxygenated conditions. • EC ranged from 481.2 µS/cm (MW123I) to 37,926 µS/cm (MW232) fresh to saline conditions. • pH ranged from 6.19 (MW217) to 7.99 (MW065). pH results generally indicated slightly acidic to slightly alkaline conditions. • ORP ranged from -167.5 mV (MW101) to 229.6 mV (MW205S) indicating moderately to strongly reducing conditions. • Temperature ranged from 22.3°C (MW226) to 28.7°C (MW072).

4.1.2 Groundwater Analytical Results

Of the 40 groundwater wells sampled during this event, 34 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**. Five off-Base samples exceeded the adopted drinking water guideline for PFOS+PFHxS and 20 samples, both on and off-Base, exceeded the adopted ecological guidelines for PFOS (**Table T2, Appendix B**). No exceedances of the drinking water guideline for PFOA in off-Base groundwater wells were observed and no exceedances of the ecological guideline for PFOA were observed in either on-Base or off-Base wells.

Historical groundwater results are presented in **Table T7, Appendix B**. First-time detections of PFAS compounds during this sampling event are detailed in **Table 11** below and shown on **Figure 5A** in **Appendix A**. No first-time exceedances of guideline concentrations in groundwater were detected in this sampling event.

Groundwater sampling results were within the same order of magnitude as historically reported concentrations. Results were generally within the historical range of concentrations with the exception of MW125S.

Table 11 First-time Detections of PFAS in Groundwater

Type	Groundwater Locations	PFOA concentration (µg/L)		PFOS+PFHxS concentration (µg/L)	
		August 2021	Historical maximum	August 2021	Historical maximum
First-time detections of PFOA or PFOS+PFHxS in groundwater on-Base	MW125S	0.01	<0.01	0.96	0.3
First-time detections of PFOA or PFOS+PFHxS in groundwater off-Base	There were no first-time detections in off-Base groundwater samples.				

Concentrations have been rounded to two decimal places.

¹ Blue cells denote first time detection above LOR.

4.2 Surface Water

4.2.1 Observations and Field Measurements

Table 12 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event. SW109, SW110, SW113, SW120, SW126, SW128, SW129, SW130, SW132, SW133 and SW136 were dry at the time of sampling, no surface water was collected from these locations.
Field Observations	Surface water from two locations (SW139 and SW212) had a sulfurous odour. Surface water from three locations (SW119, SW134 and SW135) had a slight organic odour. Surface water from five locations (SW134, SW135, SW203, SW211 and SW217) had slight biological sheen on the surface. No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations. Field observations are presented Table T3 in Appendix B .
Water Quality Parameters	Surface water quality parameters were measured at the time of sampling. The readings are presented in Table T3 in Appendix B and are summarised below: <ul style="list-style-type: none"> DO results ranged between 0.31 mg/L (SW121) and 12.31 mg/L (SW119) indicating moderately to well oxygenated conditions. EC ranged from 251.8 µS/cm (SW144) to 48,932 µS/cm (SW243) fresh to saline conditions. pH ranged from 6.42 (SW232) to 9.15 (SW119). pH results generally indicated near neutral to alkaline conditions. ORP ranged from -52 mV (SW203) to 222.1 mV (SW243) indicating moderately to strongly reducing conditions. Temperature ranged from 21.3°C (SW203) to 25.4°C (SW212).

4.2.2 PFAS Surface Water Analytical Results

Of the 20 surface water samples, 12 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**. PFOS concentrations in eight samples exceeded the adopted ecological guidelines and PFOS+PFHxS concentrations in three samples exceeded the adopted recreational use

guidelines (**Table T4, Appendix B**). There were no exceedances of adopted guidelines for PFOA in surface water.

Historical surface water results presented in **Table T8, Appendix B**. First-time detections of PFAS compounds are detailed in **Table 13** below and presented on **Figure 5B** in **Appendix A**.

Surface water sampling results were generally within the historical range of concentrations with the exception of SW212.

Table 13 First-time Detections of PFAS in Surface Water

Type	Surface Water Locations	PFOA concentration (µg/L)		PFOS+PFHxS concentration (µg/L)	
		August 2021	Historical maximum	August 2021	Historical maximum
First-time detections of PFOA or PFOS+PFHxS in surface water on-Base	There were no first-time detections in on-Base surface water.				
First-time detections of PFOA or PFOS+PFHxS in surface water off-Base	SW212	0.02	<0.01	0.11	0.28

Concentrations have been rounded to two decimal places.

¹ Blue cells denote first time detection above LOR.

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 14 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible. SD132 consisted of large cobbles and no sediment was present. No sediment sample was collected at this location.
Field Observations	Sediment at two locations (SD139 and SD212) had a sulfurous odour. No other visible or olfactory indications of contamination were observed during the sampling of sediment locations. Sediment logging and observation data are presented in Table T5, Appendix B .

4.3.2 PFAS Sediment Analytical Results

Of the 30 sediment samples, 26 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T6** in **Appendix B**.

Historical sediment results presented in **Table T9, Appendix B**. First-time detections of PFOA and PFOS+PFHxS in sediment are presented in **Table 15** below and on **Figure 5C** in **Appendix A**.

Sediment sampling results were generally within the historical range of concentrations with the exception of SD205 and SD220.

There are no endorsed human health or ecological guideline values available for sediment.

Table 15 First-time Detections of PFAS in Sediment

Sediment Locations	PFOA concentration (mg/kg)	PFOS+PFHxS concentration (mg/kg)
SD205	0.0002	0.0019
SD220	0.0003	0.0410

Concentrations have been rounded to four decimal places.

*Blue cells denote first time detection above LOR.

5.0 Well Network Repairs

Well network repairs were completed during and following the August 2021 sampling event. These repairs are detailed in **Table 16** below.

Table 16 Well Network Repairs

Repair Required	Date Completed	Comments
Monument and casing at MW003 were bent at approximately ground level. The bend in the casing prohibited using HydraSleeves™ with collar for sampling. This required replacement of casing from the bend and resurvey of top of casing level.	Repairs completed 4 September 2021. Well resurveyed 16 September 2021.	The original monument was filled with cement and could not be reused. A new monument was installed. Top of casing survey level has been updated in Defence ESdat.
Well cap at MW226 was missing and required replacement. This was completed during sampling of the well.	19 August 2021	N/A
Bolts of the gatic cover at MW232 were rusted. New bolts were installed.	20 August 2021	N/A

6.0 Summary and Next Sampling Event

6.1 Summary of Monitoring Event

The dry season monitoring event was completed between 16 and 20 August 2021 at the Base and surrounding suburbs and included sampling of groundwater, surface water and sediment. **Table 17** summarises findings of the August 2021 sampling event and the recommended actions.

Table 17 Summary of Sampling Event

Item	Comment	Recommended Actions
Groundwater: Access to sampling locations and monitoring well network condition.	All of the 40 monitoring well locations were accessible and able to be sampled.	Ongoing monitoring in accordance with the OMP.
	The casing of MW003 and MW115 was bent below ground level. A sample was collected using a HydraSleeve™ without a collar.	MW003 has since been repaired and can be monitored as normal. Continue monitoring MW115 using a HydraSleeve™ without a collar.
	The monument of MW121 and MW233 was loose due to a wash out of the ground below the concrete plinth. The concrete plinth at the base of the monument of MW125S is cracked.	Repair concrete plinth on MW121, MW125S and MW233.
	Sediment was present in HydraSleeves™ retrieved from MW065, MW122, MW123S, MW123I and MW217.	Develop these wells to remove sediment prior to HydraSleeve™ deployment in the next round.
	Data loggers were present in the following off-Base wells: <ul style="list-style-type: none"> MW205S MW232 MW235S MW236S. Data loggers were removed to deploy HydraSleeves™ and replaced in the well immediately, on top of the HydraSleeve™. The data loggers were removed a second time during retrieval of the HydraSleeves™ and immediately replaced. A note was left for the owner of the data loggers in each well collar detailing date and time of removal and contact information. HydraSleeves™ were not redeployed in wells with data loggers.	Defence has advised that the owner of the data loggers is unknown. It is recommended that the data loggers be removed and the data downloaded. AECOM to deploy HydraSleeves™ in these wells at the beginning of the subsequent sampling round.
	HydraSleeves™ were not redeployed in the following wells due to conflict with the routine Water Quality Monitoring Program: <ul style="list-style-type: none"> MW002 MW003 MW072 MW074 	AECOM to deploy HydraSleeves™ in these wells at the beginning of the subsequent sampling round.
	HydraSleeves™ were not redeployed in the following wells due to potential for tree roots to prohibit retrieval of the HydraSleeve™: <ul style="list-style-type: none"> MW101 MW131 	AECOM to deploy HydraSleeves™ in these wells at the beginning of the subsequent sampling round.

Item	Comment	Recommended Actions
<p><u>Sediment/Surface Water:</u> Access to sampling locations.</p>	<p>All 31 surface water and sediment locations were accessible.</p> <p>SW109, SW110, SW113, SW120, SW126, SW128, SW129, SW130, SW132, SW133 and SW136 were dry at the time of sampling, no surface water was collected from these locations.</p> <p>SD132 consisted of large cobbles and no sediment or surface water was present. No sample was collected at this location.</p>	<p>Continue monitoring in accordance with the OMP.</p> <p>SW132/SD132 should be revisited at the next sampling event to assess for presence of sediment.</p>
<p><u>Analytical Results</u></p>	<p>PFAS compounds were detected at concentrations exceeding the laboratory LOR in 34 groundwater samples, 12 surface water samples and 26 sediment samples.</p>	<p>Continue monitoring in accordance with the OMP.</p>
<p><u>First-time detections of PFOA or PFOS+PFHxS</u></p>	<p><u>Groundwater:</u> PFOA was detected for the first time at on-Base groundwater monitoring well MW125S during this sampling round.</p> <p><u>Surface Water:</u> Results showed a first-time detection of PFOA at one off-Base sampling locations (SW212) during this sampling round.</p> <p><u>Sediment:</u> PFOA was detected for the first time at two off-Base (SD205 and SD220) sediment sampling locations during this sampling round.</p>	<p>Continue monitoring in accordance with the OMP.</p>
<p><u>First-time exceedances of screening criteria for PFOS, PFOA or PFOS+PFHxS</u></p>	<p>There were no first-time exceedances of guidelines detected in groundwater, surface water or sediment.</p>	<p>Continue monitoring in accordance with the OMP.</p>

6.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for February/March 2022.

6.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled for January 2022.

mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Eh - Redox Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre

µS/cm - microsiemens per centimeter
 °C - degrees Celcius
 "-" denotes no analysis taken
 mV - millivolt

* Depth at which collar of the HydraSleeve was installed. Length of HydraSleeve = 1.3 m

Location ID	Date	Sample Description	Odour	Comment
Eastern PFAS Contamination Area				
SD119	18/08/2021	Silty CLAY. Low plasticity, very soft, grey, saturated.	No odour	High organic content (roots and algae).
SD121	16/08/2021	Silty GRAVEL. Medium to coarse, sub-angular gravel, loose, dark grey, saturated.	No odour	High organic content (roots and leaves).
Former Fire Station				
SD109	16/08/2021	Sandy, silty, CLAY. Low plasticity, fine grain sand, brown, moist, with medium to coarse gravels.	No odour	High organic content (roots and leaves).
SD110	16/08/2021	Sandy CLAY. Low plasticity, medium grain sub-angular sand, brown, moist, with medium gravels.	No odour	High organic content (roots and leaves).
Lavarack Golf Course & Sporting Field				
SD129	18/08/2021	Silty GRAVEL. Fine gravel, brown and orange, dry, with some sand.	No odour	High organic content (leaves).
SD130	18/08/2021	SAND. Medium to coarse, sub-rounded to sub-angular, brown, orange and pink, dry, with medium gravels.	No odour	High organic content (leaves).
Top, Middle and Lower Dams				
SD139	16/08/2021	Silty SAND. Medium grain sub-angular, black, saturated.	Sulfurous	High organic content (roots and decaying sticks).
SD140	16/08/2021	Silty SAND. Medium grain sub-angular, saturated, with medium gravels.	No odour	High organic content (roots and decaying sticks).
SD144	16/08/2021	Sandy SILT. Low plasticity, grey brown, saturated, with fine gravels.	No odour	High organic content (roots and leaves).
Remaining On-Base				
SD113	18/08/2021	SAND. Medium to coarse grain, sub-angular, very loose, light brown and orange, dry, with some silt.	No odour	High organic content (sticks and leaves).
SD120	18/08/2021	GRAVEL. Medium to coarse grain, sub-rounded to sub-angular, loose, brown, orange and black, dry, with cobbles and traces of silt.	No odour	High organic content (roots and leaves).
Base Boundary				
SD126	18/08/2021	Silty gravelly SAND. Fine to medium grain, sub-angular, loose, dry.	No odour	High organic content (leaves).
SD128	18/08/2021	Silty gravelly SAND. Fine to medium grain, sub-angular, loose, dry.	No odour	High organic content (leaves).
SD132		Location not sampled. Area was rocky with no sediment or water.		
SD133	16/08/2021	Sandy CLAY. Low plasticity, firm, fine sands, medium to coarse gravels, grey/brown.	No odour	High organic content (grass).
SD134	18/08/2021	Silty CLAY. Low plasticity, grey, soft, saturated.	No odour	Roots and leaves present. Mosquito larvae evident.
SD135	18/08/2021	SAND. Medium to coarse grain, sub-angular, orange, brown and pink, saturated.	No odour	Minor organic content (roots and leaves).
SD136	16/08/2021	Sandy SILT. Low plasticity, firm, grey, dry, with medium sub-angular gravels.	No odour	High organic content (roots and leaves).
Off-Base				
SD203	19/08/2021	Silty SAND. Fine to medium grain, firm, brown, saturated.	No odour	
SD205	19/08/2021	Sandy SILT. Medium plasticity.	No odour	Minor organic content (roots and leaves).
SD211	19/08/2021	Silty SAND. Black, saturated.	No odour	High organic content (roots and leaves). Grass growing in drain.
SD212	19/08/2021	Silty SAND. Sub-angular, mottled brown and black, saturated.	Sulfurous	High organic content (roots and leaves).
SD217	19/08/2021	Silty SAND. Sub-angular, red brown, saturated.	No odour	High organic content (roots and leaves).
SD220	18/08/2021	Silty SAND. Saturdated.	No odour	High organic content (roots and leaves).
SD227	18/08/2021	Silty SAND. Medium to coarse grain, loose, dark grey.	No odour	High organic content (roots and leaves).
SD232	18/08/2021	Silty SAND. Sub-angular, dense, with traces of gravels.	No odour	
SD233	18/08/2021	Silty SAND. Loose, dry.	No odour	High organic content (roots and leaves).
SD242	16/08/2021	Sandy SILT. Low plasticity, very soft, grey, saturated.	No odour	High organic content (roots and leaves).
SD243	16/08/2021	Sandy SILT. Medium plasticity, fine grain, dark grey, saturated.	No odour	High organic content (roots and leaves). 2mm layer of light brown silt on surface
SD244	18/08/2021	Silty, sandy GRAVEL. Fine gravel, medium density, brown, saturated.	No odour	High organic content (roots and leaves).
SD245	18/08/2021	Silty CLAY. Low plasticity, soft, saturated.	No odour	High organic content (roots and leaves).

Table with 30 columns representing different PFAS compounds (e.g., 4:2 FTS, 6:2 FTS, 8:2 FTS, etc.) and 2 rows for units (mg/kg) and LOR values.

Main data table with columns for Location ID, Sample Date, and 30 PFAS compound concentrations. Rows are grouped by location: Eastern PFAS Contamination Area, Former Fire Station, Lavarack Golf Course and Sporting Fields, Top, Middle and Lower Dams, Remaining On-Base, Base Boundary, and Off-Base.

Appendix C

Analytical Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by: [REDACTED]	Date: 20/09/2021
Client:	Department of Defence		
Site:	Lavarack Barracks Townsville (0229)		
Matrix type:	Groundwater, surface water, sediment	Data verified by: [REDACTED]	Date: 21/08/2021
No. of primary samples:	40 groundwater, 20 surface water, 30 sediment		
Laboratory:	ALS (Brisbane), NMI (Sydney)	Project Manager: [REDACTED]	
Lab reference:	ET2103890, ET2103889, ET2103890, RN1328463		

Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.
	The data are considered appropriate for use to meet the project objectives.

Field QA/QC

Sampling personnel	Sampling was conducted by AECOM personnel from 16 to 20 August 2021.
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection.
Chain of Custody (COC)	COC documents completed as per AECOM procedures.
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (11 in total). All concentrations in the rinsate samples were reported below the LOR for all analytes tested (see Table C4).
Trip Blanks	Trip blank samples were submitted to the laboratory at a rate of one per batch of samples delivered to the laboratory (one in total). Concentrations were reported below the LOR for all analytes tested in the trip blank (Table C4). Trip blanks were not submitted for batches where samples on private properties were collected.
Eskies to Laboratory	A total of four eskies of samples in one delivery were submitted to ALS across the sampling event.
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples (four duplicates and triplicates for groundwater, two duplicates and triplicates for surface water and three duplicates and triplicates for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for all matrices.
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 1.4°C and 3.8°C. All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F .

Laboratory QA/QC

Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none">• Laboratory duplicates for PFAS in water (8.86%) were below the expected rate of 10% in ET2103890.• Matrix spikes for PFAS in water (2.53%) were below the expected rate of 5% in ET2103890.
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits.
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none">• Perfluorohexane sulfonic acid (PFHxS), perfluorooctane sulfonic acid (PFOS) was not determined in soil in batch ET2103890 due to background level being greater than or equal to four times the spike level.• Perfluorohexane sulfonic acid (PFHxS) was not determined in water in batch ET2103890 due to background level being greater than or equal to four times the spike level.• Perfluoropentanoic acid (PFPeA) was not determined in water in batch ET2103889 or ET2103923 due to background level being greater than or equal to four times the spike level.
Surrogate spike recovery	No surrogate recovery outliers were reported.

QA/QC Data Evaluation

Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	<p>Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.</p> <p>LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples:</p> <ul style="list-style-type: none">• 0229_MW018_210817, 0229_MW065_210818, 0229_MW128_210818, 0229_MW105_210818, 0229_MW217_210818, 0229_MW235S_210818, 0229_MW236S_210819, 0229_MW074_210819, 0229_MW232_210820, 0229_MW072_210820, 0229_SD139_210816 in ET2103890.

Field duplicate RPDs

RPDs for groundwater, surface water, and sediment are reported in **Tables C1, C2, and C3** respectively. Field duplicate RPDs were reported within control limits exception of the following (the sample with the higher concentration is in bold):

- PFOS in **0229_MW018_210818** and 0229_QC104_210818.
- PFOS in 0229_SD140_210816 and **0229_QC101_210816**.

Duplicate concentrations were within the same order of magnitude compared to the concentrations in the primary sample and this is not considered to impact interpretation of results.

