<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work.

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation.

NMI Terms and Conditions are available on the web at

<https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

REPORT OF ANALYSIS

Page: 3 of 9
Report No. RN1341907

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
High PFAS surrogate recoveries accepted - results corrected for recovery.

Organics - NSW
Accreditation No. 198

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Defence, 2020) at RAAF Base Townsville (the 'Base') located in the North Queensland Region. The location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**. The Monitoring Area includes areas on-Base and off-Base.

The OMP for Townsville (Defence, 2019a) includes the following sampling events:

- Biannual groundwater, surface water, and sediment sampling events in April and October 2020, 2021, and 2022; and
- Rainfall event-based sampling in response to 50 mm of rainfall recorded at Townsville Aero by the Bureau of Meteorology (BoM) (2022) or 100 mm of cumulative rainfall over a 7-day period including:
 - Surface water sampling at 19 locations, daily for a period of five consecutive days, limited to one event per calendar year.

A sampling and analysis quality plan (SAQP, AECOM, 2022) provides details of the sampling events.

This sampling event factual report has been prepared to report the results of the 2022 Wet Season Sampling Event, which was completed between April and May 2022. This report specifically highlights first-time detections and/or first-time exceedances of human health screening criteria for perfluorohexane sulfonic acid (PFHxS) + perfluorooctane sulfonate (PFOS) and / or perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance, v0.2*, May 2021 (Department of Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2022 Wet Season Sampling Event scope of works in accordance with the SAQP (AECOM, 2022).

2.0 Scope of Work

The sampling event at the Base was completed in general accordance with the SAQP (AECOM, 2022). In summary, the scope of works for this sampling event included:

- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP), version 2.0 (HEPA, 2020)
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013)
 - Defence Routine Environment Water Quality Monitoring Manual (Defence, 2019b)
 - AS/NZ 5667:1998 Water quality – Sampling
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, 2018)
 - Relevant State regulatory guidelines.
- Obtaining permission to work in public spaces where some groundwater sampling locations are situated.
- Concurrent gauging of 26 groundwater monitoring wells across a single day to enable groundwater contour generation (refer to **Table T1** in **Appendix B**).
- Collection of groundwater samples at 109 locations including 63 on-Base locations, and 47 off-Base locations (refer to **Table 1** below, and **Figure 2** in **Appendix A**). Standing water level (SWL) was measured in all wells immediately prior to sampling. It is noted that a groundwater sample from one monitoring well (MW253) could not be collected during this sampling event (refer to **Section 3.7** for details).
- Collection of co-located surface water and sediment samples at 42 locations including 15 on-Base and 27 off-Base locations (refer to **Table 2** and **Table 3** below, and **Figure 2** in **Appendix A**).
- Analysis of all samples for the PFAS suite (28 analytes) at the standard limit of reporting (LOR).
- Collection of field duplicate and triplicate samples at a rate of 1 in 10 primary samples to be analysed for PFAS suite, one rinsate sample per fieldwork day, and one trip blank per batch.
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Wet Season Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Source Area	Monitoring Well ID
Sub-Management Area 1 – includes a Former Fire Training Area.	MW013, MW116, MW118, MW126, MW129
Sub-Management Area 2 – includes a Former Fire Training Area, Fire Station and Fuel Farm.	MW005, MW015, MW016, MW021, MW046, MW054, MW055, MW081, MW090, MW109, MW110, MW138, MW139, MW246, MW250, MW251
Sub-Management Area 3 – includes 5th Aviation Regiment Precinct.	MW009, MW038, MW043, MW114, MW125, MW142, MW247, MW248
Northern section of Base, downgradient of Sub-Management Area 2	MW136, MW140, MW243, MW244
North west of Runway 07/25	MW112
East and south east of Sub-Management Area 1	MW026, MW033, MW034, MW061, MW063, MW120, MW222, MW223, MW224, MW232
South of Ingham Road – External Defence Properties (ID 0875, 1273, 1274)	MW226, MW227, MW229, MW228
Balance of Base area	MW002, MW004, MW056, MW057, MW122, MW135, MW235, MW234, MW241, MW242, MW245, MW255, MW265, MW300, MW470
Off-Base – Townsville Town Common, north of the Base	MW201, MW202, MW203, MW204, MW205, MW206, MW207, MW208
Off-Base – Bohle River and Bohle Industrial Estate, west of the Base	MW231, MW237, MW238, MW239, MW240, MW254, MW262
Off-Base – Suburb of Pallarenda, north east of the Base	MW233, MW252, MW253, MW301
Off-Base – Suburbs of Rowes Bay and Belgian Gardens, east of the Base	MW211, MW212, MW213, MW214, MW215, MW216, MW256, MW261, MW264, MW471, MW467
Off-Base – Suburb of Garbutt, east and south of the Base	MW217, MW218, MW219, MW220, MW221, MW225, MW236, MW257, MW258, MW259, MW260, MW263, MW266, MW267, MW268, MW269, MW270

Table 2 Surface Water Sampling Locations

Locations	Surface Water Location ID	
On-Base	Mundy Creek Catchment	SW001, SW010, SW106, SW121, SW132
	Bohle River / Louisa Creek / Townsville Town Common	SW013, SW014, SW016, SW019, SW112, SW123, SW125, SW126, SW131
	Three Mile Creek Catchment	SW102
Off-Base	Mundy Creek Catchment	SW108, SW109, SW113, SW114, SW115, SW116, SW117, SW118, SW119, SW208, SW209
	Bohle River / Louisa Creek / Townsville Town Common	SW017, SW021, SW110, SW111, SW120, SW127, SW129, SW201, SW202, SW203, SW204, SW205, SW206, SW207,
	Three Mile Creek Catchment	SW107, SW210

Table 3 Sediment Sampling Locations

Locations		Sediment Location ID
On-Base	Mundy Creek Catchment	SD001, SD010, SD106, SD121, SD132
	Bohle River / Louisa Creek / Townsville Town Common	SD013, SD014, SD016, SD019, SD112, SD123, SD125, SD126, SD131
	Three Mile Creek Catchment	SD102
Off-Base	Mundy Creek Catchment	SD108, SD109, SD113, SD114, SD115, SD116, SD117, SD118, SD119, SD208, SD209
	Bohle River / Louisa Creek / Townsville Town Common	SD017, SD021, SD110, SD111, SD120, SD127, SD129, SD201, SD202, SD203, SD204, SD205, SD206, SD207
	Three Mile Creek Catchment	SD107, SD210

3.0 Methodology

The methodology used for 2022 Wet Season Sampling Event was in general accordance with the SAQP (AECOM, 2022) and is summarised in **Sections 3.1-3.3**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	An initial gauging round of 26 monitoring wells using an interface probe was undertaken to enable groundwater contour generation (results detailed in Table T1, Appendix B). The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T2, Appendix B). Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T2, Appendix B). For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. Once sampling was completed, new HydraSleeves™ were deployed in preparation for the next sampling round, with the exception of those wells noted in Table T2, Appendix B .

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T4, Appendix B). Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T6, Appendix B .

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 7**, below.

Table 7 QAQC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. Australian Laboratory Services (ALS) Environmental Pty Ltd Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA). Chain of custody forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, version 2.0 (HEPA 2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017 [updated September 2019].
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*. August 2019 (NHMRC 2019).
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2022), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 8** below.

Table 8 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

There are no endorsed human health or ecological guideline values available for sediment.

3.6 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2022). Data validation assessment is provided in **Appendix C**. Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 9 lists the deviations from the SAQP (AECOM, 2022) during this sampling round.

Table 9 Deviations from the SAQP during 2022 Wet Season Sampling Event

SAQP	2022 Wet Season Sampling Event	Impact of Deviation
Damage to MW253	Monument was broken and the well was unable to be gauged and sampled due to the damage.	Minimal impact – location was last sampled on 12 October 2021 and will be sampled again in the dry season of 2022. There are also two other wells in Pallarenda to provide coverage of the area that were sampled as part of the April groundwater monitoring round.
Sampling to be completed in April 2022	Sampling of the Bohle River catchment by boat completed in the first week of May due to more favourable tidal conditions and availability of subcontractors.	Minimal impact. Sampling completed during favourable tidal conditions (for a neep tide) and availability of subcontractor to operate vessel. Sampling was previously also completed in May 2019 with minimal impact to the OMP sampling.

4.0 Field Observations and Results

The 2022 Wet Season Sampling Event was completed between 11 April and 5 May 2022. Groundwater gauging and deployment of HydraSleeves™ was conducted at the beginning of the sampling round.

The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 10**.

Table 10 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	Weather was warm and sunny during the sampling program in April and May 2022.
Estate Management Works or Training Activities	No active remediation was underway during the sampling program.

The results of the sampling event are summarised in **Sections 4.1-0**.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 11 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	The headworks at one monitoring well, MW253 was damaged during the 2022 wet season sampling event and was unable to be sampled. The monument requires replacement.
Field Observations	Groundwater from six monitoring well locations (MW013, MW138, MW203, MW226, MW244 and MW268) had a sulphurous odour. Organic odours were recorded during the sampling of monitoring wells MW118, MW129, MW140, MW206, MW221, MW267 and MW301. Groundwater colour was typically recorded as turbid light brown/yellow, to clear/low turbidity. No visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells. Field observations are presented Table T2, Appendix B .
Depth to Groundwater	For the entire April dataset, depth to groundwater ranged between 0.646 (MW002) and 7.898 (MW261) metres below top of casing (mBTOC). Groundwater elevations were between -0.747 (MW046) and 8.60 metres Australian Height Datum (mAHD) (MW261). These groundwater gauging data are presented in Table T2, Appendix B . For the gauging event on 12 April 2022 (presented in Table T1, Appendix B), depth to groundwater ranged between 0.646 (MW002) and 2.918 mbtoc (MW239). Groundwater elevations were between 0.734 (MW215) and 4.036 (MW223).
Groundwater Flow Direction	Groundwater contours and inferred groundwater flow directions for the gauging event on 12 April 2022 are shown on Figure 4 in Appendix A . In the central and western portions of the base the inferred local groundwater flow direction is to the north-west. In the east and northeast portion of the base, the inferred groundwater flow is to the north-east towards Rows Bay.

Item	Observations
	It is noted that groundwater elevation data collected from the Townsville Town Common and Cape Pallarenda was likely influenced by the pooled surface waters in the Townsville Town Common at the time of gauging. For this reason, groundwater elevation data from the Townsville Town Common and Cape Pallarenda was not considered when generating the groundwater contours.
Water Quality Parameters	<p>Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T2, Appendix B and are summarised below, covering all sampling completed:</p> <ul style="list-style-type: none"> • DO results ranged between 0.86 mg/L (MW140) to 7.45 mg/L (MW301) indicating poorly to well oxygenated conditions. • EC ranged from 10.4 µS/cm (MW301) to 133,650 µS/cm (MW203) indicating fresh to saline conditions. • pH ranged from 3.47 (MW206) to 8.18 (MW090). pH results generally indicated acidic to slightly alkaline conditions. • ORP ranged from -181 mV (MW211) to 238.6 mV (MW206) indicating moderately to strongly reducing conditions. • Temperature ranged from 26.3°C (MW470) to 33.4°C (MW216).

4.1.2 Groundwater Analytical Results

Of the 109 groundwater wells sampled during this event, 93 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T3, Appendix B**. 22 of the 47 groundwater samples collected from off-site monitoring wells exceeded the drinking water guideline for PFOS+PFHxS.

Eight exceedances of the ecological guideline for PFOS were observed in off-Base wells (MW216, MW218, MW221, MW225, MW240, MW263, MW267 and MW301). A total of 48 on-Base samples exceeded the ecological guideline for PFOS, and one on-Base sample exceeded the ecological guideline for PFOA.

Historical groundwater results are presented in **Table T8, Appendix B**. There were no first-time detections of PFOS, PFOA or PFHxS in any samples during this sampling event.

There were no first-time exceedances of the human health or ecological guidelines during the sampling. Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations.

4.2 Surface Water

4.2.1 Observations and Field Measurements

Table 12 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event.
Field Observations	<p>Surface water at SW110, SW114 and SW202 to SW207 had organic odours. Surface water at SW117 and SW131 had sulfurous odours.</p> <p>Surface water at SW131 had a slight biological sheen on the surface. High algal load was noted in surface water at SW119. Biological material was noted floating in the water at SW111.</p> <p>No other visible or olfactory indications of note were observed during the sampling of the surface water locations.</p> <p>Field observations are presented Table T4 in Appendix B.</p>

Item	Observations
Water Quality Parameters	<p>Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T4, Appendix B and are summarised below:</p> <ul style="list-style-type: none"> • DO results ranged between 1.57 mg/L (SW013) and 13.16 (SW119) indicating moderately to well oxygenated conditions. • EC ranged from 186.8 $\mu\text{S}/\text{cm}$ (SW019) to 100,174 $\mu\text{S}/\text{cm}$ (SW108) fresh to saline conditions. • pH ranged from 6.56 (SW202) to 10.12 (SW119). pH results indicated near neutral to alkaline conditions. • ORP ranged from -60.9 mV (SW017) to 203.6 mV (SW202) indicating moderately to strongly reducing conditions. • Temperature ranged from 23.1°C (SW013) to 34.6°C (SW107).

4.2.2 PFAS Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T5, Appendix B**. PFAS was detected in 40 of the 42 samples collected. PFOS concentrations in 30 samples exceeded the adopted ecological guidelines for PFOS. No samples exceeded the ecological guideline for PFOA. Sum of PFOS+PFHxS concentrations in eight on-Base samples and seven off-Base samples exceeded the adopted recreational use guidelines (**Table T5, Appendix B**).

Historical surface water results are presented in **Table T9, Appendix B** and were all generally reported within the historical range of concentrations, except the following:

- SW102 which recorded a new historical maximum concentration of 1.7 $\mu\text{g}/\text{L}$, previously 1.19 $\mu\text{g}/\text{L}$;
- SW206 which recorded a new historical maximum concentration of 0.84 $\mu\text{g}/\text{L}$, previously 0.34 $\mu\text{g}/\text{L}$; and
- SW207 which recorded a new historical maximum concentration of 0.55 $\mu\text{g}/\text{L}$, previously 0.21 $\mu\text{g}/\text{L}$.

There were two first-time exceedances of the ecological guidelines for PFOS during the sampling event (SW203 and SW204) and no first-time exceedances of the human health guidelines. Refer **Figure 5, Appendix A** for the locations of SW203 and SW204.

Table 13 First-time exceedances of PFOS or PFOA in surface water

First time detection / exceedance	Surface water Sampling location	PFOS concentration ($\mu\text{g}/\text{L}$)		PFOA concentration ($\mu\text{g}/\text{L}$)	
		April 2022	Historical maximum	April 2022	Historical maximum
First time exceedances of PFOS, PFHxS+PFOS or PFOA in surface water	SW203	0.68	0.03	0.01	0.01
	SW204	0.24	0.04	<0.01	0.0007

Note: Yellow shading indicates a sample with a first-time exceedance above ecological guideline values (refer to 3.5).

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 14 Sediment Observations

Item	Observations
Access	All sediment sampling locations were accessible.
Field Observations	No visible or olfactory indications of contamination were observed during the sampling of sediment locations. Organic odours were detected at sample locations SD107, SD108, SD110, SD111, SD116, SD131 and SD201-SD208. Sulfurous odours were detected at sample locations SD117 and SD118. Sediment logging and observation data are presented in Table T6, Appendix B .

4.3.2 PFAS Sediment Analytical Results

Of the 42 sediment samples collected, 38 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T7, Appendix B**.

Historical sediment results presented in **Table T10, Appendix B**. There were no first-time detections of PFOA or PFOS+PFHxS in sediment. Sediment sampling results were generally within the historical range of concentrations.

There are no endorsed human health or ecological guideline values available for sediment.

5.0 Summary and Next Sampling Event

5.1 Summary of Sampling Event

The routine OMP Wet Season Sampling Event was undertaken between 11 April and 5 May 2022 and included sampling from 109 groundwater monitoring locations and 42 co-located surface water and sediment monitoring locations.

Table 15 summarises the findings of the sampling event and the recommended actions.

Table 15 Summary of Sampling Event

Item	Comment	Recommended Actions
<u>Groundwater:</u> Access to sampling locations	Damage to monitoring well MW253 prevented sampling during this monitoring round.	Repairs to the monitoring well monument have been raised as an Early Warning Notice.
<u>Analytical Results</u>	PFAS compounds were detected above laboratory LOR in 92 of the 109 groundwater samples, 40 of the 42 surface water samples and 38 of the 42 sediment samples analysed.	Ongoing monitoring in accordance with the OMP.
<u>First-time detections and exceedances of PFOS</u>	There were no first-time detections of PFOS, PFOA or PFHxS, and two (SW202 and SW203) first-time exceedances for PFOS of the 95% species protection ecological guidelines (HEPA, 2020). There were no first-time exceedances of the NHMRC (2019) recreational use guidelines or drinking water guidelines (for off-Base samples only).	Ongoing monitoring in accordance with the OMP.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for October 2022.

5.3 Upcoming Annual Interpretive Report

The next annual interpretative report is scheduled for January 2023.