Field triplicate RPDs

Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):

- PFBS, PFHxA, PFPeS, PFOS, PFOA and PFHxS in **0229_MW018_210818** and 0229_QC104_210818.
- PFHpS and PFPeS in **0229_MW105_210818** and 0229_QC205_210818.
- PFPeS, PFOS and PFOA in **0229_MW131_210819** and 0229_QC208_210819.
- PFHxS in **0229_SW140_210816** and 0229_QC200_210816.
- PFOS in **0229_SD140_210816** and 0229_QC201_210816.
- PFOS in **0229_SD120_210818** and 0229_QC207_210818

Where RPDs exceeded control limits the higher concentration was reported in the primary sample, therefore this would not lead to under reporting detections in primary samples. Triplicate concentrations, with the exception of 0229_QC200_210816, were within the same order of magnitude compared to the concentrations in the primary sample. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 100 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PTAS DAM LAKEBARK		Project Number:	60612487-3.1	
Project Location:	LAKEBARK DAM		Client:	DEF OF DEFENCE	
PM Name:	[Redacted]		Fieldwork Staff Name:	[Redacted]	
This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.					
INSTRUMENT DETAILS					
Supplier:	HYMET				
Make and Model:	YSI				
Serial Number:	19D105097				
CALIBRATION					
CALIBRATE WITH CALIBRATION SOLUTIONS					
Date and Time:	18/8/21				
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH	pH	µS/cm	ppm	ppm
Calibration Standard Concentration:	7	4	2848	100%	251
Calibration Reading:	7.02	4.03	2848	99.77	250.7
Calibration Temperature:	19.7	17.8	19.5	20.1	15.2
ONGOING CHECKS

Laboratory Reports

CERTIFICATE OF ANALYSIS

Work Order : ET2103890
Client : AECOM Australia Pty Ltd
Contact : [Redacted]
Address : BRISBANE
Telephone : ----
Project : QLD_0229_PFASOMP_20
Order number : 60612487_3.1
C-O-C number : 26431
Sampler : [Redacted]
Site : QLD_0229
Quote number : TV/007/21 - Compass
No. of samples received : 106
No. of samples analysed : 106

Page : 1 of 47
Laboratory : Environmental Division Townsville
Contact : [Redacted]
Address : 13 Carlton Street, Kirwan Townsville QLD Australia 4815
Telephone : +61 7 3552 8616
Date Samples Received : 24-Aug-2021 08:25
Date Analysis Commenced : 26-Aug-2021
Issue Date : 02-Sep-2021 10:05

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes roles like Senior Acid Sulfate Soil Chemist and Senior Organic Chemist.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample '0229_SD139_210816' was diluted due to matrix interference. LOR adjusted accordingly.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. Surrogate recovery was not determined on sample '0229_MW128_210818'.
- EP231X PFAS: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2103890	Page	: 1 of 18
Client	: AECOM Australia Pty Ltd	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: +61 7 3552 8616
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 24-Aug-2021
Site	: QLD_0229	Issue Date	: 02-Sep-2021
Sampler	: [REDACTED]	No. of samples received	: 106
Order number	: 60612487_3.1	No. of samples analysed	: 106

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2103890--004	0229_SD110_210816	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2103890--004	0229_SD110_210816	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2103890--030	0229_MW125S_210817	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	7	79	8.86	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	79	2.53	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
Container / Client Sample ID(s)

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	4	35	11.43	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	38	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	38	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order	: ET2103890	Page	: 1 of 27

No. of samples analysed	: 106		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
[REDACTED]	Senior Acid Sulfate Soil Chemist	Brisbane Inorganics, Stafford, QLD

[REDACTED]	Senior Organic Chemist - PFAS	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Dates

Date Samples Received	: 24-Aug-2021 08:25	Issue Date	: 26-Aug-2021
Client Requested Due Date	: 01-Sep-2021	Scheduled Reporting Date	: 01-Sep-2021

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 4	Temperature	: 1.4><->3.8°C - Ice present
Receipt Detail	: HARD ESKIES	No. of samples received / analysed	: 106 / 106

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***Samples were originally received by ALS Townsville on 20/8/21, and forwarded to ALS Brisbane for analysis.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- **Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Date Analysis Commenced : 26-Aug-2021
Issue Date : 27-Aug-2021 17:21

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Senior Organic Chemist - PFAS

Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: WATER

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231B: Perfluoroalkyl Carboxylic Acids	EB2123968--007	Anonymous	Perfluoropentanoic acid (PFPeA)	2706-90-3	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: WATER

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	12	16.67	10.00	✔	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ET2103889 Client : AECOM Australia Pty Ltd Contact : [REDACTED] Address : BRISBANE Telephone : ---- Project : QLD_0229_PFASOMP_20 Order number : 60612487_3.1 C-O-C number : 26578 Sampler : [REDACTED] Site : QLD_0229 Quote number : TV/007/21 - Compass No. of samples received : 1 No. of samples analysed : 1	Page : 1 of 7 Laboratory : Environmental Division Townsville Contact : [REDACTED] Address : 13 Carlton Street, Kirwan Townsville QLD Australia 4815 Telephone : [REDACTED] Date Samples Received : 24-Aug-2021 Date Analysis Commenced : 26-Aug-2021 Issue Date : 27-Aug-2021

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Organic Chemist - PFAS	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Page : 1 of 3
Quote number : ET2021AECOMAU0001 (TV/007/21 -
Compass)

C-O-C number : 26578

QC Level : NEPM 2013 B3 & ALS QC Standard

Site : QLD 0229

Sampler : [REDACTED]

Dates

Date Samples Received : 24-Aug-2021 08:25
Client Requested Due : 30-Aug-2021
Date

Issue Date : 25-Aug-2021
Scheduled Reporting Date : 30-Aug-2021

Delivery Details

Mode of Delivery : Carrier
No. of coolers/boxes : 4
Receipt Detail : HARD ESKIES

Security Seal : Intact.
Temperature : 1.4<->3.8°C - Ice present
No. of samples received / analysed : 1 / 1

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***Samples were originally received by ALS Townsville on 20/8/21, and forwarded to ALS Brisbane for analysis.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], Senior Inorganic Chemist, Brisbane Inorganics, Stafford, QLD. Row 2: [Redacted], Assistant Laboratory Manager, Brisbane Organics, Stafford, QLD.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231B: Perfluoroalkyl Carboxylic Acids	EB2123968--007	Anonymous	Perfluoropentanoic acid (PFPeA)	2706-90-3	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Receipt Detail	: HARD ESKIES	No. of samples received / analysed	: 4 / 4

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***Samples were originally received by ALS Townsville on 20/8/21, and forwarded to ALS Brisbane for analysis.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- **Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 9
Report No. RN1328463

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW
Accreditation No. 198

16-SEP-2021

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020) at Lavarack Barracks Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**, PFAS Source Areas are identified and defined in the PMAP (Department of Defence, 2020). The OMP (Department of Defence, 2020) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, March/April 2021, August 2021, February to April 2022, August 2022 and February/March 2023.

These sampling events include:

- Groundwater sampling of 31 on-Base wells at Lavarack Barracks and nine off-Base wells in the suburbs of Annandale, Idalia and Wulguru.
- Sediment sampling at 18 on-Base locations at Lavarack Barracks and 13 off-Base locations in the Ross River and waterways in Annandale and Idalia with co-located surface water sampling when water is present.

A sampling and analysis quality plan (SAQP Rev 5, AECOM, 2022) was prepared to provide details of the sampling event.

This sampling event factual report has been prepared to report the results of the 2022 Wet Season Sampling Event, which was completed over three months - February, March and April 2022. This report specifically highlights first-time detections and/or new exceedances of human health or ecological guideline values.

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objective of the OMP is to "*set out a program of ongoing sampling to assess changes in the nature and extent of PFAS concentration within the environment, where Defence's historical use of legacy [Aqueous Film Forming Foam] AFFF has led to an identified potential risk to a receptor, or potential future risk to a receptor*" (Department of Defence, 2020).

The objectives of the SAQP (AECOM, 2022) are to:

- Implement the OMP prepared as part of the PMAP (Department of Defence, 2020); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2022 wet season sampling event scope of works in accordance with the SAQP (AECOM, 2022).

2.0 Scope of Work

The sampling event at the Base was completed in general accordance with the SAQP (AECOM, 2022). In summary, the scope of works for this sampling event included:

- Review of the SAQP prior to the monitoring event to ensure compliance with relevant Australia guidance.
- *February 2022* – Collection of groundwater samples at three wells (MW117D, MW118 and MW119) located in construction areas. Due to the construction work, these wells were sampled two weeks early to ensure groundwater samples were collected from these wells. Deviations from the SAQP are discussed in **Section 3.7**.
- *March 2022* - Collection of sediment and co-located surface water samples (where water was present) at 31 locations including 18 on-Base and 13 off-Base locations (refer to **Figure 2** and **3, Appendix A**). Collection of groundwater samples at 36 locations. One monitoring well, MW117S, was not sampled as it has been destroyed during construction works, refer to **Section 3.7**.
- *April 2022* - Collection of three sediment and eight co-located surface water samples (where water was present) at on-Base locations (refer to **Figure 2** and **3, Appendix A**). Due to anomalous PFAS detections in the groundwater sample from MW217, a replicate groundwater sample was collected, refer to **Section 3.7**.
- Collection of groundwater gauging data and water quality parameter data for surface water and groundwater sample locations (where water was present).
- Analysis of all samples for the PFAS suite (28 analytes) at the standard limit of reporting (LOR).
- Collection of field duplicate and triplicate samples at a rate of 1 in 10 primary samples, one rinsate sample per fieldwork day, and one trip blank per batch analysed for PFAS suite (28 analytes).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Source Area	Monitoring Well ID
Eastern PFAS Contamination Area	MW018, MW114, MW115, MW116, MW139
Former B Squadron	MW135
Former Fire Station	MW105, MW128
Former Fire Training Area	MW131
Former Helicopter Squadron	MW102
Lavarack Golf Course and Sporting Fields	MW065, MW120, MW121, MW122, MW123I, MW123S
Monocell	MW072, MW074, MW106
Stockpile Designated Area 2	MW141
Suspected Aqueous Film Forming Foam (AFFF) Disposal Area	MW101
Top, Middle and Lower Dams	MW138
Base Boundary – On-Base	MW002, MW003, MW117D ¹ , MW117S ¹ , MW118 ¹ , MW119 ¹ , MW124, MW125I, MW125S
Off-Base	MW205S, MW212, MW217 ² , MW220S, MW226, MW232, MW233, MW235S, MW236S

¹ Monitoring wells are currently in a construction area and were accessed for sample collection two weeks before the main sampling event. Samples were collected from MW117D, MW118 and MW119 only. Monitoring wells MW117S and MW117D were damaged or destroyed by construction works however a sample was able to be recovered from MW117D prior to destruction. As the sample was collected after the well had been damaged, and the sample was not collected in accordance with the SAQP requirements, MW117D results should be assessed with caution. No sample was able to be recovered from MW117S

² Supplementary sample collected in April 2022 to confirm results.

Table 2 Surface Water Sampling Locations

Source Area	Surface Water Location ID
Eastern PFAS Contamination Area	SW119, SW121
Former Fire Station	SW109, SW110 ²
Lavarack Golf Course and Sporting Fields	SW129 ¹ , SW130 ¹
Top Middle and Lower Dams ¹	SW139, SW140, SW144
Remaining on-Base	SW113, SW120 ²
Base Boundary	SW126 ¹ , SW128 ¹ , SW132, SW133 ¹ , SW134 ¹ , SW135, SW136
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245

¹ Locations were dry in March 2022, sample was collected in April 2022.

² Sample was collected in March 2022 and confirmed in April 2022 with supplementary sampling.

Table 3 Sediment Sampling Locations

Source Area	Sediment Location ID
Eastern PFAS Contamination Area	SD119, SD121 ¹
Former Fire Station	SD109, SD110
Lavarack Golf Course and Sporting Fields	SD129, SD130
Top Middle and Lower Dams ¹	SD139, SD140, SD144
Remaining on-Base	SD113, SD120
Base Boundary	SD126, SD128, SD132 ¹ , SD133, SD134, SD135, SD136
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242 ¹ , SD243, SD244, SD245

¹ Sediment was not present in March 2022, sample was collected in April 2022.

3.0 Methodology

The methodology used for 2022 wet season sampling event was in general accordance with the SAQP (AECOM, 2022) and is summarised in **Sections 3.1-3.3**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	<p>Depth to groundwater was measured at the beginning of the sampling round to facilitate gauging all wells within the shallow aquifer on the same day.</p> <p>The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.</p>
Water Quality Parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T1). Equipment calibration certificates for the water quality meter are provided in Appendix F.</p>
Sampling Methodology	<p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1, Appendix B).</p> <p>For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. Once sampling was completed, new HydraSleeves™ were deployed in preparation for the next sampling round, with the exception of those wells noted in Table T1, Appendix B.</p>

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T5, Appendix B .

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 7**, below.

Table 7 QAQC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.

Item	Details
Sample Analysis	<p>All primary samples were submitted for PFAS suite analysis using the standard levels of detection.</p> <p>Australian Laboratory Services (ALS) Environmental Pty Ltd Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, (HEPA 2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2022), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 8** below.

Table 8 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria. as well as one surface water location (SW245) which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

3.6 Data Quality Objectives and Data Validation

The data quality objectives (DQO) and data quality indicators (DQI) adopted for these works are presented in the SAQP (AECOM, 2022).

In accordance with Step 5 of the DQO process (AECOM, 2022), resampling of a groundwater location (MW217) outside of the main sampling event was completed to verify an anomalous detection of PFAS. This is further discussed in **Table 9, Section 3.7**.

Data validation assessment is provided in **Appendix C**.

Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 9 lists the deviations from the SAQP (AECOM, 2022) during this sampling round.

Table 9 Deviations from the SAQP during 2022 Wet Season Sampling Event

SAQP	2022 Wet Season Sampling Event	Impact of Deviation
Collection of surface water at SW120, SW126, SW128, SW129, SW130, SW133, SW134	No surface water present at time of initial sampling round in March 2022 at SW120, SW126, SW128, SW129, SW130, SW133, SW134. Sampling completed in April 2022, following rainfall when surface water was present.	Minor – data set is considered representative of broader Base conditions.
Collection of sediment at SD121, SD132, SD242	No sediment was present in the March 2022 sampling event and was therefore collected following rainfall in April 2022.	Nil – data set is considered representative of broader Base conditions.
Collection of groundwater samples from MW117S, MW117D, MW118 and MW119 as part of 2022 wet season.	Monitoring wells were accessed for sampling two weeks before the main sampling event as the wells are located in a construction zone, some of which were set to be destroyed during the construction works. MW117S was not sampled as it had already been destroyed. The HydraSleeve™ at MW117D was removed by construction workers prior to destruction and was observed to have a high sediment load.	No data were available from MW117S as the well was destroyed. Interpret results from MW117D with caution as sample collection was not completed in accordance with the SAQP. Assess the state of the two remaining wells upon completion of construction works and determine if MW118 and MW119 are still serviceable and suitable for OMP sampling.
Collection of groundwater sample from MW217.	Laboratory analytical results for the sample collected at MW217 on 3 March 2022 indicated anomalous PFAS detections (including 0.06 µg/L 6:2 FTS, 0.02 µg/L PFHxS and 0.08 µg/L PFOS). Due to the anomaly, the well was resampled in April 2022 to verify the detections. Resampling confirmed that only PFHxS was present at detectable concentrations (0.01 µg/L).	Resampling of the well indicated PFOS concentrations were below the limit reporting and consistent with historical results, therefore results for MW217 collected on 3 March 2022 were not verified, not considered representative of PFAS concentrations and discarded.

4.0 Well Network Maintenance

Maintenance on wells within the Lavarack Barracks PFAS OMP network was completed by AECOM between 4 September 2021 and 1 March 2022. This work involved maintenance of three existing monitoring wells. Refer to **Appendix G** for survey data for MW003.

Table 10 below provides a summary of the work completed.

Table 10 Summary of maintenance works completed by AECOM on the well network.

Well ID	Description of Work
MW003	Cut off well at bend below ground level and install replacement monument. Resurvey well.
MW121	Repaired concrete plinth to stabilise well.
MW226	Replaced well cap.
MW232	Replaced rusted bolts.
MW233	Ground reinstated to stabilise well.

Prior to the works at MW003 a service locator was engaged to ensure avoidance of services for safety and property protection purposes during digging around the headworks of the well.

5.0 Field Observations and Results

The 2022 wet season sampling event was completed between 28 February and 4 March 2022 with supplementary sampling completed between 22 and 26 April 2022. Groundwater gauging and deployment of HydraSleeves™ was conducted at the beginning of the sampling round.

The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 11**.

Table 11 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	<p>The Bureau of Meteorology (BOM) (BOM, 2022) reported the following monthly rainfall data leading up to and during the 2022 wet season sampling event:</p> <ul style="list-style-type: none"> January 2022: 338.2 mm February 2022: 120.2 mm March 2022: 39.6 mm April 2022: 293.4 mm <p>Weather was warm and sunny during the sampling program in February and March 2022. Light rain was experienced during the sampling program in April 2022.</p>
Estate Management Works or Training Activities	<p>Construction associated with the Land 400 project was underway during the sampling event, on the corner of Lachlan Wilson Drive and Gallipoli Drive. This did not impact access to sample locations, however, earthworks in this area have the potential to impact PFAS concentrations in surface water and sediment samples down gradient of the project, near the Base boundary.</p> <p>Monitoring wells MW117S, MW117D, MW118 and MW119 are currently in a construction area and were sampled two weeks before the main sampling event. These monitoring locations have since been recorded as destroyed.</p> <p>No other estate management works, or training exercises impacted access to sample groundwater, surface water and sediment locations.</p>

The results of the sampling event are summarised in **Sections 5.1-5.3**.

5.1 Groundwater

5.1.1 Observations and Field Measurements

Table 12 Groundwater Observations and Field Measurements

Item	Observations
Access	<p>All monitoring wells were accessible, with the exception of monitoring well MW117S, which was destroyed during construction works. Monitoring wells MW117D, MW118 and MW119 were also within a construction compound and were sampled two weeks prior to the main wet season sampling event based on availability of access to these areas.</p>
Monitoring Well Network	<p>The headworks at the following monitoring wells were noted to be damaged during the 2022 Wet Season Sampling Event:</p> <ul style="list-style-type: none"> Monitoring wells MW117S and MW117D have been destroyed by construction works. MW117D was able to be sampled however due to disturbance of the well, the results are potentially not representative of actual conditions and should be viewed with caution. Concrete around the monument of MW125S was cracked. Well casing was unaffected, and the well was able to be sampled in this sampling event.