NA - Well construction details are not available in ESdat for some wells
 mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Redox - Reduction Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre
 µS/cm - microsiemens per centimetre
 mV - millivolt
 °C - degrees Celcius
 "-" denotes no data collected

Property ID	Location ID	Sample Date	Sample Description	Odour
On-Base				
Bohle/Louisa Creek/Town Common				
0874	SD013	13/04/2022	Sandy LOAM. Some fine gravels, minor silt, some organic content (plant material). No surface water present at time of sample collection.	No odour
0874	SD014	13/04/2022	Sandy SILT. Dark red, minor organic content. Sampled from still, deep water beneath the bridge.	No odour
0874	SD016	13/04/2022	Gravelly SAND. Poorly graded, dark brown, some biota and other plant material. Sampled from still water.	No odour
0874	SD019	21/04/2022	SAND. Fine grained, black, high organic content (biota, grass and roots). Sampled from very slowly flowing water.	No odour
0874	SD112	12/04/2022	Sandy SILT. Low plasticity, high organic content (rootlets).	No odour
0874	SD123	21/04/2022	Sandy CLAY. Surface gravel, poor plasticity. Sampled from stagnant pond.	No odour
0874	SD125	13/04/2022	Silty CLAY. Medium plasticity, minor organic material (plant material). Sampled from still water.	No odour
0874	SD126	13/04/2022	Silty CLAY. Low plasticity, brown, high organic content (rootlets). Sampled from lake.	No odour
0874	SD131	13/04/2022	Clayey SILT. Medium plasticity, dark grey, high organic content (plant material). Sampled from still water.	Organic odour
Mundy Creek Catchment				
0874	SD001	13/04/2022	Sandy GRAVEL. Medium-coarse, poorly graded, reddish brown colour. Sampled from slowly flowing water in concrete culvert.	No odour
0874	SD010	13/04/2022	Silty SAND. Well graded, black, high organic content. Sampled from stagnant water at end of culvert.	No odour
0874	SD106	13/04/2022	Silty CLAY. Medium plasticity, dark brown, high organic material (plant material). Sampled from shallow flowing water.	No odour
0874	SD121	13/04/2022	Sandy LOAM. Low plasticity, black. Some organic material (rootlets).	No odour
0874	SD132	13/04/2022	SAND. Medium-coarse, poorly graded, minor silt content, reddish brown to black, minor organic content. Sampled from slowly flowing water in concrete culvert.	No odour
Three Mile Creek				
0874	SD102	13/04/2022	Clayey SILT. Medium plasticity, brown-black, trace organic content (plant material). Sampled from flowing concrete culvert.	No odour
Off-Base				
Bohle/Louisa Creek/Town Common				
0874	SD017	11/04/2022	Silty GRAVEL. Black, angular gravels, very stiff matrix, high organic component (grass). Sampled from marshy creek.	No odour
0874	SD021	11/04/2022	Sandy GRAVEL. Grey, sub-angular, high organic component (grass). Sampled from earthen drain.	No odour
0874	SD110	12/04/2022	Sandy SILT. Black, well graded, low plasticity, high organic matter content.	Organic odour
0874	SD111	13/04/2022	Sandy SILT. Brown, well graded, low plasticity, high organic matter content. Stagnant water present.	Organic odour
0874	SD120	11/04/2022	Silty GRAVEL. Large angular rock fragments, very stiff, black with light brown mottle, some organic content (rootlets). Sampled from earthen drain.	No odour
0874	SD127	11/04/2022	Silty GRAVEL. Large angular rock fragments, very stiff, dark brown, some organic content (rootlets). Sampled from concrete culvert.	No odour
0874	SD129	11/04/2022	Sandy GRAVEL. Sub-angular pebbles. Sampled from Bohle River.	No odour
0874	SD201	11/04/2022	Silty SAND. Black with grey mottles.	Organic odour
0874	SD202	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
0874	SD203	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
0874	SD204	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
0874	SD205	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
0874	SD206	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
0874	SD207	5/05/2022	Silty CLAY. Low to medium plasticity, dark brown, soft, trace of fine sands.	Coastal/mangrove mud odour
Mundy Creek Catchment				
0874	SD108	17/04/2022	CLAY. High plasticity, brown colour, some minor coarse fragments. Sampled from ponded water in creek.	Organic odour
0874	SD109	17/04/2022	SAND. Coarse, well graded, trace organics. Sampled from creek, under bridge.	No odour
0874	SD113	17/04/2022	SAND. Medium-coarse, poorly graded, black, high organic content (plant material). Sampled from still pond covered in lillies.	No odour
0874	SD114	11/04/2022	Silty CLAY. Dark brown, medium plasticity, minor organic content (plant material). Sampled from creek.	No odour
0874	SD115	17/04/2022	Sandy SILT. Dark brown colour. Minor organic material (roots). Sampled from earthen creek.	No odour
0874	SD116	17/04/2022	Sandy SILT. Medium plasticity, dark brown, some organic content (roots, leaves). Sampled from turbid water beneath bridge.	Organic odour
0874	SD117	11/04/2022	Silty SAND. Dark brown, low cohesion, sub-angular grains. Some organic matter present (leaves and roots). Sampled from concrete culvert.	Slight sulfurous odour
0874	SD118	11/04/2022	Silty SAND. Dark grey-brown, moderately cohesive. Sampled from shallow creek.	Sulfurous odour
0874	SD119	11/04/2022	Sandy GRAVEL. Sub-angular, some organic content (algae). Sampled from concrete culvert.	No odour
0874	SD208	12/04/2022	Sandy CLAY. Brown, high plasticity, minor organic content	Organic odour
0874	SD209	13/04/2022	Silty CLAY. Medium plasticity, dark grey/brown colour, high organic content (plant material). Sampled from slow flowing creek.	No odour
Three Mile Creek				
0874	SD107	12/04/2022	Sandy SILT. Medium plasticity, well graded, brown, high organic content (leaves).	Organic odour
0874	SD210	12/04/2022	Clayey SILT. Medium plasticity, well graded dark grey-brown, high organic content.	No odour

Appendix C

Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	██████████	Date:	27/05/2022
Client:	Department of Defence				
Site:	RAAF Townsville (0874)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	██████████	Date:	27/05/2022
No. of primary samples:	109 groundwater, 42 surface water, 42 sediment				
Laboratory:	ALS (Townsville), NMI (Sydney)	Project Manager:	██████████		
Lab reference:	ET2202209, ET 2202285, ET2202514, RN1350702				
Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.				
Field QA/QC					
Sampling personnel	Sampling was conducted by AECOM personnel from 11 April to 5 May 2022.				
Sampling Methodology	Groundwater, surface water and sediment samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection. Surface water samples were collected from immediately below the water surface. Sediment samples were collected from within the water body, where possible.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (nine in total). Concentrations of all analytes tested were reported below the LOR for rinsate samples.				
Trip Blanks	Trip blank samples were submitted to the laboratory at a rate of one per batch of primary samples delivered to the laboratory (one in total). Concentrations were reported below the LOR for all analytes tested in the trip blank. Trip blanks were not submitted for batches where samples on private properties were collected.				
Eskies to Laboratory	A total of seven eskies of samples in three deliveries were submitted to ALS across the sampling event. One esky was submitted to NMI.				
Frequency of field QC	Field duplicates (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples (four duplicates and triplicates for groundwater, one duplicate and triplicate for surface water and one duplicate and triplicate for sediment). The target frequency of 10% for field duplicates and triplicates was achieved for all matrices.				
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 2.2°C and 5.3°C. All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.				
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F .				

Laboratory QA/QC

Tests requested/reported

Samples were analysed and reported as requested on the COC

Holding time compliance

Samples were extracted and analysed within recommended holding times with the exception of moisture content testing on sediment samples collected between 11 and 13 April 2022 in batch ET2202209. The delay was due to the public holidays in April delaying the shipment of samples from Townsville to Brisbane. As moisture content is a physical analytical method and all PFAS analysis was completed within holding time, this does not affect the outcomes of the sampling program.

Laboratory Accreditation

The laboratory analysis was conducted by ALS Environmental Pty Ltd (Townsville) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.

Frequency of laboratory QC

The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision with the following exceptions:

- Moisture content in batch ET2202514 with an actual rate of 8.33% instead of 10%.. Moisture content is a physical analytical method, not a parameter used to assess against a guideline and therefore the reduced frequency of quality control samples does not affect the outcomes of the sampling program.
- The frequency of laboratory duplicates for PFAS in batch ET2202209 was 8% as opposed to an expected rate of 10% in accordance with internal ALS standards. This rate of analysis whilst lower than ALS standards meets NEPM 2013 requirements.

Method Blank

No method blank value outliers were reported.

Laboratory duplicate RPDs

Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples with the exception of :

- Perfluorohexane sulfonic acid (PFHxS) in batch ET2202209 which calculated an RPD of 46.9% for sample 0874_SD125_220413, above the acceptance limit of 20% for laboratory duplicates.

Laboratory control spike (LCS) recovery

All LCS recoveries were reported within acceptable limits, except:

- Perfluorononanoic acid (PFNA) recovery of 146% was reported above the acceptance limit for an anonymous sample in batch ET2202285

Matrix spike recovery

All matrix spike (MS) recoveries were within control limits, except:

- In batch ET2202285 for PFHxS and PFOS which were not determined in water for sample 0874_MW021_220421 due to background level being greater than or equal to four times the spike level.
 - In batch ET2202209 for PFHxS and PFOS which were not determined in soil for sample 0874_QC103_220412 due to background level being greater than or equal to four times the spike level.
 - In batch ET2202209 for PFHxS and PFOS which were not determined in water for sample 0874_MW244_220413 due to background level being greater than or equal to four times the spike level.
- Some matrix interference was noted in batch RN1350702

Surrogate spike recovery

No surrogate recovery outliers were reported for any of the ALS batches.

The following surrogate recoveries were reported outside the acceptable range (of 60-120%) in batch RN1350702:

Soil

	PFAS results in batch RN1350702 were corrected for surrogate recoveries reported outside the acceptance range.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	<p>Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels.</p> <p>LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples:</p> <p>ET2202209: SD118_220411, SD201_220411, SD109_220412, SD113_220412, SD125_220413, SD125_220413, SD125_220413, SD125_220413, SW125_220413, SW132_220413, SW118_220411, SW001_220413, SW017_220411, SW021_220411, MW243_220412, 0874_SW119_220411, QC111_20412, MW223, MW112_220412, MW114_220412, MW245_220412, MW043_220413, QC114_220413, MW009_220413</p> <p>ET2202285: SD123_220421, SD019_220421, MW204_220414, MW206_220414, MW204_220414, MW252_220414, MW261_220414, QC117_220414, MW046_220420, MW081_220420, MW005_220420, MW125_220420, MW129_220420, MW055_220421, MW045_220421, MW015_220421, QC110_220421, MW016_220421, QC120_22042, MW021_220421, MW139_220421, MW138_220421, MW110_220421, MW109_220421, SW123_220421, MW247_220421, MW248_220421, MW026_220421, MW033_220421, MW034_220421, MW026_220421, MW248_220421, MW247_220421, MW120_220421, MW116_220421, MW063_220421, MW126_220422, MW013_220422, MW061_220422, SW012_220422, MW232_220422, MW470_220422.</p>
Field duplicate RPDs	Field duplicate RPDs were reported within control limits.
Field triplicate RPDs	<p>Field triplicate RPDs were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none"> • PFHxA, PFOS and PFHxS in 0874_SD110_220412 and 0874_QC203_220412 • PFOS in 0874_SD010_220413 and 0874_QC207_220413 • PFBS, PFHxA and PFOA in 0874_SD102_220413 and 0874_QC209_220413 <p>Triplicate concentrations were within the same order of magnitude compared to the concentrations in the primary sample and this is not considered to impact interpretation of results. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.</p>

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
 **High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))
 ***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Date Analysis Commenced : 29-Apr-2022
Issue Date : 11-May-2022 12:22

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
██████████	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
██████████	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
██████████	2IC Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample "0874_SD125_220413" shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- \$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: The LOR values of particular analytes for particular samples have been raised due to matrix interferences.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to matrix interference (sediment) or the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: Sample '0874_SD125_220413' (ET2202209-090) required dilution prior to analysis due to the presence of high level contaminants. LOR values have been adjusted accordingly. Surrogate recoveries were unable to be determined.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Laboratory Control outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- Analysis Holding Time Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202209--090	0874_SD125_220413	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	46.9 %	0% - 20%	RPD exceeds LOR based limits
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202209--050	0874_QC103_220412	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202209--050	0874_QC103_220412	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202209--072	0874_MW244_220413	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202209--072	0874_MW244_220413	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	4	38	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	38	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	38	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	38	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	38	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard

Matrix: WATER

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received : 21-Apr-2022 08:30
Client Requested Due Date : 06-May-2022
Issue Date : 22-Apr-2022
Scheduled Reporting Date : 06-May-2022

Delivery Details

Mode of Delivery : Carrier
No. of coolers/boxes : 3
Receipt Detail : MEDIUM HARD ESKY
Security Seal : Intact.
Temperature : 2.2/2.4/3.6°C - Ice present
No. of samples received / analysed : 109 / 107

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
22/4/2022: SRN has been resent to acknowledge a change to estimated due dates for analysis.
For any further information regarding these adjustments please contact client services at [Redacted]
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
\$\$ conducted by ALS Townsville, NATA accreditation no. 825, (Site no. 23472 for Chemical Testing and Site no. 23313 for Biological Testing)
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X - PFAS: Samples "0874_SD123_220421" & "0874_SD019_220421" required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. Surrogate recoveries not determined.
- EP231X-INJ PFAS: Samples "0874_MW081_220420", "0874_MW021_220421", & "0874_MW248_220421" required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of particular analytes have been raised due to sample matrix interferences.
- EP231X PFAS: High LCS recovery deemed acceptable as all associated analyte results are less than LOR
- EP231X PFAS: Particular samples required dilution due to sample matrix. LOR values have been adjusted accordingly.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to matrix interference (sediment) or due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Order number	: 60612487_2.1	No. of samples analysed	: 105

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- Laboratory Control outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP231B: Perfluoroalkyl Carboxylic Acids	QC-4312337-002	----	Perfluorononanoic acid (PFNA)	375-95-1	146 %	69.0-130%	Recovery greater than upper control limit
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202285--078	0874_MW021_220421	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ET2202285--078	0874_MW021_220421	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Outliers : Frequency of Quality Control Samples

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Method					
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	4	99	4.04	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received : 27-Apr-2022 08:50
Issue Date : 28-Apr-2022
Client Requested Due Date : 11-May-2022
Scheduled Reporting Date : 12-May-2022

Delivery Details

Mode of Delivery : Carrier
Security Seal : Intact.
No. of coolers/boxes : 2
Temperature : 2.2°C, 3.7°C - Ice present
Receipt Detail : MEDIUM ESKY
No. of samples received / analysed : 105 / 105

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
The laboratory acknowledges your requested reporting date of 10 day TAT, however due to the analytical request and associated procedures involved the requested due date will not be possible. Please note the best practical due date has been assigned.
28/04/2022: SRN has been resent to acknowledge change of sampling date for -038 and addition of [Redacted] to deliverables. For any further information regarding these adjustments please contact client services at [Redacted]
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order : **ET2202514**
Client : **AECOM AUSTRALIA PTY LTD**
Contact : [REDACTED]
Address :
 BRISBANE
Telephone : ----
Project : QLD_0874_PFASOMP
Order number : 60612487_2.1
C-O-C number : 37135
Sampler : [REDACTED]
Site : QLD_0874
Quote number : TV/007/21 v2 - Compass
No. of samples received : 14
No. of samples analysed : 14

Page : 1 of 11
Laboratory : Environmental Division Townsville
Contact : [REDACTED]
Address : [REDACTED]
Telephone : [REDACTED]
Date Samples Received : 10-May-2022 08:40
Date Analysis Commenced : 12-May-2022
Issue Date : 19-May-2022 13:08

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- All analysis conducted by ALS Sydney, NATA accreditation no. 825, site no 10911.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

- (SOIL) EP231S: PFAS Surrogate
- (SOIL) EA055: Moisture Content (Dried @ 105-110°C)

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: SOIL				Laboratory Duplicate (DUP) Report					
Laboratory sample ID	Sample ID	Method: Compound	CAS Number	LOR	Unit	Original Result	Duplicate Result	RPD (%)	Acceptable RPD (%)

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Moisture Content	1	12	8.33	10.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- All analysis conducted by ALS Sydney, NATA accreditation no. 825, site no 10911.
- ***Samples were originally received by ALS Townsville (9.9, 6.0°C) forwarded to ALS Brisbane for analysis.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 21
Report No. RN1350702

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW

REPORT OF ANALYSIS

Page: 9 of 21
Report No. RN1350702

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW
Accreditation No. 198

05-MAY-2022

Client purchase order number:	60612487_2_1
Temperature of samples:	Chilled
Comments:	
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work.

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation.

NMI Terms and Conditions are available on the web at

<https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PFAS OMP		Project Number:	606124	
Project Location:	KARF TSV		Client:	60612481	
PM Name:	[REDACTED]		Fieldwork Staff Name:	DEFENCE	

This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.

INSTRUMENT DETAILS					
Supplier:	AIRMET				
Make and Model:	YSI PRO PLUS				
Serial Number:	09K100890				

CALIBRATION					
CALIBRATE WITH CALIBRATION SOLUTIONS					
Date and Time:	11/04 0740				
Parameter	Acidity		Conductivity	ORP	Dissolved Oxygen
Units	pH 7	pH 4	µS/cm	MLV	Mg/L
Calibration Standard Concentration:	7.00	4	2655	240	11.62
Calibration Reading:	6.98	4.13	2567	224	11.87
Calibration Temperature:	22.80	20.30	22.20	22.30	21.10

ONGOING CHECKS					
BUMP TEST WITH CALIBRATION SOLUTION					
Date and Time:	12/04/22 07:30				
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH	pH	µS/cm	ORP ppm V	PPM
Calibration Standard Concentration:	7.00	4.00	2655	234.1	-

m	Metre		

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Defence, 2019a) at RAAF Base Townsville (the 'Base') located in the North Queensland Region. The Monitoring Area (which includes areas on-Base and off-Base), location of the Base and the PFAS Source Areas are shown in **Figure 1** in **Appendix A**.