Item	Observations
	<ul style="list-style-type: none"> Data loggers were present in MW205S, MW232 and MW236S. <ul style="list-style-type: none"> Data loggers were removed to deploy HydraSleeves™ and replaced in the well immediately, on top of the HydraSleeve™. The data loggers were removed a second time during retrieval of the HydraSleeves™ and immediately replaced.
Field Observations	<p>Groundwater from five monitoring well locations (MW101, MW121, MW128, MW212 and MW235S) had a sulphurous odour. A slight organic odour was recorded during the sampling of monitoring well MW124.</p> <p>Groundwater colour was typically recorded as turbid brown/grey, to clear or low turbidity.</p> <p>No visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells.</p> <p>Field observations are presented Table T1 in Appendix B.</p>
Depth to Groundwater	<p>Depth to groundwater ranged between 0.561 (MW232) and 5.373 (MW205S) metres below top of casing (mBTOC). It is noted that multiple groundwater systems are present across the Management Area. Groundwater elevations within the shallow (alluvial) aquifer were between 1.027 (MW205S) and 13.70 metres Australian Height Datum (mAHD). Groundwater elevations within the deeper (rock) aquifer were between 18.848 (MW128) and 25.705 (MW141) mAHD.</p> <p>Groundwater gauging data are presented in Table T1 in Appendix B.</p>
Groundwater Flow Direction	<p>Groundwater contours and inferred groundwater flow directions in April 2022 are shown on Figure 4 in Appendix A. The inferred local groundwater flow direction is to the north across the western portion of the Site and north east in the eastern portion of the Site, consistent with previous monitoring rounds. Monitoring wells which are tidally influenced have been removed from the contours as have wells MW105 and MW128 which were identified to have incorrect survey data.</p>
Water Quality Parameters	<p>Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below, covering all sampling completed:</p> <ul style="list-style-type: none"> DO results ranged between 0.25 mg/L (MW139) to 6.94 mg/L (MW018) indicating poorly to well oxygenated conditions. EC ranged from 79.3 µS/cm (MW018) to 51,132 µS/cm (MW232) indicating fresh to saline conditions. pH ranged from 5.72 (MW217) to 7.6 (MW065). pH results generally indicated slightly acidic to slightly alkaline conditions. ORP ranged from -194.2 mV (MW115) to 222.6 mV (MW236S) indicating moderately to strongly reducing conditions. Temperature ranged from 26.3°C (MW217) to 37.0°C (MW117D). <p>These results are generally consistent with the groundwater quality parameters from the previous three monitoring rounds since dry season 2020.</p>

5.1.2 Groundwater Analytical Results

Of the 38 groundwater wells sampled during this event, 34 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**. Four of the nine samples collected off-Base, exceeded the adopted drinking water guideline for PFOS+PFHxS.

One exceedance of the ecological guideline for PFOS was observed in off-Base well (MW236S). A total of 18 on-Base and boundary samples exceeded the ecological guideline (for PFOS). No on or off Base samples exceeded the PFOA ecological guideline.

Historical groundwater results are presented in **Table T7, Appendix B**. There were no first-time detections of PFOS, PFOA or PFHxS in any samples during this sampling event, with the exception of PFOS in the March 2022 sample collected from MW217 (0.08 µg/L). Supplementary sampling at MW217 did not confirm the detection of PFOS (<0.001 µg/L), with replicate results consistent with the historical range of concentrations. The supplementary sampling results have therefore been adopted as representative of PFOS concentrations at MW217 and no first-time detections of PFOS have been recorded for Wet Season 2022.

There were no new exceedances of the human health or ecological guidelines during the sampling. Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations.

It is noted that concentrations of PFOS, PFHxS, 6:2 FtS and PFHxA at MW117D were higher than historically reported; historically the Sum of PFAS concentrations were not reported greater than 0.1 µg/L, however during the 2022 wet season sampling event the Sum of PFAS was reported as 0.38 µg/L. MW117D was disturbed prior to sampling due to construction activities that led to the destruction of the monitoring well, the sample was recorded as turbid with a grey / brown colour which may suggest that soil from construction activities entered the HydraSleeve™ prior to sample collection. As the construction activities may have impacted sample integrity at MW117D, reported results are not considered to be representative of the groundwater conditions at this location.

5.2 Surface Water

5.2.1 Observations and Field Measurements

Table 13 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event. SW120, SW126, SW128, SW129, SW130, SW133 and SW134 were dry in March 2022 and following rainfall, they were sampled in April 2022 during a supplementary sampling round.
Field Observations	Surface water at SW139 had a slight organic odour. Surface water at two locations (SW121 and SW205) had a slight biological sheen on the surface. High algal load was noted in surface water at SW135. Surface water at sample location SW211 was observed to be slowly flowing. All other surface water sample locations were visually observed to be not flowing. No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations. Field observations are presented Table T3 in Appendix B .
Water Quality Parameters	Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T3 in Appendix B and are summarised below: <ul style="list-style-type: none"> • DO results ranged between 0.92 mg/L (SW211) and 11.71 mg/L (SW232) indicating moderately to well oxygenated conditions. • EC ranged from 39.1 µS/cm (SW110) to 49,925 µS/cm (SW243) fresh to saline conditions. • pH ranged from 6.67 (SW212) to 8.91 (SW227). pH results generally indicated near neutral to alkaline conditions. • ORP ranged from -12.9 mV (SW109) to 192 mV (SW205) indicating moderately to strongly reducing conditions. • Temperature ranged from 25°C (SW119) to 37.3°C (SW232).

5.2.2 PFAS Surface Water Analytical Results

Samples collected from 25 locations reported concentrations of PFAS compounds above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**. PFOS concentrations in 13 samples exceeded the adopted ecological guidelines for PFOS. No samples exceeded the ecological guideline for PFOA. Sum of PFOS+PFHxS concentrations in two on-Base samples (SW109 and SW110) exceeded the adopted recreational use guidelines (**Table T4, Appendix B**).

New historical maximum concentrations were initially identified in the March 2022 sampling round however supplementary sampling at SW109 and SW120 did not confirm new historical maximums, with replicate results consistent with the historical range of concentrations.

Historical surface water results are presented in **Table T8, Appendix B** and were all reported within the historical range of concentrations. There were no confirmed first-time detections of PFOS, PFOA or sum of PFOS+PFHxS and no new exceedances of the human health or ecological guidelines during the sampling event.

5.3 Sediment

5.3.1 Observations and Field Measurements

Table 14 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible. During the March 2022 sampling event, locations SD121, SD132 and SD242 consisted of large cobbles and no sediment was present. The sediment sample at these locations was collected in April 2022 following rainfall.
Field Observations	No visible or olfactory indications of contamination were observed during the sampling of sediment locations. Organic odours were detected at sample locations SD139 and SD205. Sediment logging and observation data are presented in Table T5, Appendix B .

5.3.2 PFAS Sediment Analytical Results

Of the 31 sediment samples collected, 22 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T6** in **Appendix B**.

Historical sediment results presented in **Table T9, Appendix B**. There were no first-time detections of PFOA or PFOS+PFHxS in sediment. Sediment sampling results were generally within the historical range of concentrations.

There are no endorsed human health or ecological guideline values available for sediment.

6.0 Summary and Next Sampling Event

6.1 Summary of Sampling Event

The routine OMP Wet Season Sampling Event was undertaken at the Base between 28 February and 4 March 2022. Some sampling was completed on 18 February 2022, prior to the main sampling event due to access restrictions at selected locations. Supplementary sampling to confirm first-time detections and new exceedances and to collect the remaining samples was completed between 22 and 26 April 2022. This wet season sampling event included sampling from 38 groundwater monitoring locations, 25 surface water monitoring locations and 31 sediment monitoring locations.

Table 15 summarises the findings of both the March 2022 and April 2022 sampling events and the recommended actions.

Table 15 Summary of Sampling Event

Item	Comment	Recommended Actions
Groundwater: Access to sampling locations	Access constraints necessitated that four monitoring locations, MW117S, MW117D, MW118 and MW119, were accessed for sampling two weeks early. MW117S and MW117D were not accessible as they have been destroyed. MW117S was unable to be sampled and the Hydrasleeve™ from MW117D was collected by the construction contractor and provided to AECOM for analysis, however these results are not considered to be representative of groundwater conditions and should be reviewed with caution.	Ongoing monitoring in accordance with the OMP. Review locations in light of ongoing construction activities and replace wells if and where required.
Surface Water/ Sediment: Insufficient or absent media to sample	During the March 2022 sampling event, five surface water monitoring locations, SW120, SW128, SW129, SW130 and SW134, did not contain surface water at the time of sample collection. Three sediment monitoring locations, SD121, SD132 and SD242, also had insufficient sediment present to enable sampling. Supplementary sampling in April 2022 has addressed this data gap.	Ongoing monitoring in accordance with the OMP. Review locations in light of sample suitability if long term matrix availability becomes a constraint.
Analytical Results	PFAS compounds were detected above laboratory LOR in 34 of the 38 groundwater samples, 27 of the 33 surface water samples and 22 of the 31 sediment samples analysed.	Ongoing monitoring in accordance with the OMP.
First-time detections and new exceedances.	There were no first-time detections of Sum of PFOS+PFHxS or PFOA or new exceedances of the NHMRC (2019) recreational use guidelines, drinking water guidelines (off-site samples only) or the 95% species protection ecological guidelines (HEPA, 2020).	Ongoing monitoring in accordance with the OMP.

6.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for August 2022.

6.3 Upcoming Annual Interpretive Report

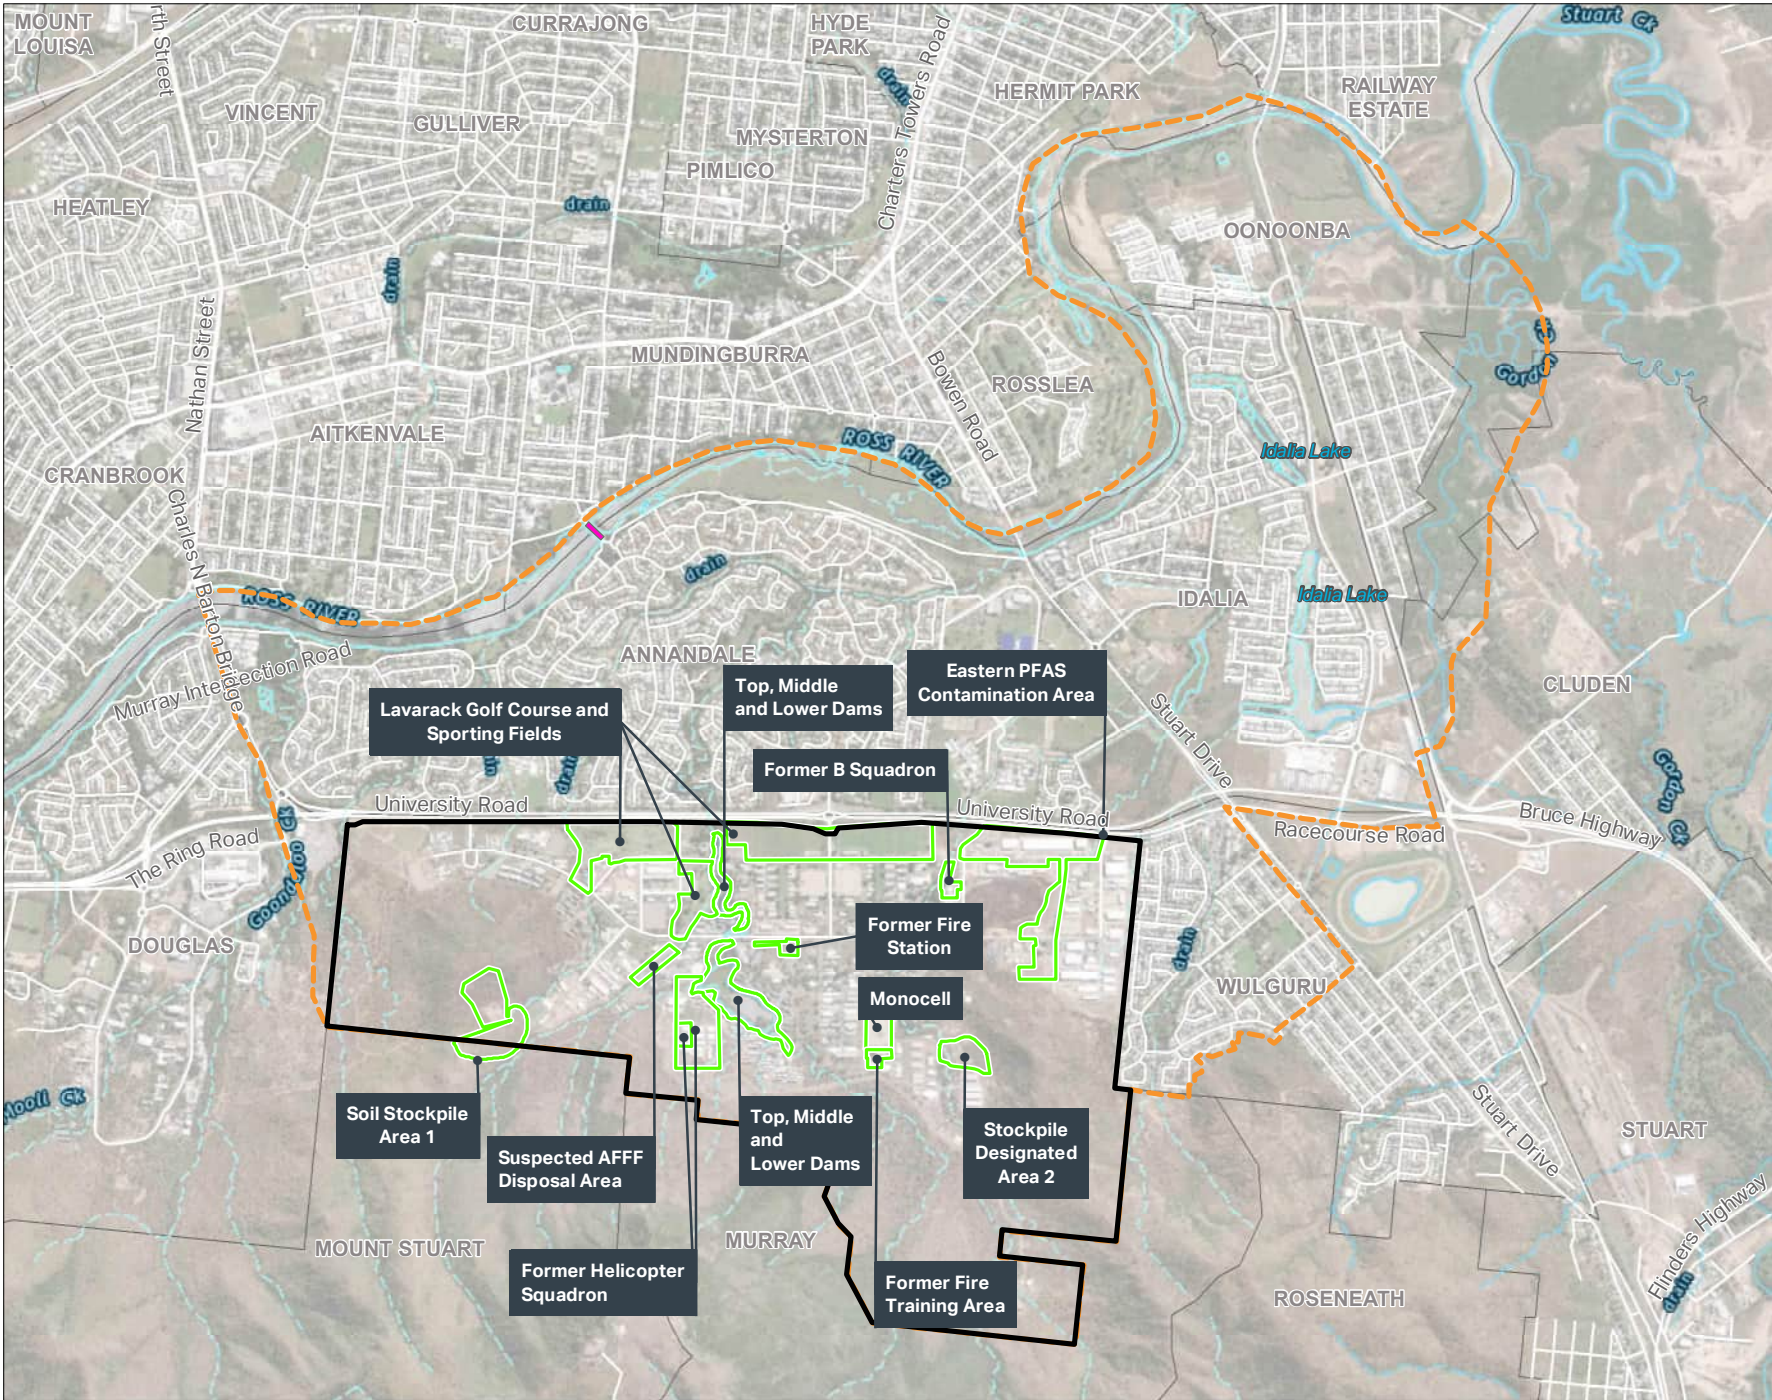

The next annual interpretative report is scheduled for December 2022.

mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Eh - Redox Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre

µS/cm - microsiemens per centimetre
 °C - degrees Celcius
 "-" denotes no analysis recorded
 mV - millivolt
 # denotes disturbance to the well may have impacted sample integrity
 * Depth at which collar of the HydraSleeve was installed. Length of HydraSleeve = 1.3 m

Table T3: Surface Water Quality Parameter Results

Location Code	Sample Date	DO mg/L	EC µS/cm	pH	Redox (mV)	Temp (°C)	Turbidity	Water Colour	Odour	Sheen	Sample Location Morphology	Comments
Eastern PFAS Contamination Area												
SW119	22/04/2022	8.06	594	7.71	49.1	25	Low	Pale yellow	No odour	No sheen	Concrete drain. Not flowing.	Not enough water present for parameter readings on sample day, parameters collected during subsequent round.
SW121	1/03/2022	3.89	2609	7.26	-12.1	31.6	Low	Yellowish Red	No odour	Biosheen Appearance	Concrete drain. Water not flowing.	Sample taken downstream of culvert, upstream on Base had no water.
Former Fire Station												
SW109	1/03/2022	2.47	2618	7.27	-12.9	28.8	Medium	Dark Reddish Brown	No odour	No sheen	Open earthen drain, no flow.	
SW110	1/03/2022	2.85	4157	7.27	-10	30.7	Medium	Pale yellow	No odour	No sheen	Open earthen drain, no flow.	
	26/04/2022	7.28	39.1	6.83	179.8	23.4	Clear	Pale yellow	No odour	No sheen	Earthen drain with concrete culvert, not flowing.	Heavy rain previous night
Lavarack Golf Course & Sporting Field