The OMP for Townsville (Defence, 2019a) includes the following sampling events:

- Biannual groundwater, surface water, and sediment sampling events in April and October 2020, 2021, and April 2022.
- Rainfall event-based sampling in response to 50 mm of rainfall recorded at Townsville Aero (station 032040) by the Bureau of Meteorology (BoM) or 100 mm of cumulative rainfall over a 7-day period including:
 - Surface water sampling at 19 locations, daily for a period of five consecutive days, limited to one event per calendar year.

In July 2022, Defence extended the period for the OMP sampling events by two years with additional biannual sampling events scheduled for October 2022, April 2023, October 2023 and April 2024.

A sampling and analysis quality plan (SAQP, AECOM, 2022) provides details of the sampling events.

This sampling event factual report has been prepared to report the results of the 2022 Dry Season Sampling Event, which was completed in October 2022 with supplementary sampling completed in December 2022 to confirm selected results. This report specifically highlights first-time detections and/or new exceedances of human health screening criteria for perfluorohexane sulfonic acid (PFHxS) + perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA) and new exceedances of ecological screening criteria for PFOS and PFOA.

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP (Defence, 2019a); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2022 Dry Season Sampling Event scope of works in accordance with the SAQP (AECOM, 2022).

2.0 Scope of Work

The sampling event at the Base was completed in general accordance with the SAQP (AECOM, 2022). In summary, the scope of works for this sampling event included:

- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP), version 2.0 (HEPA, 2020)
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013)
 - Defence Routine Environment Water Quality Monitoring Manual (Defence, 2019b)
 - AS/NZ 5667:1998 Water quality – Sampling
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, 2018)
 - Relevant State regulatory guidelines.
- Obtaining permission to work in public spaces where some groundwater sampling locations are situated.
- Concurrent gauging of 26 of the nominated 27 groundwater monitoring wells across a single day to enable groundwater contour generation (refer to **Table T1** in **Appendix B**). One groundwater monitoring well (MW116) was unable to be gauged due to being decommissioned (refer **Section 3.7** for details).
- Collection of groundwater samples. MW116, MW126 and MW129 were decommissioned prior to the sampling round and were therefore not accessible. MW301 and MW470 were dry. Of the 85 locations proposed to be sampled, 57 on-Base groundwater samples, and 23- off-Base groundwater samples (refer to **Table 1** below, and **Figure 2** in **Appendix A**) were able to be collected. Standing water level (SWL) was measured in all wells immediately prior to sampling.
- Collection of co-located surface water and sediment samples. Of the 42 planned locations, sediment was able to be collected at 14 on-Base and 27 off-Base locations, and surface water was able to be collected at 7 on-Base and 26 off-Base locations (refer to **Table 2** and **Table 3** below, and **Figure 3** in **Appendix A**). Surface water was not able to be collected at all locations as some areas were dry (SW001, SW013, SW016, SW019, SW102, SW121, SW132). Surface water was unable to be collected at SW125 due to access constraints from overgrown vegetation. Sediment was unable to be collected at SD126 as sediment was not present.
- Analysis of all samples for the PFAS suite (28 analytes) at the standard limit of reporting (LOR).
- Resampling and analysis for the PFAS suite (28 analytes), at the standard LOR, of MW218, SD014, SD125 and SD120, in December 2022, to confirm new detects and new historical maximums.
- Collection of field duplicate and triplicate samples at a rate of 1 in 10 primary samples to be analysed for PFAS suite, one rinsate sample per fieldwork day, and one trip blank per batch.
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Dry Season Sampling Event Factual Report.

Deviations from the above outlined scope of work in accordance with the SAQP are documented in **Section 3.7**.

Table 1 Groundwater Sampling Locations

Source Area	Monitoring Well ID
Sub-Management Area 1 – includes a Former Fire Training Area.	MW013, MW116*, MW118, MW126*, MW129*
Sub-Management Area 2 – includes a Former Fire Training Area, Fire Station and Fuel Farm.	MW005, MW015, MW016, MW021, MW046^, MW054^, MW055, MW081, MW090, MW109, MW110, MW138, MW139, MW246, MW250, MW251
Sub-Management Area 3 – includes 5th Aviation Regiment Precinct.	MW009, MW038, MW043, MW114, MW125, MW142, MW247, MW248
Northern section of Base, downgradient of Sub-Management Area 2	MW136, MW140, MW243, MW244
North west of Runway 07/25	MW112
East and south east of Sub-Management Area 1	MW026, MW033, MW034, MW061, MW063, MW120, MW222, MW223, MW224, MW232
South of Ingham Road – External Defence Properties (ID 0875, 1273, 1274)	MW226, MW227, MW229
Balance of Base area	MW002, MW004, MW056, MW057, MW122, MW135, MW234, MW241, MW242, MW245, MW255, MW265, MW300, MW470^
Off-Base – Townsville Town Common, north of the Base	MW205, MW206, MW207, MW208
Off-Base – Suburb of Pallarenda, north east of the Base	MW233, MW252, MW253, MW301^
Off-Base – Suburbs of Rowes Bay and Belgian Gardens, east of the Base	MW211, MW212, MW213, MW214, MW215, MW216, MW264, MW467, MW471
Off-Base – Suburb of Garbutt, east and south of the Base	MW217, MW218, MW219, MW221, MW225, MW263, MW267

* Following finalisation of the SAQP, some locations were decommissioned by contractors conducting works in Sub-management Area 1. These locations will be removed from the next revision of the SAQP.

^ MW301 and MW470 were dry.

Table 2 Surface Water Sampling Locations

Locations	Surface Water Location ID	
On-Base	Mundy Creek Catchment	SW001, SW010, SW106, SW121, SW132
	Bohle River / Louisa Creek / Townsville Town Common	SW013, SW014, SW016, SW019, SW112, SW123, SW125, SW126, SW131
	Three Mile Creek Catchment	SW102
Off-Base	Mundy Creek Catchment	SW108, SW109, SW113, SW114, SW115, SW116, SW117, SW118, SW119, SW208, SW209
	Bohle River / Louisa Creek / Townsville Town Common	SW017, SW021, SW110, SW111, SW120, SW127, SW129, SW201, SW202, SW203, SW204, SW205, SW206, SW207
	Three Mile Creek Catchment	SW107, SW210

Table 3 Sediment Sampling Locations

Locations		Sediment Location ID
On-Base	Mundy Creek Catchment	SD001, SD010, SD106, SD121, SD132
	Bohle River / Louisa Creek / Townsville Town Common	SD013, SD014, SD016, SD019, SD112, SD123, SD125, SD126 [^] , SD131
	Three Mile Creek Catchment	SD102
Off-Base	Mundy Creek Catchment	SD108, SD109, SD113, SD114, SD115, SD116, SD117, SD118, SD119, SD208, SD209
	Bohle River / Louisa Creek / Townsville Town Common	SD017, SD021, SD110, SD111, SD120, SD127, SD129, SD201, SD202, SD203, SD204, SD205, SD206, SD207
	Three Mile Creek Catchment	SD107, SD210

[^] No sediment present at SD126 available for sampling due to rocky conditions.

3.0 Methodology

The methodology used for the 2022 Dry Season Sampling Event was in general accordance with the SAQP (AECOM, 2022) and is summarised in **Sections 3.1-3.7**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	An initial gauging round of 26 monitoring wells using an interface probe was undertaken to enable groundwater contour generation (results detailed in Table T1, Appendix B). The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples.
Water Quality Parameters	Field parameters are collected ex situ post-sampling using water from the HydraSleeve™. Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T2, Appendix B). Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T2, Appendix B). For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. HydraSleeves™ were not redeployed due to conflict with other groundwater monitoring programs.

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Field parameters are collected ex situ post-sampling using water from the stainless-steel scoop. Temperature, EC, DO, ORP, pH and observations of water quality were recorded using a calibrated water quality meter (results detailed in Table T4, Appendix B). Equipment calibration certificates for the water quality meter are provided in Appendix F .
Sampling Methodology	Samples were collected from immediately below the water surface, with either a sampling pole or directly into laboratory supplied sample containers, to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory-supplied container was lowered into the water with the cap immediately applied once the container was full. Where the waterway could not be accessed from the bank a telescopic sampler with a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into the new laboratory supplied container.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a piston sediment sampler or with a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T6, Appendix B .

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 7**, below.

Table 7 QA/QC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e., splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included at a rate of one per batch of samples (excluding private property sampling). Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. Australian Laboratory Services (ALS) Environmental Pty Ltd Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA). Chain of custody forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan (NEMP), Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, version 2.0 (HEPA 2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. October 2017 [updated September 2019].
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2019a) and SAQP (AECOM, 2022), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 8** below.

Table 8 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off base groundwater results will be compared to these criteria.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

There are no endorsed human health or ecological guideline values available for sediment.

3.6 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2022). Data validation assessment is provided in **Appendix C**. Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 9 lists the deviations from the SAQP (AECOM, 2022) during this sampling round.

Table 9 Deviations from the SAQP during 2022 Dry Season Sampling Event

SAQP	2022 Dry Season Sampling Event	Impact of Deviation
Collection of field parameters at all sampling locations	Water quality parameters were not recorded for groundwater monitoring wells MW004, MW255 and MW207 due to data migration errors in AECOM's electronic data collection program. There was insufficient water at MW246 MW471 for collection of water quality parameters. MW301 and MW470 were dry and therefore parameters were not recorded.	Minimal impact – water quality parameters are not used for interpretation of PFAS data. These locations will be resampled in the wet season of 2023.
Sample MW116, MW126 and MW129	MW116, MW126 and MW129 were unable to be gauged and sampled as they had been decommissioned by contractors working in Sub-Management Area 1.	Minimal impact – two monitoring wells (MW013 and MW118) remain within Sub management area one and were able to be sampled, therefore coverage can be maintained via these and surrounding monitoring wells.
Resample MW218, SD014, SD120, SD125	Resampled MW218, SD014, SD120, SD125 in December 2022 due to new historical maximums reported during October Dry Season 2022 sampling event.	Minimal impact – The resampled results for MW218 and SD120 were closer to the October 2022 sampling result and therefore confirms the concentrations at these location in the 2022 dry season. The resampled results for SD014 and SD125 were closer to previous historical maximum (pre-October 2022) therefore confirms the concentrations at these location in the 2022 dry season.
Sample MW301, and MW470	MW301 and MW470 were not sampled as the wells were dry.	Minimal impact – locations was last sampled on 14 April 2022 and will be sampled again in the 2023 wet season. There are also three other wells in the vicinity of Rowe's Bay, where MW301 and MW470 are located. The nearby wells provide coverage of the area as part of the dry season groundwater monitoring round.
Collect surface water samples at SW001, SW013, SW016, SW019, SW125, SW121, SW132, SW102 and SW107	SW001, SW013, SW016, SW019, SW121, SW132, SW102 and SW107 were not sampled due to insufficient water volume. SW125 was not sampled due to access constraints from overgrown vegetation.	The results demonstrate that water is not always present in these areas all year round. Minimal impact, locations will be sampled during the wet season sampling event 2023. One other surface water sample was taken near SW107 (Three Mile Creek). Three other surface water samples were taken near SW121 and SW132 (Mundy Creek Catchment). Sediment samples were able to be collected.
Sediment sampling at SD126	SD126 was covered with rocks and there was no sediment available for sampling.	Minimal impact – location has historically been sampled and will be resampled in the wet season of 2023.

4.0 Well Network Maintenance

Maintenance on five existing monitoring wells within the RAAF Base Townsville PFAS OMP network was completed by AECOM on 1 August 2022.

Table 10 below provides a summary of the work completed. **Appendix G** present a photolog of completed maintenance works.

Table 10 Summary of Maintenance Works Completed By AECOM On The Well Network

Well ID	Description of Work
MW244	Dislocated and rusted gatic and cover replaced with new monument.
MW056	Existing monument rusted at base, replaced monument.
MW222	Damaged gatic bolt, replaced single bolt.
MW262	Damaged/bent bolt tabs, new gatic and cover installed
MW253	Existing monument damaged. New gatic installed level with surrounding ground to mitigate future damage.

Prior to the works where ground disturbance was required, a service locator was engaged to ensure avoidance of services for safety and property protection purposes during digging around the headworks of the well.

5.0 Field Observations and Results

The 2022 Dry Season Sampling Event was completed between 5 October and 19 October 2022 and on the 12 and 13 December 2022. Groundwater gauging and deployment of HydraSleeves™ was conducted at the beginning of the sampling round.

The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event are recorded in **Table 11**.

Table 11 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	<p>Weather was warm and sunny during the sampling program in October and December 2022. The temperature in October 2022 ranged between 21.5 °C and 31.5 °C during the sampling event and 25.5 °C to 32.7 °C in December 2022.</p> <p>A summary of the rainfall recorded before and during the event includes:</p> <ul style="list-style-type: none"> • May 2022: 153 mm. • June 2022: 24 mm. • July 2022: 50 mm. • August 2022: 1 mm. • September 2022: 21 mm. • October 2022: 42 mm (however no rain was recorded during the sampling event).
Estate Management Works or Training Activities	<p>No active remediation was underway during the sampling program. Sub-management area One was undergoing preparation works for upcoming remediation activities.</p>

The results of the sampling event are summarised in **Sections 5.2-5.3**.

5.1 Groundwater

5.1.1 Observations and Field Measurements

Table 12 Groundwater Observations and Field Measurements

Item	Observations
Access	All monitoring wells were accessible.
Monitoring Well Network	MW116, MW126 and MW129 are now decommissioned and therefore were not sampled. All remaining monitoring wells were in good condition.
Field Observations	<p>Groundwater from six monitoring well locations (MW118, MW056, MW135, MW244, MW264, MW267) had a distinct organic odour while a weak organic odour was observed at MW016, MW055, MW002, MW033, MW226, MW227, MW234, MW265, MW213, MW225 and MW467.</p> <p>Groundwater colour was typically recorded as turbid light brown, low to medium turbidity.</p> <p>No visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells.</p> <p>Field observations are presented Table T2, Appendix B.</p>
Depth to Groundwater	<p>For the entire October 2022 dataset, depth to groundwater ranged between 0.566 (MW002) and 3.720 (MW470) metres below top of casing (mBTOC). Groundwater elevations were between 0.375 (MW244) and 3.934 metres Australian Height Datum (mAHD) (MW038) during the sampling round. These groundwater gauging data are presented in Table T2, Appendix B.</p> <p>Selected wells were gauged to ascertain groundwater flow direction. For the gauging event on 5 October 2022 (presented in Table T1, Appendix B depth to groundwater ranged between 0.566 (MW002) and 3.226 (MW225) metres below top of casing (mBTOC). Groundwater elevations were between 0.413 (MW244) and 4.047 metres Australian Height Datum (mAHD) (MW232)</p>
Groundwater Flow Direction	Groundwater contours and inferred groundwater flow directions for the gauging event on 5 October 2022 are shown on Figure 4 in Appendix A . In the central and northern portions of the base the inferred local groundwater flow direction is to the north-north-west towards the Town Common. There appears to be localised mounding of groundwater in the south eastern corner of the Base with radial groundwater flow to the north, north-east and south-east which is consistent with historical data. The groundwater flow off-Base to the east is flat.
Water Quality Parameters	<p>Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T2, Appendix B and are summarised below, covering the main sampling event completed in October 2022:</p> <ul style="list-style-type: none"> • DO results ranged between 0.19 mg/L (MW227) to 7.4 mg/L (MW208) indicating poor to well oxygenated conditions. • EC ranged from 233.2 μS/cm (MW233) to 82,555 μS/cm (MW225) indicating fresh to saline conditions. • pH ranged from 3.28 (MW206) to 8.96 (MW054). pH results generally indicated acidic to slightly alkaline conditions. • ORP ranged from -199.8 mV (MW467) to 256 mV (MW206) indicating moderately to strongly reducing conditions. • Temperature ranged from 24.4°C (MW056) to 31.2°C (MW090).

5.1.2 Groundwater Analytical Results

Of the 81 groundwater wells sampled during the October 2022 dry season sampling event, 73 samples reported concentrations of PFAS compounds above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T3, Appendix B**. 11 of the 23 groundwater samples collected from off-Base monitoring wells exceeded the drinking water guideline for PFOS+PFHxS. No exceedances for PFOA were reported.

Three exceedances of the ecological guideline for PFOS were reported for off-Base wells (MW218, MW221 and MW225). A total of 46 on-Base samples exceeded the ecological guideline for PFOS, and one on-Base sample exceeded the ecological guideline for PFOA (MW021).

Historical groundwater results are presented in **Table T8, Appendix B**. There were no first-time detections of PFOS, PFOA or PFHxS in any samples during this sampling event.

There were no new exceedances of the human health or ecological guidelines during the sampling. Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations except for MW218 which was resampled in December 2022. The resampled result confirmed new historical maximum concentrations of PFOS, PFOS+PFHxS and PFOA in groundwater at this location.

5.2 Surface Water

5.2.1 Observations and Field Measurements

Table 13 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event. Locations where surface water was not present are noted in Section 3.7 .
Field Observations	<p>Surface water from four locations, SW131, SW021, SW114 and SW117, had weak organic odours.</p> <p>Surface water at SW208 had a slight biological sheen on the surface. Algae was noted at SW013, SW131, SW102 and SW120.</p> <p>No other visible or olfactory indications of note were observed during the sampling of the surface water locations.</p> <p>Field observations are presented Table T4 in Appendix B.</p>
Water Quality Parameters	<p>Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T4, Appendix B and are summarised below for the main sampling event completed in October 2022:</p> <ul style="list-style-type: none"> DO results ranged between 0.85 mg/L (SW117) and 13.18 mg/L (SW120) indicating poor to well oxygenated conditions. EC ranged from 625 µS/cm (SW123) to 56,549 µS/cm (SW208) fresh to saline conditions. Data transcription errors for EC readings were identified at SW108 and SW209 and were removed from the data set. pH ranged from 6.64 (SW106) to 9.38 (SW119). pH results indicated near neutral to moderately alkaline conditions. ORP ranged from 25.9 mV (SW010) to 198.3 mV (SW123) indicating neutral to moderately reducing conditions. Temperature ranged from 23.6°C (SW127) to 36°C (SW106).