- Not Recorded

Table T5: Sediment Observation Results

Location ID	Date	Sample Description	Odour	Comment
Eastern PFAS Contamination Area				
SD119	1/03/2022	Silty SAND, brown and black, fine grained, sub-angular, saturated, low organic content.	No odour	
SD121	22/04/2022	Clayey SAND, dark brown to dark grey, fine grained, loose, saturated with some organics (grass roots).	No odour	
Former Fire Station				
SD109	1/03/2022	Silty GRAVEL, cobbles to boulders present, grey and brown, saturated, very poorly graded, low organic content (leaves).	No odour	Low organic content (leaves). Very rocky/gravelly.
SD110	1/03/2022	CLAY and SILT, grey/brown, low plasticity, poorly graded, low organic content.	No odour	High organic content (reeds and leaves).
Lavarack Golf Course & Sporting Field				
SD129	2/03/2022	Gravelly SAND, brown/red, poorly graded, some fine cohesive particles, moist, some organics (grass).	No odour	High organic content (roots).
SD130	2/03/2022	Gravelly SAND, reddish/brown, poorly graded, moist, low organic content.	No odour	Low organic content. Moisture increasing with depth.
Top, Middle and Lower Dams				
SD139	1/03/2022	Sandy SILT, dark brown, low plasticity, well graded, saturated, high organic content.	Organic	High organic content (roots, leaves and decaying sticks). Low proportion of soil matrix.
SD140	1/03/2022	SILT and SAND, high organic content, grey and dark grey, moderately graded, high organic content including roots.	No odour	High organic content (roots and leaves).
SD144	1/03/2022	Silty SAND, dark brown, fine grained, high organic content.	No odour	High organic content (roots and leaves).
Remaining On-Base				
SD113	1/03/2022	SAND, loose, fine to medium grained, sub angular to rounded, well graded, dry, low organic content.	No odour	
SD120	1/03/2022	Gravelly SAND, poorly graded, moist, reddish brown, low organic content.	No odour	
Base Boundary				
SD126	2/03/2022	Gravelly SAND, brown/red, poorly graded, moist, low organic content.	No odour	
SD128	2/03/2022	Sandy GRAVEL, brown/grey, poorly graded, moderate organic content (roots).	No odour	
SD132	22/04/2022	Gravelly SAND, fine to coarse grain with fine to coarse gravels, some cobbles, loose, wet, dark brown, some organics (roots).	No odour	
SD133	1/03/2022	Silty SAND, soft, grey, fine, poorly graded, dry, organic material present.	No odour	
SD134	1/03/2022	Silty CLAY, dark brown, medium plasticity, moist, high organic content.	No odour	High organic content (roots and leaves).
SD135	1/03/2022	Gravelly SAND, soft, light brown and orange, sub angular to sub rounded coarse sand with fine to coarse gravels, saturated.	No odour	High organic content.
SD136	2/03/2022	Silty SAND, reddish/brown, poorly graded, saturated, high organic content.	No odour	High organic content (algal biofilm and leaves).
Off-Base				
SD203	2/03/2022	SAND, medium coarse, saturated, well graded, angular, low organic content.	No odour	
SD205	2/03/2022	Silty CLAY, dark brown, medium plasticity, moist, moderate organic content (roots).	Organic	Moderate organic content (roots and leaves).
SD211	3/03/2022	Sandy GRAVEL, dark grey, fine graded, moderate organic content (woody material)	No odour	
SD212	3/03/2022	SAND, reddish brown, coarse, poorly graded, with some medium gravel, saturated, moderate organic material.	No odour	
SD217	2/03/2022	CLAY, dark brown, medium plasticity, high organic content (biota, roots and leaves).	No odour	
SD220	2/03/2022	CLAY, dark brown/black, medium plasticity, moderate organic content.	No odour	
SD232	2/03/2022	SILT and CLAY, brown and black, medium plasticity, moderate organic content.	No odour	
SD233	2/03/2022	CLAY, dark brown, medium plasticity, wet, high organic content.	No odour	
SD242	22/04/2022	Sandy CLAY, soft, dark brown to dark grey, medium plasticity, saturated, some fine sands with trace organics (grass roots).	No odour	
SD243	2/03/2022	Silty CLAY, dark grey, black, medium plasticity, low organic content.	No odour	

Main data table with columns for Units (mg/kg), various PFAS compounds (e.g., 4:2 FTS, 6:2 FTS, 8:2 FTS, EFOFA, EFOFAA, EFOFE, FOSA, MeFOFA, MFOSAA, MeFOFE, PFBS, PPFBS, PFHxAs, PFHpAs, PFOS, PFDS, PFBA, PFHxA, PFPrPA, PFNA, PFTeDA, PFTDA, PFUnDA, Sum of PFHxAs and PFOS, Sum of PFAS), Location ID, Sample Date, and numerical values.

Appendix C

Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	██████████	Date:	12/05/2022
Client:	Department of Defence				
Site:	Lavarack Barracks Townsville (0229)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	██████████	Date:	12/05/2022
No. of primary samples:	39 groundwater, 24 surface water, 28 sediment (March 2022) 1 groundwater, 8 surface water, 3 sediment (April 2022)				
Laboratory:	ALS (Brisbane), NMI (Sydney)	Project Manager:	██████████		
Lab reference:	ET2201060, ET2201357, ET2201358, ET2201359, ET2202340, RN1345718, RN1350924				
Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.				
Field QA/QC					
Sampling personnel	Sampling was conducted by AECOM personnel from 18 February 2022, 28 February 2022 and 2 to 4 March 2022. Additional sampling was conducted by AECOM personnel on the 22 and 26 April 2022.				
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (nine in total). Concentrations of all analytes tested were reported below the LOR for rinsate samples.				
Trip Blanks	Trip blank samples were submitted to the laboratory at a rate of one per batch of primary samples delivered to the laboratory (two in total). Concentrations were reported below the LOR for all analytes tested in the trip blank. Trip blanks were not submitted for batches where samples on private properties were collected.				
Eskies to Laboratory	A total of four eskies of samples in two deliveries were submitted to ALS across the sampling event. Two eskies were submitted to NMI.				
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples (four duplicates and triplicates for groundwater, four duplicates and triplicates for surface water and three duplicates and triplicates for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for groundwater and surface water and slightly below 10% for sediment.				
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 6.1°C and 10.8°C. All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.				
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F .				

Laboratory QA/QC

Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none"> Laboratory duplicates for PFAS in water (8.45%) were below the expected rate of 10% in ET2201359. Laboratory duplicates for PFAS in water (7.65%) were below the expected rate of 10% in ET2201060. Matrix spikes for PFAS in water (0.00%) were below the expected rate of 5% in ET2201060.
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	<p>Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples with the exception of:</p> <ul style="list-style-type: none"> perfluorooctane sulfonic acid (PFOS) had an RPD of 26%, above the acceptance limit of 20% for laboratory duplicates. <p>Laboratory duplicates were not performed for batch RN1345718.</p>
Laboratory control spike (LCS) recovery	<p>All LCS recoveries were reported within acceptable limits, except:</p> <ul style="list-style-type: none"> Recoveries associated with water laboratory control sample QC-4195813-002_ET2201060 (10:2 FTS, PFOS, MeFOSA, PFPeS, 6:2 FTS, 8:2 FTS) Recoveries associated with soil laboratory control sample QC-4214937-002_ET2201359 (PFPeS, PFDA) Recoveries associated with water laboratory control sample QC-4217837-002_ET2201359 (PFDA, PFNA, 8:2 FTS) Recoveries associated with water laboratory control sample QC-4217837-002_ET2201357 (MeFOSA, 6:2 FTS) Recoveries associated with water laboratory control sample QC-4217837-002_ET2201358 (MeFOSA, 6:2 FTS) Recoveries associated with soil laboratory control sample QC-4309342-002_ET2202340 (10:2 FTS, PFUnDA, PFDS,PFBA, PFHpA, 4:2 FTS, 8:2 FTS)
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none"> Perfluorohexane sulfonic acid (PFHxS), PFOS, perfluorohexanoic acid (PFHxA) perfluorooctanoic acid (PFOA) and perfluorooctane sulfonamide (FOSA) were not determined in soil in batch ET2201359 due to background level being greater than or equal to four times the spike level. PFHxS, PFOS, perfluorobutane sulfonic acid (PFBS) and 6:2 Fluorotelomer sulfonic acid (6:2 FTS) were not determined in soil in batch ET2201358 due to background level being greater than or equal to four times the spike level. Perfluorohexanoic acid (PFHxA), PFHxS and PFOS were not determined in water in batch ET2201358 due to background level being greater than or equal to four times the spike level. Perfluorohexanoic acid (PFHxA), PFHxS and PFOS were not determined in water in batch ET2201357 due to background level being greater than or equal to four times the spike level.

Surrogate spike recovery	No surrogate recovery outliers were reported. High PFAS surrogate recoveries accepted - results corrected for recovery in batch RN1345718.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels. LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples: <ul style="list-style-type: none"> • 0229_MW117D_220218 in ET2201060. • 0229_SD144_220301 in ET2201359.
Field duplicate RPDs	Field duplicate RPDs were reported within control limits.
Field triplicate RPDs	Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold): <ul style="list-style-type: none"> • PFHxS in 0229_MW220S_220303 and 0229_QC207_220303. • PFOS and PFHxS in 0229_SD139_220301 and 0229_QC103_220301. • PFHxS in 0229_SD139_220301 and 0229_QC203_220301 • PFOS and PFHxS in 0229_MW138_220303 and 0229_QC208_220303. <p>Triplicate concentrations were within the same order of magnitude compared to the concentrations in the primary sample and this is not considered to impact interpretation of results. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.</p>

Date Analysis Commenced : 24-Feb-2022
Issue Date : 01-Mar-2022 14:36

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- \$\$ conducted by ALS Brisbane, NATA Site No. 818.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X - PFAS: Whole bottle extraction was not possible for sample "0229_MW117D_220218". Sample required dilution prior to extraction due to matrix interference (high sediment content). LOR values have been adjusted accordingly. The LOR of PFBS has been further raised due to additional matrix interference.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Date Samples Received : 22-Feb-2022
Date Analysis Commenced : 24-Feb-2022
Issue Date : 01-Mar-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], Assistant Laboratory Manager, Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2201060	Page	: 1 of 5
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 22-Feb-2022
Site	: QLD_0229	Issue Date	: 01-Mar-2022
Sampler	: [REDACTED]	No. of samples received	: 5
Order number	: -	No. of samples analysed	: 5

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	13	7.69	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	13	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✘ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- \$\$ conducted by ALS Brisbane, NATA Site No. 818.
- ***Samples were originally received by ALS Townsville on 18/02/21 (18.6°C), and forwarded to ALS Brisbane for analysis.**
- **For your reference: sample '0229_MW118_220218' was received with an empty container due to an unscrewed lid. This container has not been logged in the work order. Please take this into consideration when reviewing your results.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], 2IC Organic Chemist, Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: WATER

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: WATER

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2206229--001	Anonymous	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	EB2206229--001	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231B: Perfluoroalkyl Carboxylic Acids	EB2206229--001	Anonymous	Perfluorohexanoic acid (PFHxA)	307-24-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: WATER

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	7	14.29	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	7	14.29	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	7	14.29	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	7	14.29	5.00	✔	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIPT NOTIFICATION (SRN)

Work Order : ET2201357

Client : AECOM AUSTRALIA PTY LTD
Contact : [Redacted]
Address : PO BOX 5175 TOWNSVILLE QLD, AUSTRALIA 4870

Quote number : ET2021AECOMAU0001 (TV/007/21 v2 - Compass)
QC Level : NEPM 2013 B3 & ALS QC Standard

Dates

Date Samples Received : 08-Mar-2022 09:10
Issue Date : 08-Mar-2022
Client Requested Due Date : 16-Mar-2022
Scheduled Reporting Date : 16-Mar-2022

Delivery Details

Mode of Delivery : Carrier
Security Seal : Intact.
No. of coolers/boxes : 1
Temperature : 6.1°C - Ice present
Receipt Detail : HARD ESKY
No. of samples received / analysed : 1 / 1

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
08/03/2022: SRN has been resent to acknowledge the reporting date has been updated to the 16/03/22 from the 15/03/22. For any further information regarding these adjustments please contact client services at [Redacted]
*Samples were originally received by ALS Townsville on 04/03/2022 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
\$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

Laboratory sample ID	Sampling date / time	Sample ID	WATER - EP231X PFAS - Full Suite (28 analytes)

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
██████████	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2201358	Page	: 1 of 5
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 08-Mar-2022
Site	: QLD_0229	Issue Date	: 17-Mar-2022
Sampler	: [REDACTED]	No. of samples received	: 4
Order number	: 60612487_3.1	No. of samples analysed	: 4

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2205417--004	Anonymous	Perfluorobutane sulfonic acid (PFBS)	375-73-5	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	EB2205417--004	Anonymous	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	EB2205417--004	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231D: (n:2) Fluorotelomer Sulfonic Acids	EB2205417--004	Anonymous	6:2 Fluorotelomer sulfonic acid (6:2 FTS)	27619-97-2	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2206229--001	Anonymous	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	EB2206229--001	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231B: Perfluoroalkyl Carboxylic Acids	EB2206229--001	Anonymous	Perfluorohexanoic acid (PFHxA)	307-24-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Receipt Detail	: HARD ESKY	No. of samples received / analysed	: 4 / 4

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- *Samples were originally received by ALS Townsville on 04/03/2022 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	2IC Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants and matrix interferences (high sediment content). LOR values have been adjusted accordingly.
- EP231X PFAS: Sample '0229_SD109_220301' (ET2201359-004) required dilution prior to analysis due to the presence of high level contaminants. LOR values have been adjusted accordingly. The LORs of PFBA and PFUnDA have been raised further due to matrix interference.
- EP231X PFAS: Limits of reporting for sample '0229_SD144_220301' (ET2201359-007) have been raised due to the high moisture content of the sample. The LOR of PFBS has been raised further due to matrix interference.
- EP231X PFAS: Sample '0229_SD140_220301' (ET2201359-002) shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EP231X PFAS: The LOR of PFDS for sample '0229_QC103_220301' (ET2201359-012) has been raised due to sample matrix interferences.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Date Analysis Commenced : 08-Mar-2022
Issue Date : 18-Mar-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes entries for Senior Inorganic Chemist and 2IC Organic Chemist at Brisbane Inorganics and Organics, Stafford, QLD.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2201359	Page	: 1 of 12
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 08-Mar-2022
Site	: QLD_0229	Issue Date	: 18-Mar-2022
Sampler	: [REDACTED]	No. of samples received	: 101
Order number	: 60612487_3.1	No. of samples analysed	: 100

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Laboratory Control outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2201359--002	0229_SD140_220301	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	26.0 %	0% - 20%	RPD exceeds LOR based limits
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2201359--004	0229_SD109_220301	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2201359--004	0229_SD109_220301	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231B: Perfluoroalkyl Carboxylic Acids	ET2201359--004	0229_SD109_220301	Perfluorohexanoic acid (PFHxA)	307-24-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231B: Perfluoroalkyl Carboxylic Acids	ET2201359--004	0229_SD109_220301	Perfluorooctanoic acid (PFOA)	335-67-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231C: Perfluoroalkyl Sulfonamides	ET2201359--004	0229_SD109_220301	Perfluorooctane sulfonamide (FOSA)	754-91-6	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	6	71	8.45	10.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<i>Analytical Methods</i>							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	3	29	10.34	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	29	10.34	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	29	6.90	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 2	Temperature	: 10.8°C, 6.1°C - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 101 / 100

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- Please be advised that low volume was received for samples 0229_MW106_220303 & 0229_QC302_220302. ALS will attempt to undertake all analysis requested
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order : **ET2202340**
Client : **AECOM AUSTRALIA PTY LTD**
Contact : [REDACTED]
Address : PO BOX 1307
 FORTITUDE VALLEY QLD, AUSTRALIA 4006
Telephone : ----
Project : QLD_0229_PFASOMP_20
Order number : 60612487_3.2
C-O-C number : 36676
Sampler : [REDACTED]
Site : QLD_0229
Quote number : TV/007/21 v2 - Compass
No. of samples received : 16
No. of samples analysed : 16

Page : 1 of 13
Laboratory : Environmental Division Townsville
Contact : [REDACTED]
Address : 13 Carlton Street, Kirwan Townsville QLD Australia 4815
Telephone : [REDACTED]
Date Samples Received : 27-Apr-2022 08:50
Date Analysis Commenced : 28-Apr-2022
Issue Date : 06-May-2022 15:34

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	2IC Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Client : AECOM AUSTRALIA PTY LTD
Contact :
Address : PO BOX 1307
FORTITUDE VALLEY QLD, AUSTRALIA 4006
Telephone :
Project : QLD_0229_PFASOMP_20
Order number : 60612487_3.2
C-O-C number : 36676
Sampler :
Site : QLD_0229
Quote number : TV/007/21 v2 - Compass
No. of samples received : 16
No. of samples analysed : 16

Page : 1 of 12
Laboratory : Environmental Division Townsville
Contact :
Address : 13 Carlton Street, Kirwan Townsville QLD Australia 4815
Telephone :
Date Samples Received : 27-Apr-2022
Date Analysis Commenced : 28-Apr-2022
Issue Date : 06-May-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes entries for Senior Inorganic Chemist and 2IC Organic Chemist at Brisbane Inorganics and Organics, Stafford, QLD.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2202340	Page	: 1 of 6
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 27-Apr-2022
Site	: QLD_0229	Issue Date	: 06-May-2022
Sampler	: [REDACTED]	No. of samples received	: 16
Order number	: 60612487_3.2	No. of samples analysed	: 16

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- **28/04/2022: SRN has been resent to acknowledge additional of PFAS to samples -015 & -016. For any further information regarding these adjustments please contact client services at [REDACTED]**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 9
Report No. RN1345718

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW
Accreditation No. 198

16-MAR-2022

Dates						
Date extracted		2-MAY-2022				
Date analysed		2-MAY-2022				

N22/007832

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.δ

REPORT OF ANALYSIS

Results expressed in percentage (%) or ug/L wherever appropriate.

Acceptable Spike recovery is 50-150%.

Maximum acceptable RPDs on spikes and duplicates is 40%.

'NA' = Not Applicable.

RPD= Relative Percentage Difference.

SAMPLE RECEIVED CONDITION

Date samples received: 9-MAR-2022

Sample received in good order: Yes

NMI Quotation no. provided:

Client purchase order number: 60612487_3_1

Temperature of samples: Chilled

Comments: Updated

Mode of Delivery: Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at <https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020) at Lavarack Barracks Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**, PFAS Source Areas are identified and defined in the PMAP (Department of Defence, 2020). The OMP (Department of Defence, 2020) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, March/April 2021, August 2021, February to April 2022, August 2022, and February/March 2023.

These sampling events are scheduled to include:

- Groundwater sampling of 31 on-Base wells at Lavarack Barracks and nine off-Base wells in the suburbs of Annandale, Idalia, and Wulguru.
- Sediment sampling at 18 on-Base locations at Lavarack Barracks and 13 off-Base locations in the Ross River and waterways in Annandale and Idalia with co-located surface water sampling when water is present.

A sampling and analysis quality plan (SAQP Rev 6, AECOM, 2022) was prepared to provide details of the sampling event. Where deviations from the SAQP occurred, these are noted in this report.

This sampling event factual report has been prepared to report the results of the 2022 Dry Season Sampling Event, which was completed from 22 to 26 August, 3 September 2022 and 7 October 2022. This report specifically highlights first-time detections and/or new exceedances of human health or ecological screening criteria for perfluorooctane sulfonate (PFOS), PFOS + perfluorohexane sulfonic acid (PFHxS) and / or perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objective of the OMP is to “*set out a program of ongoing sampling to assess changes in the nature and extent of PFAS concentration within the environment, where Defence’s historical use of legacy [Aqueous Film Forming Foam] AFFF has led to an identified potential risk to a receptor, or potential future risk to a receptor*” (Department of Defence, 2020).

The objectives of the SAQP (AECOM, 2022) are to:

- Document the proposed sampling in accordance with the OMP prepared as part of the PMAP (Department of Defence, 2020).
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence’s approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2022 dry season sampling event scope of works in accordance with the SAQP (AECOM, 2022).

2.0 Scope of Work

The sampling event at the Base was completed in general accordance with the SAQP (AECOM, 2022). In summary, the scope of works for this sampling event included:

- Review of the SAQP prior to the monitoring event to ensure compliance with relevant Australia guidance and suitable for the proposed sampling.
- *August 2022* – Collection of 31 sediment and 21 co-located surface water samples (where water was present) including 18 on-Base and 13 off-Base locations (refer to **Figure 2** and **3**, **Appendix A**). Collection of groundwater samples at 38 locations including 29 on-Base and 9 off-Base locations.
- *September 2022* – Collection of one sediment sample on-Base which was unable to be accessed during the August sampling event.
- *October 2022* – Collection of one groundwater sample and one surface water sample. Due to anomalous PFAS detections in groundwater from MW131 and surface water from SW110, during the August sampling round, replicate samples were collected, refer to **Section 3.7** for further information.
- Collection of groundwater gauging data and water quality parameter data for surface water and groundwater sample locations (where water was present).
- Analysis of all samples for the PFAS suite (28 analytes) at the standard limit of reporting (LOR).
- Collection of field duplicate and triplicate samples at a rate of 1 in 10 primary samples, one rinsate sample per fieldwork day, and one trip blank per batch analysed for PFAS suite (28 analytes).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report.

Refer tables below for nominated sampling locations as outlined in the SAQP (AECOM, 2022). Deviations from the SAQP are identified in **Section 3.7**.

Table 1 Planned Groundwater Sampling Locations

Source Area	Monitoring Well ID	Total wells
Eastern PFAS Contamination Area	MW018, MW114, MW115, MW116, MW139	5
Former B Squadron	MW135	1
Former Fire Station	MW105, MW128	2
Former Fire Training Area	MW131 ¹	1
Former Helicopter Squadron	MW102	1
Lavarack Golf Course and Sporting Fields	MW065, MW120, MW121, MW122, MW123I, MW123S	6
Monocell	MW072, MW074, MW106	3
Stockpile Designated Area 2	MW141	1
Suspected Aqueous Film Forming Foam (AFFF) Disposal Area	MW101	1
Top, Middle and Lower Dams	MW138	1
Base Boundary – On-Base	MW002, MW003, MW118, MW119, MW124, MW125I, MW125S	7
Off-Base	MW205S, MW212, MW217, MW220S, MW226, MW232, MW233, MW235S, MW236S	9

¹Supplementary sample collected in October 2022 to verify results.

Table 2 Planned Surface Water Sampling Locations

Source Area	Surface Water Location ID
Eastern PFAS Contamination Area	SW119 [#] , SW121
Former Fire Station	SW109, SW110 ¹
Lavarack Golf Course & Sporting Field	SW129 [#] , SW130 [#]
Top Middle and Lower Dams ¹	SW139, SW140, SW144
Remaining on-Base	SW113, SW120 [#]
Base Boundary	SW126 [#] , SW128 [#] , SW132 [#] , SW133 [#] , SW134 [#] , SW135, SW136 [#]
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245

¹Supplementary sample collected in October 2022 to verify results.

[#] Location was dry during dry season 2022 sampling event and therefore no sample collected at this location.

Table 3 Planned Sediment Sampling Locations

Source Area	Sediment Location ID
Eastern PFAS Contamination Area	SD119, SD121
Former Fire Station	SD109, SD110
Lavarack Golf Course and Sporting Fields	SD129, SD130
Top Middle and Lower Dams ¹	SD139, SD140, SD144
Remaining on-Base	SD113, SD120
Base Boundary	SD126, SD128, SD132, SD133, SD134, SD135, SD136
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245

3.0 Methodology

The methodology used for 2022 dry season sampling event was in general accordance with the SAQP (AECOM, 2022) and is summarised in **Sections 3.1-3.3**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	<p>Depth to groundwater was measured at the beginning of the sampling round at all wells. Only wells which are not tidally influenced and screened within the shallow aquifer were used for inferring groundwater flow direction and contours as presented on Figure 4, Appendix A.</p> <p>The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.</p>
Water Quality Parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T1). Equipment calibration certificates for the water quality meter are provided in Appendix F.</p>
Sampling Methodology	<p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1, Appendix B).</p> <p>For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer.</p> <p>A decontaminated steel bailer may be used to collect samples where there is insufficient volume available in the HydraSleeve™ for sampling.</p>

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T5, Appendix B .

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 7**, below.

Table 7 QA/QC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.

Item	Details
Sample Analysis	<p>All primary samples were submitted for PFAS suite analysis using the standard levels of detection.</p> <p>Australian Laboratory Services (ALS) Environmental Pty Ltd Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, New South Wales was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, (HEPA 2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2022), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 8** below.

Table 8 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria, as well as one surface water location (SW245) which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

3.6 Data Quality Objectives and Data Validation

The data quality objectives (DQO) and data quality indicators (DQI) adopted for these works are presented in the SAQP (AECOM, 2022).

Data validation assessment is provided in **Appendix C**. Based on anomalous results identified in the August 2022 data set, resampling at two locations (SW110 and MW131) was undertaken, in October 2022, to validate the results. These results are discussed in **Section 4.1.2** (MW131) and **Section 4.2.2** (SW110) and confirmed new maximum concentrations for PFAS at both locations.

Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during August, September and October 2022 have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 9 lists the deviations from the SAQP (AECOM, 2022) during this sampling round.

Table 9 Deviations from the SAQP during 2022 Dry Season Sampling Event

SAQP Deviation	Comment/Justification	Impact on Dataset
Collection of surface water at SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136	No surface water was present during the dry season sampling event at SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136.	Minor – No data available at these locations for dry season 2022. The data set is considered representative of the conditions within the Management Area being monitored.
Gauging and sampling at MW235S.	Depth to groundwater could not be measured at MW235S during the gauging round.	Following clearing of the roots in the well, samples were able to be collected using a decontaminated steel bailer from MW235S and sufficient gauging data was collected across the Base to determine groundwater flow direction. No impact on the data set.
Collection of sediment sample from SD120.	Sediment was collected at SD120 in September 2022 after the main sampling event due to access issues during the August sampling round.	The location was able to be accessed and a sample obtained with no impact on the data set.
Collection of additional groundwater sample at MW131. Trip blank and rinsate samples not collected for verification sampling.	Laboratory analytical results for the sample collected at MW131 on 26 August 2022 indicated anomalous PFAS detections (sum of PFAS 656 µg/L). Due to the anomaly, the well was resampled on 7 October 2022 to verify the detections.	Resampling of the well indicated PFAS concentrations were closer to the previous historical maximum (pre-August 2022) therefore more representative of groundwater PFAS concentrations and accepted as the dry season result for 2022. No impact to data set from absence of trip blank and rinsate for verification sampling.

SAQP Deviation	Comment/Justification	Impact on Dataset
<p>Collection of additional surface water sample at SW110. Trip blank and rinsate samples not collected for verification sampling.</p>	<p>Laboratory analytical results for the sample collected at SW110 on 22 August 2022 indicated anomalous PFAS detections (sum of PFAS 95.6 µg/L). Due to the anomaly, the location was resampled on 7 October 2022 to verify the detections.</p>	<p>Resampling of the location indicated PFAS concentrations were closer to the August 2022 sampling result and therefore representative of groundwater PFAS concentrations at this location in the dry season for 2022.</p> <p>No impact to data set from absence of trip blank and rinsate for verification sampling.</p>

4.0 Field Observations and Results

The 2022 dry season sampling event was completed between 22 and 26 August, with one sample (SD120) collected on 3 September 2022 and additional sampling completed at two locations on 7 October 2022. Groundwater gauging and deployment of HydraSleeves™ in wells which conflict with other sampling programs, was conducted at the beginning of the sampling round.

The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 10**.

Table 10 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	<p>The Bureau of Meteorology (BOM) (BOM, 2022) reported the following monthly rainfall data leading up to and during the 2022 dry season sampling event:</p> <ul style="list-style-type: none"> • May 2022: 153.0 mm • June 2022: 24.0 mm • July 2022: 50.0 mm • August 2022: 1.0 mm • September 2022: 21.2 mm • October 2022: 41.6 mm <p>Weather was warm and sunny during the sampling program between August and October 2022. The conditions monitored were representative of dry season conditions within the Management Area.</p>
Estate Management Works or Training Activities	<p>Construction associated with the Land 400 project was underway during the sampling event, on the corner of Lachlan Wilson Drive and Gallipoli Drive. This did not impact access to sample locations, however, earthworks in this area have the potential to impact PFAS concentrations in surface water and sediment samples down gradient of the project, near the Base boundary.</p> <p>Soil disturbance activities were identified on the corner of Andrew Ball Drive and Gallipoli Drive comprising the stockpiling of soils at the southern end of the Middle Dam.</p> <p>No other estate management works, or training exercises impacted access to sample groundwater, surface water and sediment locations.</p>

The results of the sampling event are summarised in **Sections 4.1-4.3**.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 11 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	All monitoring wells were observed to be in serviceable condition with the exception of MW115 which has a bend in the casing approximately 0.75 metres below top of casing (mBTOC).
Field Observations	Groundwater from four monitoring well locations (MW115, MW205S, MW212 and MW217) had a sulphurous odour. A slight organic odour was recorded during the sampling of monitoring well MW101.

Item	Observations
	<p>Groundwater colour was typically recorded as clear. Yellow coloured groundwater was observed at MW212 and MW232. Grey/brown coloured groundwater was observed at MW217 and light brown coloured groundwater was observed at MW236S.</p> <p>Turbidity was typically recorded as low, with medium level turbidity observed at six well locations (MW018, MW123S, MW212, MW217, MW235S and MW236S).</p> <p>No visible or olfactory indications of contamination were observed during the sampling round.</p> <p>Field observations are presented Table T1 in Appendix B.</p>
Depth to Groundwater	<p>Depth to groundwater ranged between 0.465 (MW232) and 5.824 (MW205S) mBTOC. It is noted that multiple groundwater systems are present across the Management Area. Groundwater elevations within the shallow (alluvial) aquifer were between 1.845 (MW232) and 25.507 (MW141) metres Australian Height Datum (mAHD). Groundwater elevations within the deeper (rock) aquifer were between 8.74 (MW115) and 19.175 (MW106) mAHD.</p> <p>Groundwater gauging data are presented in Table T1 in Appendix B.</p>
Groundwater Flow Direction	<p>Groundwater contours and inferred groundwater flow directions in August 2022 are shown on Figure 4 in Appendix A. The inferred local groundwater flow direction for the shallow aquifer is to the north across the western portion of the Site and north east in the eastern portion of the Site, consistent with previous monitoring rounds. Monitoring wells which are tidally influenced have been removed from the contours as have wells MW074, MW226, MW105 and MW128 which were identified to have incorrect survey data.</p>
Water Quality Parameters	<p>Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below, covering all sampling completed:</p> <ul style="list-style-type: none"> • DO results ranged between 0.30 mg/L (MW220S) to 8.3 mg/L (MW235S) indicating poorly to well oxygenated conditions across the Management Area. Anomalous results were reported for samples from MW018, MW002 and MW125I. • EC ranged from 719 µS/cm (MW115) to 42,048 µS/cm (MW232) indicating fresh to saline conditions across the Management Area. • pH ranged from 5.68 (MW217) to 7.91 (MW115). pH results generally indicated slightly acidic to slightly alkaline conditions across the Management Area. • ORP ranged from -153.4 mV (MW115) to 180.0 mV (MW131) indicating moderately to strongly reducing conditions. • Temperature ranged from 21.5 °C (MW226) to 28.2 °C (MW074). <p>These results are generally consistent with the groundwater quality parameters from the previous four monitoring rounds since dry season 2020.</p>

4.1.2 Groundwater Analytical Results

Of the 38 groundwater wells sampled during this event, 35 samples reported concentrations of PFAS at or above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**.

There were no first-time detections or new exceedances of the human health or ecological guidelines during the sampling. Four of the nine samples collected off-Base, exceeded the adopted drinking water guideline for PFOS+PFHxS. One exceedance of the ecological guideline for PFOS was reported in off-Base well (MW236S). A total of 18 on-Base and boundary samples exceeded the ecological guideline (for PFOS). No on or off Base samples exceeded the PFOA ecological guideline.

Historical groundwater results are presented in **Table T7, Appendix B**.

Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations.

It is noted that concentrations of PFOS and PFHxS at MW131 were higher than historically reported. This location was resampled on 7 October and confirmed new historical maximum concentrations for PFOS (45.3 µg/L), PFOA (3.6 µg/L) and PFHxS (36.8 µg/L). MW131 is located at the Former Fire Training Area as shown in **Figure 1 (Appendix A)**.

4.2 Surface Water

4.2.1 Observations and Field Measurements

Table 12 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event. SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136 were dry during the August sampling event and could not be sampled.
Field Observations	Surface water at SW121 exhibited a slight biological sheen on the surface and was noted to have sediment and algae. Surface water on-Base was observed to be clear. Yellow coloured surface water was observed at six locations (SW203, SW205, SW217, SW220, SW232 and SW242), and a yellowish-brown colour observed at SW243. No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations. Field observations are presented Table T3 in Appendix B .
Water Quality Parameters	Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T3 in Appendix B and are summarised below: <ul style="list-style-type: none"> DO results ranged between 1.87 mg/L (SW144) and 12.66 mg/L (SW220) indicating moderately to well oxygenated conditions. EC ranged from 190.5 µS/cm (SW245) 43,042 µS/cm (SW243) indicating relatively fresh conditions in urban runoff areas and saline conditions in areas with tidal connectivity. pH ranged from 6.90 (SW203) to 8.58 (SW220). pH results generally indicated near neutral to alkaline conditions. ORP ranged from -48.5 mV (SW121) to 128.4 mV (SW217) indicating moderately to strongly reducing conditions. Temperature ranged from 15.1°C (SW212) to 26.9°C (SW244).

4.2.2 PFAS Surface Water Analytical Results

Samples collected from 18 locations reported concentrations of PFAS above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4 in Appendix B**. There were no first-time detections of PFOS, PFOA or sum of PFOS+PFHxS

One new exceedance of recreational guidelines for PFOS+PFHxS was reported at SW220, located off-Base, as shown on **Figure 5, in Appendix A**. PFOS concentrations in nine samples exceeded the adopted ecological guidelines for PFOS. Two samples exceeded the ecological guideline for PFOA. Sum of PFOS+PFHxS concentrations in two on-Base samples (SW109 and SW110) and one off-Base sample (SW220) exceeded the adopted recreational use guidelines (**Table T4, Appendix B**).

The following historical maximum concentrations were recorded during the August 2022 sampling round:

- PFOS at SW109.
- PFOS, PFOA, sum of PFOS + PFHxS, at SW110 located at the Former Fire Station source area. This location was resampled on 7 October and confirmed new historical maximum concentrations for the PFAS listed.
- Sum of PFOS + PFHxS at SW220.
- Sum of PFOS + PFHxS at SW233.

Historical surface water results are presented in **Table T8, Appendix B**.

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 13 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible. During the August 2022 sampling event sediment was collected at all 31 sampling locations.
Field Observations	A sulphurous odour was detected at sampling location SD245. Organic odours were detected at sample locations SD121, SD139 and SD220. Sediment logging and observation data are presented in Table T5, Appendix B .

4.3.2 PFAS Sediment Analytical Results

Of the 31 sediment samples collected, 25 samples reported concentrations of PFAS above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T6 in Appendix B**.

Historical sediment results are presented in **Table T9, Appendix B**. There were no first-time detections of PFOA or PFOS+PFHxS in sediment. The following locations recorded historical maximum concentrations during the August 2022 sampling round:

- PFOS, sum of PFOS + PFHxS at SD109
- PFOA and PFOS at SD121
- PFOS and sum of PFOS + PFHxS at SD126
- PFOS and sum of PFOS + PFHxS at SD129
- PFOS and sum of PFOS + PFHxS at SD133
- PFOS and sum of PFOS + PFHxS at SD242.

There are no endorsed human health or ecological guideline values available for sediment.

5.0 Summary and Next Sampling Event

5.1 Summary of Sampling Event

The routine OMP Dry Season Sampling Event was undertaken at the Base between 22 and 26 August 2022. One sediment sample was collected on 3 September 2022 at SD120 as access was not available during the main sampling event. Due to the anomalous PFAS detections present in sample MW131 and SW110 from the main sampling event, these locations were resampled on 7 October 2022. This dry season sampling event included sampling from 38 groundwater monitoring locations, 21 surface water monitoring locations and 31 sediment monitoring locations.

Table 14 summarises the findings of the August to October 2022 sampling events and the recommended actions.

Table 14 Summary of Sampling Event

Item	Comment	Recommended Actions
<u>Access to sampling locations</u>	All groundwater monitoring wells, surface water and sediment locations were accessible during the dry season monitoring event.	Ongoing monitoring in accordance with the OMP.
<u>Surface Water:</u> Insufficient water to sample	During the August 2022 sampling event, surface water was not present at 10 monitoring locations, SW119, SW120, SW126, SW128, SW129, SW130, SW132, SW133, SW134 and SW136, at the time of sample collection.	Ongoing monitoring in accordance with the OMP. Review locations in light of sample suitability if long term matrix availability becomes a constraint.
<u>Analytical Results</u>	PFAS were detected at or above the laboratory LOR in 35 of the 38 groundwater samples, 18 of the 21 surface water samples and 25 of the 31 sediment samples analysed.	Ongoing monitoring in accordance with the OMP.
<u>First-time detections and new exceedances.</u>	There were no first-time detections of Sum of PFOS+PFHxS or PFOA. There were no new exceedances of drinking water guidelines (off-site samples only) or the 95% species protection ecological guidelines (HEPA, 2020). There was one first-time exceedance of the NHMRC (2019) recreational use guidelines for PFOS+PFHxS at SW220.	Ongoing monitoring in accordance with the OMP.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for March 2023.

5.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled for March 2023.