5.2.2 PFAS Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T5, Appendix B**. PFAS was detected in 32 of the 33 samples collected. PFOS concentrations in 13 samples exceeded the adopted ecological guidelines for PFOS. No samples exceeded the ecological or recreational guideline for PFOA. No new exceedances of PFOS, sum of PFOS+PFHxS or PFOA were reported. Sum of PFOS+PFHxS concentrations in three on-Base samples (SW123, SW126 and

SW131) and six off-Base samples (SW110, SW111, SW113, SW117, SW118, and SW119) exceeded the adopted recreational use guidelines (**Table T5, Appendix B**).

Historical surface water results are presented in **Table T9, Appendix B** and were all generally reported within the historical range of concentrations, with the exception of SW127 which recorded a new historical maximum concentration of 0.07 µg/L, previously 0.06 µg/L. This result is within the same order of magnitude as historical results and therefore no additional actions were triggered.

5.3 Sediment

5.3.1 Observations and Field Measurements

Table 14 Sediment Observations

Item	Observations
Access	SD126 was not able to be accessed for sampling due to the surface being covered by rocks and no sediment available for sampling.
Field Observations	No visible or olfactory indications of contamination were observed during the sampling of sediment locations. Organic odours were detected at sample locations SD108, SD118 and SD107. Sediment logging and observation data are presented in Table T6, Appendix B .

5.3.2 PFAS Sediment Analytical Results

Of the 41 sediment samples collected, 38 samples reported concentrations of PFAS compounds above the laboratory LOR. There was one first-time detection of PFOA in an off-Base sample from SD120 (0.0002 mg/kg) and no first-time detections of PFOS+PFHxS in sediment. The PFAS sediment analytical results from this sampling event are presented in **Table T7, Appendix B**.

Historical sediment results presented in **Table T10, Appendix B** were all generally reported within the historical range of concentrations, with the exception of SD014 (on-Base), SD125 (on-Base) and SD120. These locations were resampled in December 2022 and the following observations made:

- Resampled results for SD014 were within the historical range of concentrations and therefore a new historical maximum concentration is not confirmed;
- Resampled results for SD120 confirmed the new detection of PFOA at this location; and
- Resampled results for SD125 confirmed the new historical maximum concentrations at this location.

There are no endorsed human health or ecological guideline values available for sediment.

6.0 Summary and Next Sampling Event

6.1 Summary of Sampling Event

The routine OMP Dry Season Sampling Event was undertaken between 5 October and 19 October 2022 and included sampling from:

- 80 groundwater monitoring locations;
- 33 co-located surface water and sediment monitoring locations; and
- 8 sediment sampling locations.

Table 15 summarises the findings of the sampling event and the recommended actions.

Table 15 Summary of Sampling Event

Item	Comment	Recommended Actions
Access to sampling locations	Although accessible, there was insufficient water volume at MW301 and MW470 to sample during this sampling event. Although accessible, there was no water present at SW001, SW013, SW019, SW125, SW121, SW132, SW102 and SW107 and no sediment present at SD126.	Sampling event in April 2023 will capture future results.
<u>Analytical Results</u>	PFAS compounds were detected above laboratory LOR in 71 of the 81 groundwater samples, 32 of the 33 surface water samples and of the 44 sediment samples analysed in the Dry Season sampling round for 2022. The results were consistent with historical results except for those which were resampled. The fluctuation of concentrations of PFOS at SD125 warrant further investigation by the lead consultant.	Ongoing monitoring in accordance with the OMP. Lead consultant to verify potential PFAS sources contributing to concentrations of PFAS detected at SD125.
<u>First-time detections and new exceedances</u> of PFOS, sum of PFHxS+PFOS and PFOA	There were no first-time detections of PFOS, sum of PFHxS+PFOS or PFOA in surface water and groundwater samples. There were no first-time detections of PFOS or sum of PFHxS+PFOS in sediment. One first-time detection of PFOA was reported for off-Base sediment sample SD120. There were no new exceedances for PFOS of the 95% species protection ecological guidelines (HEPA, 2020). There were no new exceedances of the HEPA (2020) recreational use – surface water guidelines or HEPA (2020) drinking water – groundwater guidelines for sum of PFHxS+PFOS and PFOA (for off-Base samples only).	Ongoing monitoring in accordance with the OMP.

6.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for April 2023.

6.3 Upcoming Annual Interpretive Report

The next annual interpretive report for the period November 2021 to October 2022 is scheduled for May 2023.

NA - Well construction details are not available in ESdat for some wells

NR - Not recorded

mbtoc - metres below top of casing

TOC - top of casing

mAHD - metres above Australian Height Datum

DO - Dissolved Oxygen

EC - Electrical Conductivity

Redox - Reduction Oxidation Potential

Temp - Temperature

mg/L - milligrams per litre

µS/cm - microsiemens per centimetre

mV - millivolt

°C - degrees Celsius

"-" denotes no data collected

Three Mile Creek													
0874	SW107	0874_SW107_221014	14/10/2022	Dry. Not sampled.									Dry
0874	SW210	0874_SW210_221014	14/10/2022	3.27	55739	8.16	130.4	27.2	Low	Clear	Nil	No	Medium flow, possible crab net downstream. Mangroves along river bed.

NA - Well construction details are not available in ESdat for some wells
 mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Redox - Reduction Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre
 µs/cm - microsiemens per centimetre
 mV - millivolt
 °C - degrees Celsius
 "-" denotes no data collected

Property ID	Location ID	Sample Date	Sample Description	Odour
On-Base				
Bohle/Louisa Creek/Town Common				
0874	SD013	17/10/2022	Silty CLAY, dark brown, high organic material content, dry.	Earthy odour
0874	SD014	7/10/2022	SAND, fine grained, poorly graded, wet.	No odour
0874	SD016	17/10/2022	Silty CLAY, dark brown, high plasticity, with organic material.	No odour
0874	SD019	17/10/2022	CLAY, high plasticity, light brown, with traces of cobbles and gravels, with organic material (roots), dry.+	No odour
0874	SD112	7/10/2022	Sandy CLAY, soft, light grey, low plasticity, fine to medium grained sand, well graded, wet.	No odour
0874	SD123	17/10/2022	Sandy CLAY, grey to brown, high plasticity, saturated. Sampled close to culvert.	No odour
0874	SD125	17/10/2022	CLAY, light and dark brown, traces of gravel, trace organic material, dry. Sampled away from surface water due to restricted access.	No odour
0874	SD126	19/10/2022	NOT SAMPLED. Surface too rocky. No accessible sediment for sample.	No odour
0874	SD131	19/10/2022	CLAY, soft, dark brown/black, medium plasticity, with organic material (roots), wet.	No odour
Mundy Creek Catchment				
0874	SD001	17/10/2022	Gravelly CLAY, light brown, trace angular gravels and cobbles, dry. Sampled from top of culvert due to hard/compact surface.	No odour
0874	SD010	17/10/2022	Silty CLAY, black, high plasticity, with organic materials (roots), saturated. Sampled from culvert.	No odour
0874	SD106	17/10/2022	Silty CLAY, black, trace organic material. Sampled on bank under Mangroves.	Salty/Mangrove odour.
0874	SD121	17/10/2022	Silty CLAY, black, high plasticity, with organic materials (roots), moist. Sampled under grass.	No odour
0874	SD132	17/10/2022	Silty SAND, dark brown, with organic materials (roots), dry. Sampled from culvert.	No odour
Three Mile Creek				
0874	SD102	17/10/2022	Silty CLAY, black to brown, high plasticity, fine grained sand, with organic material. Sampled from culvert.	Fish/Marine odour.
Off-Base				
Bohle/Louisa Creek/Town Common				
0874	SD017	7/10/2022	Sandy GRAVEL, medium to large grained, poorly graded, some organic material (roots and plants), wet. Area adjacent to sample recently mowed, lots of loose grass.	No odour
0874	SD021	7/10/2022	Silty SAND, dark brown, low plasticity, fine grained, lots of organic material (roots), wet.	No odour
0874	SD110	14/10/2022	SAND, dark and light brown, fine grained, trace gravel. Sample taken from across surface water due to restricted access.	No odour
0874	SD111	14/10/2022	Silty CLAY, high plasticity, fine grained, trace organic material.	No odour
0874	SD120	7/10/2022	Sandy GRAVEL, dark brown, medium grain, poorly graded, with organic material (roots and plants), moist.	No odour
0874	SD127	7/10/2022	Silty SAND, soft, dark brown, poorly graded, with organic material (roots and leaves), wet.	No odour
0874	SD129	7/10/2022	SAND, dark brown, medium grained, poorly graded, with silt, wet.	No odour
0874	SD201	14/10/2022	SAND, pale yellow-brown, fine grained, with organic material, moist.	No odour
0874	SD202	18/10/2022	Silty CLAY, soft, dark brown, high plasticity with trace sands, saturated. Sampled on bank under Mangroves.	Salty/Mangrove odour.
0874	SD203	18/10/2022	Silty CLAY, soft, dark brown with some black with orange mottlings, high plasticity, trace sands, with organic material (roots), moist. Sampled on river bed under Mangroves.	Salty/Mangrove odour.
0874	SD204	18/10/2022	Silty CLAY, soft, dark brown and black, high plasticity, trace sands, with organic material (roots) moist. Sampled on river bed under Mangroves.	Salty/Mangrove odour.
0874	SD205	18/10/2022	Silty CLAY, soft, dark brown, high plasticity, trace sand, organic material (shells, biota), saturated. Sampled on river bed under Mangroves.	Salty/Mangrove odour.
0874	SD206	18/10/2022	Silty CLAY, soft, dark brown, high plasticity, trace sand, with organic material (roots), saturated. Sampled on river bed under Mangroves.	Salty/Mangrove odour.
0874	SD207	18/10/2022	Silty CLAY, soft, dark brown to black, high plasticity, with trace sands, with organic material (roots), saturated. Sampled on river bed under Mangroves.	Salty/Mangrove odour.
Mundy Creek Catchment				
0874	SD108	14/10/2022	Silty CLAY, dark grey to dark brown, high plasticity, fine grained. Sampled on bank under Mangroves.	Organic (mud) odour.
0874	SD109	7/10/2022	SILT, brown, medium plasticity, with organic material (some marine shell), wet.	No odour
0874	SD113	7/10/2022	Sandy CLAY, dark brown, fine grained, poorly graded, with organic materials (roots and algae), wet.	No odour
0874	SD114	7/10/2022	SILT, dark brown, low plasticity, wet.	No odour
0874	SD115	7/10/2022	Silty CLAY, brown, medium plasticity, wet.	No odour
0874	SD116	14/10/2022	Silty CLAY, brown, high plasticity, organic materials (some shell). Sampled on bank under Mangroves.	No odour
0874	SD117	7/10/2022	Silty SAND, dark brown, fine grained, poorly graded, organic material (some roots), dry.	No odour
0874	SD118	7/10/2022	Silty CLAY, dark brown, fine grained, wet.	Salty/Organic odour
0874	SD119	7/10/2022	SAND, pale brown, poorly graded, dry. Sampled above the concrete culvert airside.	No odour
0874	SD208	14/10/2022	Silty CLAY, dark brown, high plasticity, trace sand and gravels. Sampled on bank under Mangroves.	No odour
0874	SD209	7/10/2022	SILT, dark brown to black, low plasticity, wet.	No odour
Three Mile Creek				
0874	SD107	14/10/2022	CLAY, black, high plasticity, moist. Animal prints across sediment surface.	Salty/Organic odour.
0874	SD210	14/10/2022	Silty CLAY, dark brown, high plasticity, trace organics.	No odour