Analytical Tables

Table T3: Surface Water Quality Parameter Results

Location Code	Sample Date	DO mg/L	EC µS/cm	pH	Redox (mV)	Temp (°C)	Turbidity	Water Colour	Odour	Sheen	Comments
Eastern PFAS Contamination Area											
SW121	22/08/2022	4.17	4076	7.05	-48.5	23.8	Low	Clear	No odour	Slight sheen	Pale orange algae present. Water slightly flowing.
Former Fire Station											
SW109	22/08/2022	5.02	1139	7.82	86.5	21.6	Low	Clear	No odour	No sheen	Limited water within drainage channel (no flow), highly vegetated, some sediment in water sample
SW110	22/08/2022	2.99	2849	7.74	61.64	23.4	Low	Clear	No odour	No sheen	Limited amount of water to sample from (no flow), some sediment in water sample
Top, Middle and Lower Dams											
SW139	22/08/2022	2.8	520	8.2	100.8	22.5	Low	Clear	No odour	No sheen	High plant content, difficult to obtain sample. No flow
SW140	22/08/2022	5.55	440.5	7.85	109.9	23.2	Low	Clear	No odour	No sheen	Thick grass at bank. No flow
SW144	22/08/2022	1.87	218.9	8.04	100	21.7	Low	Clear	No odour	No Sheen	Shady area, shallow and silty bank some sediment in sample due to low water level. No flow.
Remaining On-Base											
SW113	22/08/2022	11.97	405.3	8.24	97.5	23.3	Low	Clear	No odour	No sheen	Some surface algae present. No flow.
Base Boundary											
SW135	22/08/2022	7.7	634	7.83	77.6	23.2	Low	Clear	No odour	No Sheen	Sample from drainage culvert, refuse comprising empty bottles was present at this location. Low flow.
Off-Base											
SW203	22/08/2022	3.72	3217	6.9	94.6	22.4	Low	Pale yellow 5Y 8/3	No odour	No sheen	Sandy creek, slow flowing, approximately 50 cm deep, 10 m wide
SW205	22/08/2022	5.55	30109	7.4	110.4	26.7	Clear	Pale yellow 5Y 8/3	No odour	No sheen	Collected on outgoing tide. Slow flowing water.
SW211	22/08/2022	2.24	8717	7.18	70.1	16.2	Low	Clear	No odour	No sheen	Drainage gully, some freshly cut grass in water. No flow.
SW212	22/08/2022	8.29	14992	8.1	71.9	15.1	Clear	Clear	No odour	No sheen	Large culvert, minimal water, slightly flowing
SW217	22/08/2022	2.83	1282	7.2	128.4	21.1	Low	Pale yellow 5Y 8/3	No odour	No sheen	Earthen creek, approximately 5 m across, 10 cm deep. No flow.
SW220	22/08/2022	12.66	3665	8.58	75.4	26	Clear	Pale yellow 5Y 8/3	No odour	No sheen	Adjacent to culvert.
SW227	22/08/2022	5.63	257.1	7.22	60.1	20.5	Low	Clear	No odour	No sheen	Middle of river sample. No flow
SW232	22/08/2022	4.38	33869	7.76	87.7	26.1	Low	Pale yellow 5Y 8/3	No odour	No sheen	Earthen drain adjacent road culvert. Slow flowing
SW233	22/08/2022	6.01	218.1	7.5	82.12	22.5	Low	Clear	No odour	No sheen	Shallow creek. Some reeds in sample location. No flow.
SW242	22/08/2022	5.62	35095	8.12	89.9	25.3	Clear	Pale yellow 5Y 8/3	No odour	No sheen	Man made lake, sample collected 30 cm out from bank. No flow
SW243	22/08/2022	6.22	43042	8.03	110.4	26.8	Medium	Yellowish Brown 10YR 5/6	No odour	No sheen	Idalia Lake, approximately 20 cm deep at sample point. No flow
SW244	22/08/2022	4.99	209.5	7.55	41.7	26.9	Low	Clear	No odour	No sheen	Middle of river, above weir. No flow
SW245	22/08/2022	5	190.5	7.3	66	23.9	Low	Clear	No odour	No sheen	Middle of river, above weir. No flow

DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Eh - Redox Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre

 mV - millivolt

Location ID	Date	Sample Description	Odour	Comment
Eastern PFAS Contamination Area				
SD119	22/08/2022	gravelly SAND coarse, well graded, sub angular gravel, brown to yellow, moist	N	Some surface algae
SD121	22/08/2022	clayey SAND, medium density, dark grey, low plasticity, wet, trace silt	Y	Plant roots and surface algae
Former Fire Station				
SD109	22/08/2022	gravelly SAND, well graded, sub rounded gravel, dry	N	Some surface algae
SD110	22/08/2022	sandy CLAY, medium plasticity, dark grey, fine grained sand, wet	N	High organic content
Lavarack Golf Course & Sporting Field				
SD129	24/08/2022	SAND, medium to coarse grained, loose, brown to yellow, dry	N	Organics (leaves)
SD130	24/08/2022	SAND, medium to coarse grained, loose, brown to yellow, dry	N	Nil
Top, Middle and Lower Dams				
SD139	22/08/2022	Sandy CLAY, medium plasticity, dark brown, wet	Y	Organic odour, high organic content - leaves and plant roots
SD140	22/08/2022	gravelly SAND, fine to coarse, poorly graded, wet	N	High organic content
SD144	22/08/2022	sandy CLAY, low plasticity, fine grained sand, wet	N	Some organic content (leaves)
Remaining On-Base				
SD113	22/08/2022	gravelly SAND, well graded with sub rounded gravel, trace clay	N	Surface algae present
SD120	03/09/2022	gravelly SAND, well graded, medium grained, some medium angular to subangular gravel, brown to yellow	N	Minor organic material in sample
Base Boundary				
SD126	23/08/2022	SAND, light brown, medium grained, loose	N	Nil
SD128	23/08/2022	gravelly sandy CLAY, low plasticity, fine to coarse grained sand, fine to coarse angular gravel, moist, dark brown	N	Organic content (roots), location was dry
SD132	22/08/2022	silty CLAY, firm, medium plasticity, dark brown to black, trace fine to medium angular gravel	N	Nil
SD133	23/08/2022	gravelly sandy CLAY, grey, low plasticity, medium grained sand, fine to coarse angular gravel, dry	N	Organic content (grass and plat roots)
SD134	22/08/2022	sandy SILT, soft, black, non plastic, fine to medium sand, dry	N	Minor organic content
SD135	22/08/2022	gravelly SAND, fine to medium grained, poorly graded, wet	N	Organic content (roots)
SD136	23/08/2022	sandy CLAY, low plasticity, medium subangular sand, dark brown, high organic content	N	Upstream of a disturbed site - TCC sewer upgrade
Off-Base				
SD203	22/08/2022	SAND, loose, medium to coarse grained, light brown to yellow, wet	N	Nil
SD205	22/08/2022	gravelly SAND, poorly graded, loose, wet	N	Nil
SD211	25/08/2022	sandy CLAY, brown to black, low plasticity, fine to medium grained, wet	N	Organic content - roots and leaves
SD212	25/08/2022	gravelly SAND, brown, poorly graded, wet, some medium sub angular gravel	N	Some organic content (Plant roots and decomposed grass and leaves)
SD217	22/08/2022	sandy CLAY, firm, medium plasticity, wet, dark brown to black, fine grained sand	N	Organic content (roots and leaves)
SD220	22/08/2022	silty CLAY, grey and black, wet, medium plasticity	Y	Organic content
SD227	22/08/2022	silty SAND, light grey, fine to coarse grained	N	Nil
SD232	22/08/2022	silty CLAY, soft, medium plasticity, black, wet	N	Some organic content
SD233	22/08/2022	loamy SAND, low plasticity, dark brown, wet, fine grained sand, loose	N	Organic content - leaves
SD242	22/08/2022	sandy CALY, soft, medium plasticity, brown and black, wet, fine grained sand with some medium angular gravel	N	Nil
SD243	22/08/2022	clayey SAND, loose, fine grained, dark brown and black, low plasticity clay	N	Nil
SD244	22/08/2022	sandy GRAVEL, angular gravel, pale grey, wet	N	Nil
SD245	22/08/2022	silty SAND, pale grey, fine to coarse grained	Y	Sulfurous odour and high organic content

Table with columns for Location ID, Sample Date, and various PFAS compounds (H2 FTS, H3 FTS, EFOSEA, etc.) with values in ug/L. The table is organized into sections for Eastern PFAS Contamination Area, Former B Squadron, Former Fire Station, Former Helicopter Squadron, Lavarack Golf Course and Sporting Fields, and Monocell.

Table with columns for Location ID, Sample Date, and various PFAS compounds (H2 FTS, B2 FTS, etc.) with values in ug/L. Includes sections for Suspected AFFF Disposal Area, Top, Middle and Lower Dams, Base Boundary, and Off-Base.

denotes disturbance to the well may have impacted sample integrity

Table with columns for Location ID, Sample Date, and various PFAS compounds (A2-FTS, B2-FIS, B3-FIS, 10-2 FTS, EFOFA, EFOFAA, EFOFEE, FOSA, MFOFA, MFOFAA, MFOFEE, PFBS, PFPEs, PFPHS, PFPHS, PFOS, PFDS, PFBA, PFHXA, PFHPA, PFDA, PFDDA, PFNA, PFTEOA, PFTEOA, PFUNDA, Sum of PFOS and PFHxS, Sum of PFAS). Rows are grouped by location: Eastern PFAS Contamination Area, Former Fire Station, Lavarack Golf Course and Sporting Fields, Top, Middle and Lower Dams, Remaining On-Base, and Base Boundary.

Table with columns for Location ID, Sample Date, and various PFAS compounds (A2:FTS, B2:FTS, etc.) with numerical values. The table is organized into sections for different locations (SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245) and includes a 'Sum of PFOS and PFHxS' column.

Appendix C

Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	[REDACTED]	Date:	09/11/2022
Client:	Department of Defence				
Site:	Lavarack Barracks Townsville (0229)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	[REDACTED]	Date:	04/10/2022
No. of primary samples:	38 groundwater, 21 surface water, 30 sediment (August 2022), 1 sediment sample (September 2022) 1 groundwater, 1 surface water (October 2022)				
Laboratory:	ALS (Brisbane), NMI (Sydney)	Project Manager:	[REDACTED]		
Lab reference:	ET2204605, ET2204738, ET2205249, AECO06/220905 (RN1365263)				
Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.				
	The data are considered appropriate for use to meet the project objectives.				
Field QA/QC					
Sampling personnel	Sampling was conducted by suitably trained and experienced AECOM personnel from 22 August 2022 to 25 August 2022, . Re-sampling was conducted by AECOM personnel on 7 October 2022				
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection. MW235S was sampled with the use of a steel bailer due to possible presence of tree roots.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (8 in total). No rinsate sample was collected during re-sampling (October 2022). Concentrations of all analytes tested were reported below the LOR for rinsate samples.				
Trip Blanks	Trip blank samples were submitted to the laboratory at a rate of one per batch of primary samples delivered to the laboratory (two in total). Concentrations were reported below the LOR for all analytes tested in the trip blank. Trip blanks were not submitted for batches where samples on private properties were collected. No trip blank was submitted to the laboratory with samples collected during re-sampling (October 2022)				
Eskies to Laboratory	A total of five eskies of samples in three deliveries were submitted to ALS across the sampling event. One esky was submitted to NMI.				
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples (four duplicates and triplicates for groundwater, two duplicates and triplicates for surface water and four duplicates and triplicates for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for water and sediment.				
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 2.5°C and 6.1°C. All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.				
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F.				

Laboratory QA/QC

Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times except sample 0229_SD144_220822 which was extracted 7 days past the due date. A reason for this was not provided by the laboratory.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results were reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none">• Laboratory duplicates for PFAS in water (9.59%) were below the expected rate of 10% in ET2204605.• Laboratory duplicates for PFAS in water (6.67%) were below the expected rate of 10% in ET2204738.• Matrix spikes for PFAS in water (0.00%) were below the expected rate of 5% in ET22004738.• Laboratory duplicates were not completed by NMI.
Method Blank	No method blank outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples with the exception of batch RN1345718, for which no laboratory duplicates were completed.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits.
Matrix spike recovery	The following matrix spike recoveries were reported outside the acceptable range.

Analyte	Sample ID	Recovery (%)	Comment
Sediment			
Perfluorooctane sulfonic acid (PFOS)	0229_SD133_220823	46.5	Recovery less than lower data quality objective
	0229_SD220_220822	Not Determined	Background level greater than or equal to 4x spike level.
Perfluorohexanoic acid (PFHxA)	0229_SD133_220823	60.9	Recovery less than lower data quality objective
Perfluorodecanoic acid (PFDA)	0229_SD133_220823	63.3	
N-Ethyl perfluorooctane sulfonamidoethanol (EtFOSE)	0229_SD133_220823	57.8	
Fluorotelomer sulfonic acid (10:2 FTS)	0229_SD133_220823	67.0	
Water			
Perfluorobutane sulfonic acid (PFBS)	0229_SW232_220822	39	Recovery less than lower data quality objective
	0229_MW138_220824	Not Determined	Background level greater than or equal to 4x spike level.
Perfluoropentane sulfonic acid (PFPeS)	0229_MW138_220824	Not Determined	Background level greater than or equal to 4x spike level.
Perfluorohexane sulfonic acid (PFHxS)	0229_SW232_220822	29.5	Recovery less than lower data quality objective
	0229_MW122_220824	Not Determined	Background level greater than or equal to 4x spike level.
	0229_MW138_220824	Not Determined	
Perfluorooctane sulfonic acid (PFOS)	0229_SW232_220824	36.7	Recovery less than lower data quality objective
	0229_MW122_220824	Not Determined	Background level greater than or equal to 4x spike level.
	0229_MW138_220824		
Perfluorobutanoic acid (PFBA)	0229_MW122_220824	69.2	Recovery less than lower data quality objective
	0229_MW138_220824	52.1	
Perfluorohexanoic acid (PFHxA)	0229_MW138_220824	Not Determined	Background level greater than or equal to 4x spike level.

Surrogate spike recovery

Recovery was less than lower data quality objective for samples 0229_SD119_220822 (63%) and 0229_SD205_220822 (58.5%) for 13C4-PFOS in batch ET2204605.

QA/QC Data Evaluation

Comparison of Field Observations and Laboratory Results

Sum of PFHxS and PFOS, PFOS and PFOA concentrations at MW131 were reported higher than historic concentrations. It is noted that minor irrigation works had recently been completed nearby. MW131 was re-sampled in October 2022 to confirm results.

Data transcription

A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.

Limits of reporting

Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.

LOR values were adjusted for some analytes due to high concentrations at 0229_MW131_220826, 0229_SW109_220822, 0229_MW128_220824, 0229_MW072_220825, 0229_MW074_220825 in ET204605.

LOR values for some sediment samples were raised due to high moisture content.

Field duplicate RPDs

Field duplicate RPDs were reported within control limits except (the sample with the higher concentration is in bold):

- PFOS in **0229_SD233_220822** and 0229_QC103_220822.
- PFOS in **0229_SD126_220823** and 0229_QC105_220823.

Field triplicate RPDs

Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):

- PFPeS, Perfluoroheptane sulfonic acid (PFHpS), PFOS, Perfluoropentanoic acid (PFPeA), PFHxA, Perfluoroheptanoic acid (PFHpA) and PFOA in **0229_MW128_220824** and 0229_QC207_220824.
- PFHxS in **0229_MW102_220824** and 0229_QC208_220824.
- PFOS in **0229_SD233_220822** and 0229_QC203_220822.
- PFOS in 0229_SD126_220823 and **0229_QC205_220823**.

Triplicate concentrations were within the same order of magnitude compared to the concentrations in the primary sample and this is not considered to impact interpretation of results. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 100 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: Sample EB2226245-002 shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

--	---

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
██████████	Assistant Laboratory Manager	Brisbane Inorganics, Stafford, QLD
██████████	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Laboratory Control outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2226245--002	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	30.7 %	0% - 20%	RPD exceeds LOR based limits
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2225228--002	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	15	6.67	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	15	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method	Sample Date	Extraction / Preparation			Analysis

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- *Samples were originally received by ALS Townsville on 05/09/2022 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Whole bottle extraction was not possible for samples '0229_MW131_221007' (ET2205249-001) and '0229_SW110_221007' (ET2205249-002). Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

---	---

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
= Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2205249	Page	: 1 of 4
Client	: [REDACTED]	Laboratory	: Environmental Division Townsville
Contact	: [REDACTED]	Telephone	: +61 7 3552 8616
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 11-Oct-2022
Site	: QLD_0229	Issue Date	: 20-Oct-2022
Sampler	: [REDACTED]	No. of samples received	: 2
Order number	: 60612487_3.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	5	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	5	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✘ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- Samples were originally received by ALS Townsville on 10/10/22 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X: Poor surrogate recovery for samples ET2204605 due to sample matrix interference.
- EP231X: Poor matrix spike recovery for samples ET2204605-002,050 due to sample matrix interference.
- EP231X: Samples (ET2204605) required dilution due to high moisture content. LOR values have been adjusted accordingly.
- EP231X: Poor matrix spike recovery for sample ET2204605-069 due to sample matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- ****Manual Comment****to appear on COA**
- EP231X: Poor matrix spike recovery for sample ET2204605-082 due to sample matrix interference.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

---	---

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_20	Date Samples Received	: 30-Aug-2022
Site	: QLD_0229	Issue Date	: 16-Sep-2022
Sampler	: [REDACTED]	No. of samples received	: 107
Order number	: 60612487	No. of samples analysed	: 107

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.

Outliers : Analysis Holding Time Compliance

- Analysis Holding Time Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: SOIL

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	5	34	14.71	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	6	49	12.24	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	49	6.12	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- **Please be advised that an additional sample bottle labelled "SD144" has been added to its corresponding sample ID (ALS #29). If this is incorrect or for more information, please contact Client Services at [REDACTED]**
- ***Samples were originally received by ALS Townsville on 26/08/22 (10.4°C, 16.7°C), and forwarded to ALS Brisbane for analysis.**
- **02/09/2022: Please be advised that as per the email from [REDACTED] on the 02/09/2022, the sample IDs have been adjusted on Samples ALS #1, 2, 6, 7, 9, 11, 13, 21, 24, 25, 88, 89, 91, 102, 103, 104, 105 & 106. Analysis has also been applied to samples ALS #102, 103, 104, 105 & 106.**
- **02/09/2022: #2 - Please be advised that the sampling dates for Samples ALS #1 & #2 have been adjusted as per the email from [REDACTED] on the 02/09/2022.**
- **06/09/2022: Please be advised that as per the email from [REDACTED] on the 06/09/2022, the second jar received for Sample (ALS) #29 has now been added onto the end of the work order as Sample (ALS) #107 and the Sample ID's have been updated.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **Analysis will be conducted by ALS Environmental, Melbourne, NATA accreditation No. 825, Site No. 13778.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- **Extra samples were received labelled as 'SD121' (ALS #102), 'SD135' (ALS #103), 'SW_144' (ALS #104), 'QC304' (ALS #105) and 'QC305' (ALS #106) and have been placed on hold. If testing is required on these samples, please contact ALS Client Services at [REDACTED]**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 9
Report No. RN1365263

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.
LOR raised for FOUEA in sample N22/017414 due to low surrogate recovery

REPORT OF ANALYSIS

Page: 9 of 9
Report No. RN1365263

WORLD RECOGNISED
ACCREDITATION

Accredited for compliance with ISO/IEC 17025 - Testing.
This report shall not be reproduced except in full.
Results relate only to the sample(s) as received and tested.

This Report supersedes reports: *RN1365261*

Measurement Uncertainty is available upon request.

Note: Sampling date(s) have been provided by the client.

Chemical Accreditation 198: 105 Delhi Road, North Ryde, NSW, 2113

SAMPLE RECEIVED CONDITION

Date samples received: 5-SEP-2022

Sample received in good order: Yes

NMI Quotation no. provided: QLD_0229

Client purchase order number: 60612487_3_1

Temperature of samples: Chilled

Comments:

Mode of Delivery: Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work.

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at <https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2020) at Lavarack Barracks Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**. PFAS Source Areas are identified and defined in the PMAP (Department of Defence, 2020). The OMP (Department of Defence, 2020) for Lavarack Barracks includes biannual groundwater, surface water, and sediment sampling events in October 2020, March/April 2021, August 2021, February to April 2022, August to October 2022, and March 2023.

These sampling events were scheduled to include:

- Groundwater sampling of 29 on-Base wells at Lavarack Barracks and nine off-Base wells in the suburbs of Annandale, Idalia, and Wulguru.
- Sediment sampling at 18 on-Base locations at Lavarack Barracks and 13 off-Base locations in the Ross River and waterways in Annandale and Idalia with co-located surface water sampling when water is present.

A Sampling Analysis and Quality Plan (SAQP Rev 7, AECOM, 2023) was prepared to provide details of the sampling event. Where deviations from the SAQP (AECOM, 2023) occurred, these are noted in this report.

This sampling event factual report has been prepared to report the results of the 2023 Wet Season Sampling Event, which was completed from 6 to 15 March 2023. This report specifically highlights first-time detections and/or new exceedances of human health or ecological screening criteria for perfluorooctane sulfonate (PFOS), PFOS + perfluorohexane sulfonic acid (PFHxS) and / or perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objectives of the OMP program are to:

- Implement the OMP prepared as part of the PMAP.
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, and transport of PFAS at HMAS Cairns and the Former WWII RAN Fuel Installation.

The data collected as part of the scheduled sampling events will assist in the timely identification of risks and inform Defence's approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2023 wet season sampling event scope of works in accordance with the SAQP (AECOM, 2023).

2.0 Scope of Work

The sampling event at the Base was completed in general accordance with the SAQP (AECOM, 2023). In summary, the scope of works for this March 2023 Wet Season sampling event included:

- Review of the SAQP prior to the monitoring event to ensure compliance with relevant Australian guidance and suitable for the proposed sampling.
- Collection of 31 sediment (18 on-Base and 13 off-Base locations) and 29 co-located surface water samples (where water was present) (refer to **Figure 2** and **3, Appendix A**). Collection of groundwater samples at 38 locations including 29 on-Base and 9 off-Base locations.
- Collection of groundwater gauging data (at all 38 wells) and water quality parameter data for surface water and groundwater sample locations (where water was present).
- Analysis of all samples for the PFAS suite (28 analytes) at the standard laboratory limit of reporting (LOR).
- Collection of field duplicate and triplicate samples at a rate of 1 in 10 primary samples, one rinsate sample per fieldwork day, and one trip blank per batch analysed for PFAS suite (28 analytes).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report.

Refer tables below for nominated sampling locations as outlined in the SAQP (AECOM, 2023). Deviations from the SAQP are identified in **Section 3.7**.

Table 1 Planned Groundwater Sampling Locations

Source Area	Monitoring Well ID	Total wells
Eastern PFAS Contamination Area	MW018, MW114, MW115, MW116, MW139	5
Former B Squadron	MW135	1
Former Fire Station	MW105, MW128	2
Former Fire Training Area	MW131	1
Former Helicopter Squadron	MW102	1
Lavarack Golf Course and Sporting Fields	MW065, MW120, MW121, MW122, MW123I, MW123S	6
Monocell	MW072, MW074, MW106	3
Stockpile Designated Area 2	MW141	1
Suspected Aqueous Film Forming Foam (AFFF) Disposal Area	MW101	1
Top, Middle and Lower Dams	MW138	1
Base Boundary – On-Base	MW002, MW003, MW118, MW119, MW124, MW125I, MW125S	7
	Sub-total	29
Off-Base	MW205S, MW212, MW217, MW220S, MW226, MW232, MW233, MW235S, MW236S	9
	Total	38

Table 2 Planned Surface Water Sampling Locations

Source Area	Surface Water Location ID	Total
Eastern PFAS Contamination Area	SW119, SW121 [^]	2
Former Fire Station	SW109, SW110	2
Lavarack Golf Course & Sporting Field	SW129, SW130	2
Top, Middle and Lower Dams	SW139, SW140, SW144	3
Remaining on-Base	SW113, SW120 [#]	2
Base Boundary	SW126, SW128, SW132, SW133, SW134, SW135, SW136	7
Sub-total		18
Off-Base	SW203, SW205, SW211, SW212, SW217, SW220, SW227, SW232, SW233, SW242, SW243, SW244, SW245	13
Total		31

[#] Location was dry during wet season 2023 sampling event and therefore no sample collected at this location.

[^] Location was inaccessible for surface water sampling during wet season 2023 sampling event and therefore no sample collected at this location due to the presence of vegetation.

Table 3 Planned Sediment Sampling Locations

Source Area	Sediment Location ID	Total
Eastern PFAS Contamination Area	SD119, SD121	2
Former Fire Station	SD109, SD110	2
Lavarack Golf Course and Sporting Fields	SD129, SD130	2
Top, Middle and Lower Dams	SD139, SD140, SD144	3
Remaining on-Base	SD113, SD120	2
Base Boundary	SD126, SD128, SD132, SD133, SD134, SD135, SD136	7
Sub-total		18
Off-Base	SD203, SD205, SD211, SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245	13
Total		31

3.0 Methodology

The methodology used for the 2023 wet season sampling event was in general accordance with the SAQP (AECOM, 2023) and is summarised in **Sections 3.1-3.3**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	The depth to groundwater was measured in each monitoring well prior to the installation of HydraSleeves™ and immediately prior to collection of groundwater samples using an interface probe (IP).
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T1). Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	<p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T1, Appendix B).</p> <p>For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer.</p> <p>HydraSleeves™ were installed based on measured well depth. Review of the provided ESdat well screen interval information indicates that there are discrepancies between documented well screen interval and the actual well depth. Therefore, it appears that the HydraSleeves™ may have been installed outside of the documented screened interval. The SAQP will be amended to include provision for addition of a top weight for the HydraSleeve™ installed in shallow wells to enable the HydraSleeve™ to compress and be filled upon retrieval. This will enable a greater volume of water to be captured by the HydraSleeve™ and to ensure installation within the screened interval.</p> <p>Review of the data and previous results for MW101, MW102, MW106, MW124, MW125I, MW125S, MW205S indicates results are lower than or within the same order of magnitude and water is of similar or comparable condition to previous rounds and therefore considered to be representative of groundwater conditions at these locations.</p>

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity, dissolved oxygen, oxidation reduction potential, pH and observations of water quality were recorded using a calibrated water quality meter. Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected directly into laboratory supplied containers, from immediately below the water surface, to minimise collection of sediment or floating materials in the samples. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into new laboratory supplied containers at each sample location.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample.

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 7**, below.

Table 7 QA/QC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e., splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.

Item	Details
Sample Analysis	<p>All primary samples were submitted for PFAS suite analysis using the standard levels of detection.</p> <p>Australian Laboratory Services (ALS) Environmental Townsville, Queensland (QLD) was used as the primary laboratory. Eurofins Brisbane, QLD was used as the secondary laboratory. ALS and Eurofins methods for the required analyses are certified by the National Association of Testing Authorities (NATA).</p> <p>Chain of Custody Forms are presented in Appendix D. Laboratory certificates are presented in Appendix E.</p>

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, Heads of Environmental Protection Agencies (HEPA) (2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2023), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 8** below.

Table 8 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria as well as one surface water location (SW245) which is within Townsville's emergency drinking water supply.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

3.6 Data Quality Objectives and Data Validation

The data quality objectives (DQO) and data quality indicators (DQI) adopted for these works are presented in the SAQP (AECOM, 2023).

Data validation assessment is provided in **Appendix C**.

Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during March 2023 have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 9 lists the deviations from the SAQP (AECOM, 2023) during this sampling round.

Table 9 Deviations from the SAQP during 2023 Wet Season Sampling Event

SAQP Deviation	Comment/Justification	Impact on Dataset
Collection of surface water at SW120 and SW121	SW120 was noted as dry and couldn't be sampled. SW121 couldn't be sampled due to overgrown vegetation preventing access to water.	Minor – No data available at these locations for wet season 2023. The data set is considered representative of the conditions within the Management Area being monitored.
HydraSleeves™ installed within screened interval	HydraSleeves™ were installed based on measured well depth. Review of the provided ESdat well screen interval information indicates that there are discrepancies between documented well screen interval and the actual well depth. Therefore it appears that the HydraSleeves™ may have been installed outside of the documented screened interval. The SAQP will be amended to include provision for addition of a top weight to shallow wells.	Review of the data and previous results for MW101, MW102, MW106, MW124, MW125I, MW125S, MW205S indicates results are lower than or within the same order of magnitude and water is of similar or comparable condition to previous rounds and therefore considered to be representative of groundwater conditions at these locations.

4.0 Field Observations and Results

The 2023 wet season sampling event was completed between 6 and 15 March 2023.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 10**.

Table 10 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	<p>The Bureau of Meteorology (BOM) (BOM, 2023) reported the following monthly rainfall data leading up to and during the 2023 wet season sampling event at Bureau Station 032195 Mount Stuart (Defence):</p> <ul style="list-style-type: none"> October 2022: 80.8 mm November 2022: 147.0 mm December 2022: 120.6 mm January 2023: 502.2 mm February 2023: 301.0 mm March 2023: 134.2 mm <p>Weather was overcast and humid with some periods of sun mixed with some periods of heavy rain during the sampling program in March 2023. The conditions monitored were representative of wet season conditions within the Management Area.</p>
Estate Management Works or Training Activities	<p>Soil disturbance activities were identified at the following locations during the sampling event:</p> <ul style="list-style-type: none"> Revegetation and placement of mulch in the area east of the Ergon substation at Andrew Ball Drive. On the corner of Andrew Ball Drive and Gallipoli Drive comprising the stockpiling of soils at the southern end of the Middle Dam. <p>No other estate management works, or training exercises impacted access to sample groundwater, surface water and sediment locations.</p>

The results of the sampling event are summarised in **Sections 4.1-4.3**.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 11 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	All monitoring wells were observed to be in serviceable condition. MW115 has a bend in the casing approximately 0.75 metres below top of casing (mBTOC) however the well was able to be sampled.
Field Observations	<p>Groundwater from five monitoring wells (MW101, MW115, MW120, MW235S and MW236S) had an organic odour. A weak sulfurous odour was recorded during the sampling of monitoring well MW212.</p> <p>Groundwater colour was typically recorded as clear. Light yellow and yellow coloured groundwater was observed at MW105, MW128 and MW226. Light brown coloured groundwater was observed at MW065, MW072, MW118, MW123I, MW125I, MW135, MW139, MW205S, MW217, MW235S and MW236S. Light grey coloured groundwater was observed at MW115, MW120, MW121 and MW232.</p>

Item	Observations
	<p>Turbidity was typically recorded as low, with medium level turbidity observed at MW115, MW118, MW119, MW205S and MW233.</p> <p>No visible or olfactory indications of contamination were observed during the sampling round.</p> <p>Field observations are presented Table T1 in Appendix B.</p>
Depth to Groundwater	<p>Depth to groundwater ranged between 0.270 (MW232) and 5.125 (MW205S) mBTOC. It is noted that multiple groundwater systems are present across the Management Area. Groundwater elevations within the shallow (alluvial) aquifer were between 1.845 (MW232) and 25.507 (MW141) metres Australian Height Datum (mAHD). Groundwater elevations within the deeper (rock) aquifer were between 8.74 (MW115) and 19.175 (MW106) mAHD. Groundwater gauging data are presented in Table T1 in Appendix B.</p>
Groundwater Flow Direction	<p>Groundwater contours and inferred groundwater flow directions in March 2023 are shown on Figure 4 in Appendix A. The inferred local groundwater flow direction for the shallow aquifer is to the north-east, consistent with previous monitoring rounds. Monitoring wells which are in the deeper aquifer or tidally influenced have been removed from the contours as have wells MW074, MW226, MW105 and MW128 which were identified to have incorrect survey data.</p>
Water Quality Parameters	<p>Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T1 in Appendix B and are summarised below, covering all sampling completed:</p> <ul style="list-style-type: none"> • DO results ranged between 0.51 mg/L (MW235S) to 6.22 mg/L (MW128) indicating poorly to well oxygenated conditions across the Management Area. • EC ranged from 4.9 µS/cm (MW101) to 35,058 µS/cm (MW232) indicating fresh to saline conditions across the Management Area. • pH ranged from 6.24 (MW220S) to 7.89 (MW065). pH results generally indicated slightly acidic to slightly alkaline conditions across the Management Area. • ORP ranged from 52.5 mV (MW212) to 412.8 mV (MW138) indicating mildly to moderately reducing conditions. • Temperature ranged from 27.0 °C (MW138) to 32.7 °C (MW116). <p>These results are generally consistent with the groundwater quality parameters from the previous five groundwater monitoring rounds since dry season 2020.</p>

4.1.2 Groundwater Analytical Results

Of the 38 groundwater wells sampled during this event, 34 samples reported concentrations of PFAS at or above the laboratory LOR. PFAS was not detected in groundwater at wells MW003, MW124, MW212 and MW235S. The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**.

There were three first-time detections (PFOS and PFOS + PFHxS – MW233, PFOA – MW123I and MW106) and one new exceedance of the ecological guideline (PFOS – MW106) during the sampling. Four of the nine samples collected off-Base and a total of 26 on-Base and boundary samples, exceeded the adopted ecological guideline for PFOS. Four of the nine samples collected off-Base and a total of 26 on-Base and boundary samples exceeded the human health drinking water guideline for PFOS+PFHxS. No off-Base and a total of six on-Base samples exceeded the PFOA human health drinking water guideline. There were no on- or off-Base exceedances of the PFOA ecological guideline.

The following historical maximum concentrations were recorded during the March 2023 sampling round:

On-Base

- PFOS, PFOA, PFOS+PFHxS at MW114
- PFOS, PFOA, PFOS+PFHxS at MW131
- PFOS, PFOS+PFHxS at MW121
- PFOA, PFOS+PFHxS at MW123I
- PFOS, PFOA, PFOS+PFHxS at MW106
- PFOA, PFOS+PFHxS at MW138.

Off-Base

- PFOS and PFOS+PFHxS at MW233 which were detected for the first-time.

Historical groundwater results are presented in **Table T7, Appendix B**.

Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations.

4.2 Surface Water

4.2.1 Observations and Field Measurements

Table 12 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the March 2023 sampling event with the exception of the following which couldn't be sampled: <ul style="list-style-type: none"> • SW121 was inaccessible for collection of surface water only. • SW120 was dry.
Field Observations	<p>Surface water at SW232 exhibited a slight biological sheen on the surface.</p> <p>Surface water on-Base was observed to be generally clear. Light brown coloured surface water was observed at one on-Base location (SW134), and light brown, brown, light yellow and light olive/brown coloured surface water was observed at the majority of off-Base locations.</p> <p>No other visible or olfactory indications of contamination were observed during the sampling of the surface water locations.</p> <p>Field observations are presented Table T3 in Appendix B.</p>
Water Quality Parameters	<p>Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T3 in Appendix B and are summarised below:</p> <ul style="list-style-type: none"> • DO results ranged between 2.14 mg/L (SW220) and 9.35 mg/L (SW212) indicating moderately to well oxygenated conditions. • EC ranged from 3.1 µS/cm (SW134) 10,695 µS/cm (SW243) indicating relatively fresh conditions in urban runoff areas and saline conditions in areas with tidal connectivity. • pH ranged from 6.42 (SW220) to 8.88 (SW135). pH results generally indicated slightly acidic to slightly alkaline conditions. • ORP ranged from 180.9 mV (SW205) to 415.3 mV (SW110) indicating mildly to moderately reducing conditions. • Temperature ranged from 26.6°C (SW109) to 32.6°C (SW119).

4.2.2 PFAS Surface Water Analytical Results

Of the 29 surface water samples collected, 24 reported concentrations of PFAS above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**. There was one first-time detection of PFOA at SW133 and no new exceedances of PFOS, PFOA or sum of PFOS+PFHxS.

PFOS concentrations in 11 on-Base samples and four off-Base samples exceeded the adopted ecological guidelines for PFOS. Two on-Base samples exceeded the human health drinking water guideline for PFOA. Sum of PFOS+PFHxS concentrations in all 14 on-Base samples and nine off-Base samples exceeded the human health drinking water guideline and two on-Base samples exceeded the human health recreational guideline.

The following historical maximum concentrations were recorded during the March 2023 sampling round:

On-Base

- PFOS, PFOA and PFOS+PFHxS at SW110
- PFOA at SW129
- PFOS at SW144
- PFOS and PFOS+PFHxS at SW133.

Off-Base

- PFOS, PFOA and PFOS+PFHxS at SW203
- PFOS and PFOS+PFHxS at SW205
- PFOS+PFHxS at SW211
- PFOS+PFHxS at SW217
- PFOS+PFHxS at SW232
- PFOS, PFOA and PFOS+PFHxS at SW233
- PFOS and PFOS+PFHxS at SW242.

Historical surface water results are presented in **Table T8, Appendix B**.

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 13 Sediment Observations

Item	Observations
Access	During the March 2023 sampling event, sediment was collected at all 31 sampling locations.
Field Observations	No visible or olfactory indications of contamination were observed during the sampling of the sediment locations. Sediment logging and observation data are presented in Table T5, Appendix B .

4.3.2 PFAS Sediment Analytical Results

Of the 31 sediment samples collected, 17 on-Base and nine off-Base samples reported concentrations of PFAS above the laboratory LOR. There are no endorsed human health or ecological guideline values available for sediment. The PFAS sediment analytical results from this sampling event are presented in **Table T6** in **Appendix B**.

There were two first-time detections of PFOA at on-Base sediment locations (SD144 and SD128). There were no new exceedances PFOS, PFOA or sum of PFOS+PFHxS as there are currently no sediment guidelines for PFAS.

The following locations recorded historical maximum concentrations during the March 2023 sampling round:

On-Base

- PFOS and PFOS+PFHxS at SD121
- PFOS and PFOS+PFHxS at SD133
- PFOA and PFOS+PFHxS at SD139
- PFOA at SD144
- PFOS and PFOS+PFHxS at SD120
- PFOS, PFOA and PFOS+PFHxS at SD128.

Off-Base

- PFOS and PFOS+PFHxS at SD232.

Historical sediment results are presented in **Table T9, Appendix B**.

5.0 Summary and Next Sampling Event

5.1 Summary of Sampling Event

The routine OMP Wet Season Sampling Event was undertaken at the Base between 6 and 15 March 2023. This wet season sampling event included sampling from 38 groundwater monitoring locations, 29 surface water monitoring locations and 31 sediment monitoring locations.

Table 14 summarises the findings of the March 2023 sampling events and the recommended actions.

Table 14 Summary of Sampling Event

Item	Comment	Recommended Actions
<u>Access to sampling locations</u>	All groundwater monitoring wells, surface water and sediment locations were accessible during the dry season monitoring event, with the exception of SW121 which was unable to be accessed due to overgrown vegetation in the waterway limiting access for surface water sampling.	Ongoing monitoring in accordance with the OMP.
<u>Groundwater: Installation of HydraSleeves™</u>	HydraSleeves™ were installed outside of documented screened interval at for MW101, MW102, MW106, MW124, MW125I, MW125S, MW205S	SAQP will be amended to include provision for addition of a top weight to shallow wells.
<u>Surface Water:</u> Dry/insufficient water to sample	During the March 2023 sampling event, surface water was not present at one monitoring location, SW120.	Ongoing monitoring in accordance with the OMP. Review all sampling locations to assess constraints in matrix availability, with specific review of location SW120.
<u>Analytical Results</u>	PFAS were detected at or above the laboratory LOR in 34 of the 38 groundwater samples, 24 of the 29 surface water samples and 26 of the 31 sediment samples analysed.	Ongoing monitoring in accordance with the OMP.
<u>First-time detections and new exceedances.</u>	<u>Groundwater:</u> there were three first-time detections of PFOS, PFOS+PFHxS and PFOA and one new exceedance of the ecological guideline for PFOS. <u>Surface water:</u> there was one first-time detection of PFOA and no new exceedances. <u>Sediment:</u> there were two first time detections of PFOA and no new exceedances.	Ongoing monitoring in accordance with the OMP.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for August 2023.

5.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled for March 2024. The March 2023 event will be included in the upcoming ongoing monitoring interpretive report for the monitoring conducted between October 2020 and March 2023.

SW244	8/03/2023	4.49	150.4	7.6	32.9	226.9	30.3	Low	Clear	No odour	No sheen	Slow flow just above weir
SW245	8/03/2023	5.1	185.9	7.18	169.3	363.3	29.3	Low	Brown	No odour	No sheen	Slow flow just above weir

Table with columns for PFAS Full Suite (25 compounds) and rows for various locations and sample IDs. Includes LOR values and numerical data for each compound.

NS - No Sample - Surface water not present
LOR is limit of reporting
ug/L is micrograms per litre
< denotes concentration is less than
Heads of Environmental Protection Agencies (HEPA), (2020). PFAS National Environmental Management Plan (NEMP).
National Health and Medical Research Council (NHMRC), (2019). Guidance on PFAS in Recreational Water. August 2019.
*PFAS NEMP 2020 Drinking Water is used for SW245 only. This is the only sample location upstream of Blacks Weir in the Ross River, the backup drinking water source for the city of Townsville.
Denotes first time detection above LOR
Denotes new exceedance of guideline values

Table T5: Sediment Observation Results

Location ID	Date	Sample Description	Odour	Comment
Eastern PFAS Contamination Area				
SD119	10/03/2023	Sand, loose, brown/black, fine grained, subangular, moist	N	Some surface algae
SD121	6/03/2023	Silty CLAY, brown, med plasticity, with trace of sand	N	Plant roots and surface algae
Former Fire Station				
SD109	6/03/2023	SAND, brown, medium grained, poorly graded, wet	N	Nil
SD110	6/03/2023	Sandy CLAY, brown, low plasticity, firm, moist	N	Nil
Lavarack Golf Course & Sporting Field				
SD129	6/08/2023	CLAY, pale brown grey, low plasticity, wet	N	Low flow
SD130	8/03/2023	SAND, brown, medium grained, with gravel, wet, with algae	N	High organic content
Top, Middle and Lower Dams				
SD139	6/03/2023	Sandy CLAY, brown, low plasticity, firm, dry	N	Nil
SD140	6/03/2023	silty SAND, brown, medium grained, poorly graded, dry	N	High root content
SD144	10/03/2023	CLAY, soft, dark brown, low plasticity, fine grained, subrounded sand, moist	N	Some organic content (leaves)
Remaining On-Base				
SD113	9/03/2023	gravelly SAND, well graded with sub rounded gravel	N	Low organic matter
SD120	9/03/2023	gravelly SAND, well graded, medium grained, some medium angular to subangular gravel, brown to yellow	N	Minor organic material in sample
Base Boundary				
SD126	8/03/2023	SAND, yellow, medium grained, poorly graded, with trace subangular gravel, wet	N	Nil
SD128	9/03/2023	CLAY, grey, low plasticity, firm, wet	N	Organic content (roots), location was dry
SD132	6/03/2023	SAND, brown, medium to large grained, well graded, wet	N	Low organic content. Slow flow
SD133	8/03/2023	Sandy CLAY, brown, low plasticity, wet	N	Nil
SD134	8/03/2023	Silty SAND, brown, medium grained, wet	N	Low organic content
SD135	6/03/2023	SAND, brown yellow, medium grained, poorly graded, wet	N	Nil
SD136	6/03/2023	SAND, yellow brown, medium grained, poorly graded, wet	N	Nil
Off-Base				
SD203	8/03/2023	SAND, loose, light brown, medium grained, wet	N	Nil
SD205	9/03/2023	CLAY, loose, grey, small fine gravel, low plasticity	N	Low organic matter
SD211	9/03/2023	gravelly CLAY, brown, low plasticity, firm. Wet	N	No flow
SD212	9/03/2023	SAND, yellow, fine grained sand, poorly graded, wet	N	Low flow
SD217	8/03/2023	sandy CLAY, firm, dark brown to black, fine grained sand, wet	N	Organic content (roots and leaves)
SD220	9/03/2023	CLAY, grey, high plasticity, wet	N	Low organic matter, low flow
SD227	8/03/2023	CLAY, fine, brown, small amounts of gravel and sand	N	Nil
SD232	9/03/2023	CLAY, loose, grey, low plasticity, medium sized gravel	N	Some organic content
SD233	15/03/2023	SAND, loose to medium dense, brown, fine to medium grained, subangular, with clay	N	Organic content (tree and grass roots)
SD242	9/03/2023	CLAY, light grey, fine sand, high plasticity	N	Nil
SD243	9/03/2023	CLAY, firm, dark grey, medium fine sand/gravel	N	Low organic matter
SD244	8/03/2023	gravelly SAND, loose, brown, fine to medium gravel/sand	N	Nil
SD245	8/03/2023	CLAY, brown, firm, wet	N	High organic content

Table T8: Historical Surface Water PFAS Analytical Results

Table with columns for chemical species (4:2 FTS, 6:2 FTS, etc.), units, and concentration values. Includes sections for NHMRC (2019) PFAS Recreational Water, Eastern PFAS Contamination Area, Former Fire Station, Lavarack Golf Course and Sporting Fields, and Top, Middle and Lower Dams.

Table T8: Historical Surface Water PFAS Analytical Results

Summary table with columns for various PFAS compounds (4:2 FTS, 6:2 FTS, etc.) and rows for NHMRC (2019) PFAS Recreational Water, PFAS NEMP 2020 Drinking Water* (HEPA, 2020), and PFAS NEMP 2020 Interim Marine 95% (HEPA, 2020).

Main data table with columns for Location ID, Sample Date, and 28 PFAS compounds. Rows are grouped by location (SW 203, SW 205, SW 211, SW 212, SW 217, SW 220, SW 227) and include specific sampling dates and corresponding concentration values.

Table T9: Historical Sediment PFAS Analytical Results

Table with 30 columns for chemical species (4:2 FTS, 6:2 FTS, etc.) and 2 columns for Sum of PFHxS and PFOS, and Sum of PFAS. Includes a 'Units' row (mg/kg) and a 'LOR' row (0.0005).

Main data table with columns for Location ID, Sample Date, and 30 chemical species. Rows are grouped by location ID (SD212, SD217, SD220, SD227, SD232, SD233, SD242, SD243, SD244, SD245) and include sample dates from 2018 to 2023.

Appendix C

Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	██████	Date:	19/4/2023
Client:	Department of Defence				
Site:	Lavarack Barracks (0229)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	██████	Date:	3/05/2023
No. of primary samples:	38 groundwater, 29 surface water, 32 sediment.				
Laboratory:	ALS (Townsville), Eurofins (Brisbane)	Project Manager:	██████		
Lab reference:	ET2301427, ET2301428, ET2301429, ET2301455, 972979				
Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.				
Field QA/QC					
Sampling personnel	Sampling was conducted by AECOM personnel from 6 March to 15 March 2023.				
Sampling Methodology	Groundwater, surface water and sediment samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection. Surface water samples were collected from immediately below the water surface. Sediment samples were collected from within the water body, where possible.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (nine in total). Rinsate blanks were collected for each sample matrix from equipment including an interface probe, surface water sampling cup and trowel. Concentrations of all analytes tested were reported below the LOR for rinsate samples.				
Trip blanks	Trip blanks were not included in the samples sent to the laboratory. This was an oversight of the sampling team.				
Eskies to Laboratory	A total of eight eskies of samples in four deliveries were submitted to ALS and one esky was submitted to Eurofins across the March 2023 sampling event.				
Frequency of field QC	Field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) at the following frequencies: <ul style="list-style-type: none"> • Four duplicates and four triplicates for groundwater (10.5%) • Four duplicates and four triplicate for surface water (13%) • Four duplicates and four triplicate for sediment (12.5%) <p>The target frequency of 10% for field duplicates and triplicates was achieved for all groundwater, surface water and sediment samples collected in this program. The reported frequency of field QC reporting is considered suitable for the purpose of this assessment.</p>				
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 3.0°C and 12.1°C with ice present or attempt to chill the samples notes been made. All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.				

Equipment Calibration	Calibration of the water quality meter was conducted by the equipment hire company and at the beginning of each sampling day, see Appendix F .
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Townsville) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the Eurofins (Brisbane), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none"> • Laboratory duplicates for PFAS in water were below the expected rate of 10% in ET2301455 (at 7.14%). • Matrix spikes for PFAS in water were below the expected rate of 5% in ET2301455 (3.57%). <p>Sufficient additional sample was provided to the laboratory to enable the analysis. The additional sample volume was not assigned by the laboratory system. AECOM are working with the laboratory to amend this issue going forwards.</p>
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples analysed.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits.
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none"> • ET2301429: 0229_MW114_2300309 – Perfluorohexane sulfonic acid (PFHxS) and Perfluorohexanoic acid (PFHxA) (reported MS spike recovery not determined, background level greater than or equal to 4 x spike level). • ET2301455: Anonymous Sample – Perfluorooctane sulfonic acid (PFOS) (reported MS spike recovery not determined, background level greater than or equal to 4 x spike level).
Surrogate spike recovery	Laboratory surrogate spike recoveries were reported to all be within control limits.

QA/QC Field Data Evaluation

Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.
Field duplicate RPDs	<p>Field duplicate RPDs were reported within control limits except (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none">• PFOS in 0229_SD129_230306 and 0229_QC153_230306. <p>The reported concentrations for the primary/field duplicate samples were within the same order of magnitude. The variability between the primary and duplicate results is inferred to be the result of the heterogenous nature of the sediment sampled.</p>
Field triplicate RPDs	<p>Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none">• Sum of PFOS and PFHxS and PFOS in 0229_SD233_230315 and 0229_QC207_230315.• PFBS and PFPeS in 0229_SW110_230315 and 0229_QC206_230315.• Sum of PFAS in 0229_SW129_230306 and 0229_QC252_230306. <p>The reported concentrations of the primary/field triplicate samples were within the same order of magnitude. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.</p>

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
 **High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))
 ***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories.
 Any methods in the row header relate to those used in the primary laboratory

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

No. of samples received / analysed : 4 / 4

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
*Samples were originally received by ALS Townsville on 14/03/2023 and have been forwarded to ALS Brisbane for analysis.
Temperature on arrival in ALS Brisbane has been noted above.
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Contact : [REDACTED]
Address : [REDACTED]

Telephone : [REDACTED]
Date Samples Received : 15-Mar-2023 08:30
Date Analysis Commenced : 15-Mar-2023
Issue Date : 22-Mar-2023 16:43

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
*Samples were originally received by ALS Townsville on 14/03/2023 and have been forwarded to ALS Brisbane for analysis.
Temperature on arrival in ALS Brisbane has been noted above.
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order : **ET2301429**
Client : [REDACTED]
Contact : [REDACTED]
Address : [REDACTED]

Telephone : ----
Project : QLD_0229_PFASOMP_23
Order number : 60612487 task 3.1
C-O-C number : 49308
Sampler : [REDACTED]
Site : QLD_0229
Quote number : TV/007/21 v2 - Compass
No. of samples received : 109
No. of samples analysed : 107

Page : 1 of 49
Laboratory : [REDACTED]
Contact : [REDACTED]
Address : [REDACTED]

Telephone : [REDACTED]
Date Samples Received : 14-Mar-2023 09:15
Date Analysis Commenced : 15-Mar-2023
Issue Date : 28-Mar-2023 18:28

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Sample '0229_SD109_230306' required dilution due to the presence of high level contaminants. Surrogate recovery not determined and LOR values have been adjusted accordingly.
- EP231X PFAS: Sample "0229_SD140_230306" required dilution prior to analysis due to matrix interferences. LOR values have been adjusted accordingly.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X-ST PFAS Super Trace: Whole bottle extraction was not possible for samples 0229_MW235S_230308 (ET2301429-041) & 0229_MW123S_230308 (ET2301429-049). Samples required dilution due matrix interference (High Sediment). LOR values have been adjusted accordingly.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ET2301429	Page	: 1 of 19
Client	: [REDACTED]	Laboratory	: [REDACTED]
Contact	: [REDACTED]	Telephone	: [REDACTED]
Project	: QLD_0229_PFASOMP_23	Date Samples Received	: 14-Mar-2023
Site	: QLD_0229	Issue Date	: 28-Mar-2023
Sampler	: [REDACTED]	No. of samples received	: 109
Order number	: 60612487 task 3.1	No. of samples analysed	: 107

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: WATER

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2301429--082	0229_MW114_230309	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231B: Perfluoroalkyl Carboxylic Acids	ET2301429--082	0229_MW114_230309	Perfluorohexanoic acid (PFHxA)	307-24-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: SOIL

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	4	33	12.12	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	33	12.12	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	33	6.06	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	33	6.06	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	33	6.06	5.00	✔	NEPM 2013 B3 & ALS QC Standard

Matrix: WATER

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Client Requested Due Date	:	28-Mar-2023	Scheduled Reporting Date	:	28-Mar-2023

Delivery Details

Mode of Delivery	:	Carrier	Security Seal	:	Intact.
No. of coolers/boxes	:	4	Temperature	:	4.8°C, 3.0°C, 3.2°C, 3.1°C. - Ice present
Receipt Detail	:	MEDIUM ESKY	No. of samples received / analysed	:	109 / 107

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- **Please be advised, Extra PFAS Soil container received labelled "0229_SD233_230306" has been added to this work order (ALS #110). ALS has assigned analysis as per other the other soil samples in this Workorder. If this is incorrect or for more information, please contact Client Services at ALSEnviro.Brisbane@alsglobal.com.**
- **SRN Reissued 21/03/2023: as per the email received from [REDACTED] (17/03/2023), the results for ET2301429-086 & 110 will not be reported on the COA.*
- **Samples were originally received by ALS Townsville on 14/03/2023 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.*
- **Please be advised that sample "0229_QC104_230309" (ALS # 84) was not received at the laboratory (denoted SNR on the scanned COC). ALS has removed this sample from the workorder. This sample appears to be a duplicate of sample "0229_QC104_230309" (ALS #86).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ET2301429-004 : 06-Mar-2023 15:38 : 0229_SW132_230306 - Surface water

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order : **ET2301455**
Client : [REDACTED]
Contact : [REDACTED]
Address : [REDACTED]

Telephone : [REDACTED]
Project : QLD_0229_PFASOMP_23
Order number : 60612487 task 3.1
C-O-C number : 49674
Sampler : [REDACTED]
Site : QLD_0229
Quote number : TV/007/21 v2 - Compass
No. of samples received : 7
No. of samples analysed : 7

Page : 1 of 7
Laboratory : [REDACTED]
Contact : [REDACTED]
Address : [REDACTED]

Telephone : + [REDACTED]
Date Samples Received : 16-Mar-2023 12:52
Date Analysis Commenced : 17-Mar-2023
Issue Date : 27-Mar-2023 12:12

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: Whole bottle extraction was not possible for samples "0229_SW110_230315" & "0229_QC106_230315". Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly. The LOR of PFNA for sample "0229_SW110_230315" has been further raised due to matrix interference.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Sub-Matrix: SOIL (Matrix: SOIL)		Sample ID		0229_SD233_230315	0229_QC107_230315	----	----	----

Sampler : [REDACTED]
Site : QLD_0229
Quote number : TV/007/21 v2 - Compass
No. of samples received : 7
No. of samples analysed : 7

Telephone : [REDACTED]
Date Samples Received : 16-Mar-2023
Date Analysis Commenced : 17-Mar-2023
Issue Date : 27-Mar-2023

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2307486--004	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	28	7.14	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	28	3.57	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	1	8	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Receipt Detail : MEDIUM ESKY

Security Seal : Intact.
Temperature : 12.1°C - Ice present
No. of samples received / analysed : 7 / 7

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- *Samples were originally received by ALS Townsville on 15/03/2023 and have been forwarded to ALS Brisbane for analysis. Temperature on arrival in ALS Brisbane has been noted above.
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

- Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
- All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
- All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
- Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
- Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
- SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
- Samples were analysed on an 'as received' basis.
- Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
- This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	mg/L: milligrams per litre	µg/L: micrograms per litre
ppm: parts per million	ppb: parts per billion	%: Percentage
org/100 mL: Organisms per 100 millilitres	NTU: Nephelometric Turbidity Units	MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit		

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (<i>bis</i> -tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

- Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
- Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
- pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
- Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
- For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
- Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1		Acceptance Limits	Pass Limits	Qualifying Code
Method Blank						
Perfluoroalkyl carboxylic acids (PFCAs)

Comments**Sample Integrity**

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	N/A
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

- Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
- All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
- All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
- Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
- Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
- SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
- Samples were analysed on an 'as received' basis.
- Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
- This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

µg/L: micrograms per litre

ppm: parts per million

ppb: parts per billion

%: Percentage

org/100 mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100 mL: Most Probable Number of organisms per 100 millilitres

CFU: Colony forming unit

Terms

APHA	American Public Health Association
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
TBTO	Tributyltin oxide (<i>bis</i> -tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment however free tributyltin was measured and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 5.4
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

QC Data General Comments

- Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
- Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
- pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
- Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
- For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
- Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1		Acceptance Limits	Pass Limits	Qualifying Code
Method Blank

Comments**Sample Integrity**

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	N/A
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q09	The Surrogate recovery is outside of the recommended acceptance criteria due to matrix interference. Acceptance criteria were met for all other QC

Sample Receipt Advice

Company name:	[REDACTED]
Contact name:	[REDACTED]
Project name:	QLD_0229
Project ID:	QLD_0229_PFSOMP_23
Turnaround time:	5 Day
Date/Time received	Mar 17, 2023 2:35 PM
Eurofins reference	972979

Sample Information

- ✓ A detailed list of analytes logged into our LIMS, is included in the attached summary table.
- ✓ All samples have been received as described on the above COC.
- ✓ COC has been completed correctly.
- ✓ Attempt to chill was evident.
- ✓ Appropriately preserved sample containers have been used.
- ✓ All samples were received in good condition.
- ✓ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
- ✓ Appropriate sample containers have been used.
- N/A** Sample containers for volatile analysis received with zero headspace.
- ✗ Split sample sent to requested external lab.
- ✗ Some samples have been subcontracted.
- N/A** Custody Seals intact (if used).

Notes

Sample ID 0229_QC206 as per COC is labelled as 0229_QC205 on sample container.

Contact

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PFAS OMP	Project Number:	606 12487
Project Location:	LAVALACK TSU	Client:	DEFENCE
PM Name:	[REDACTED]	Fieldwork Staff Name:	[REDACTED]

This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldwork.

INSTRUMENT DETAILS

Supplier:	AIRMET
Make and Model:	YSI PROFESSIONAL
Serial Number:	18 J104 327

CALIBRATION

CALIBRATE WITH CALIBRATION SOLUTIONS

Date and Time:	06 MAR 23 0742				
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH 7	pH 4	µS/cm	(MV) ppm ORP	ppm %O
Calibration Standard Concentration:	7	4	2796	240	100
Calibration Reading:	7.22	4.14	2649	241	94.9
Calibration Temperature:	10.1°	10.8°	20.2°	19	21.1

ONGOING CHECKS

BUMP TEST WITH CALIBRATION SOLUTION

Date and Time:					
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH	pH	µS/cm	ppm	ppm
Calibration Standard Concentration:					
Bump Test Reading:					
Bump Test Temperature:					

COMMENTS

Detail any equipment faults, minor maintenance performed, change of batteries or technical support provided.

Approval and Distribution

Each individual instrument inspected and calibrated daily and bump tested as required by fieldwork staff.

 Staff Signature 06 MAR 23 Date

Distribution: Project Central File