"-" denotes that no notes were observed for this sample

Data Validation

DATA VALIDATION REPORT

Project No.:	60612487	Validation by:	█	Date:	19/01/2023
Client:	Department of Defence				
Site:	RAAF Townsville (0874)				
Matrix type:	Groundwater, surface water, sediment	Data verified by:	█	Date:	08/02/2022
No. of primary samples:	80 groundwater, 33 surface water, 41 sediment (October 2022) 1 groundwater, 3 sediment (December 2022)				
Laboratory:	ALS (Townsville), NMI (Sydney)	Project Manager:	█		
Lab reference:	ET2205248, ET 2205356, ET2205495, RN1370689, EB2237659, RN1379140 supersedes RN1376583				
Key Issues:	<p>No QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.</p> <p>The data are considered appropriate for use to meet the project objectives.</p>				
Field QA/QC					
Sampling personnel	Sampling was conducted by AECOM personnel from 5 October to 19 October 2022. Additional sampling was conducted by AECOM personnel from 12 to 13 December 2022.				
Sampling Methodology	Groundwater, surface water and sediment samples were collected using appropriate methods as identified within the main body of the report. Hydrasleeves were installed in the well for a minimum of 24 hours prior to collection. Surface water samples were collected from immediately below the water surface. Sediment samples were collected from within the water body, where possible.				
Chain of Custody (COC)	COC documents completed as per AECOM procedures.				
Rinsate Blank	<p>Rinsate blank samples were collected at a frequency of one per field staff per day of sampling (twelve in total). One rinsate sample collected during the December 2022 resampling event was analysed by the secondary laboratory which has no affect of the validity of the results.</p> <p>Concentrations of all analytes tested were reported below the LOR for rinsate samples (refer Table C4 attached).</p>				
Trip Blanks	<p>Trip blank samples were submitted to the laboratory at a rate of one per batch of primary samples delivered to the laboratory with an additional trip blank submitted to the secondary laboratory in the December 2022 resampling event (six in total). Concentrations were reported below the LOR for all analytes tested in the trip blanks (refer Table C4 attached). Trip blanks were not submitted for batches where samples on private properties were collected.</p>				
Eskies to Laboratory	A total of six eskies of samples in three deliveries was submitted to ALS and one esky was submitted to NMI across the October 2022 sampling event. One esky was submitted to ALS and one esky was submitted to NMI during the December 2022 resampling event.				
Frequency of field QC	<p>Field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a target frequency of one in ten primary samples with the following frequencies:</p> <ul style="list-style-type: none"> • Ten duplicates and triplicates for groundwater (12.5%) • Four duplicate and triplicate for surface water (12.12%) • Six duplicate and triplicate for sediment (14.63%) <p>The target frequency of 10% for field duplicates and triplicates was achieved for all matrices. Although ten duplicate and triplicate samples were collected for groundwater,</p>				

	0874_QC102_221008 and 0874_QC202_221008 were removed from the data set due to labelling errors from the primary sample. The target frequency of 10% has still been maintained with 11.25% achieved for groundwater.
Handling and preservation	<p>Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. Sample receipt temperature was reported between 0.9°C and 17.7°C.</p> <p>All samples were received at the laboratory in appropriate sample containers with no sample container / preservation non-compliances noted.</p>
Equipment Calibration	Calibration of the water quality meter was conducted each day before sampling, see Appendix F .
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Townsville and Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	<p>The laboratory reported sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except:</p> <ul style="list-style-type: none"> • Laboratory duplicates for PFAS in water (2.63%) were below the expected rate of 10% in ET2205248. • Laboratory duplicates for PFAS in water (3.75%) were below the expected rate of 10% in ET2205356. • Laboratory duplicates for PFAS in water (1.69%) were below the expected rate of 10% in ET2205495. • Laboratory duplicates for PFAS in water (0%) were below the expected rate of 10% in EB2237659 • Matrix spikes for PFAS in water (0.00%) were below the expected rate of 5% in ET2205248. • Matrix spikes for PFAS in water (1.25%) were below the expected rate of 5% in ET2205356. • Matrix spikes for PFAS in water (1.69%) were below the expected rate of 5% in ET2205495. • Matrix spikes for PFAS in water (0%) were below the expected rate of 5% in EB2237659. <p>Appropriate frequency of quality control samples was completed for soil samples. The laboratory was provided with sufficient sample to complete the required analysis for water samples however internal laboratory procedures prevented the samples with additional volume from being selected to compete the internal laboratory QA/QC. Based on the results reported, the lower than expected frequency of quality control samples in not anticipated to impact the data set.</p>
Method Blank	No method blank value outliers were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples with the exception of 0874_SD102_221017 in batch ET2205495 for Perfluoroalkyl Acids (PFBS, PFPeS, PFHxS, PFHpS, PFOS, PFDS) ranged between 68.6 to 90.6% exceeding acceptable RPD (%) limits and Perfluoroalkyl Carboxylic Acids (PFPeA, PFHxA, PFHpA, PFOA) ranged between 61.2 to 88.2% exceeding acceptable RPD (%) limits. It was noted that the sample had poor duplicate results due to sample heterogeneity.
Laboratory control spike (LCS) recovery	All LCS recoveries were reported within acceptable limits, except QC_4676679 in batch ET2205495 for Perfluorooctane sulfonamide (FOSA) and N-Methyl perfluorooctane sulfonamide (MeFOSA) reported spike recovery (%) above the acceptable limits. This indicates that FOSA and MeFOSA concentrations may have been reported at higher

	<p>concentrations. All concentrations of FOSA and MeFOSA in batch ET2205495 were either below the LOR or within the same order of magnitude as historical results at SD019, SD123 and SW123 and therefore the dataset is not affected by the reported spike recovery (%) above the acceptable limits</p>
Matrix spike recovery	<p>All matrix spike (MS) recoveries were within control limits, except:</p> <ul style="list-style-type: none"> 0874_SD120_221007 (batch ET2205248) – Perfluoropentane sulfonic acid (PFPeS), Perfluorobutanoic acid (PFBA), Perfluorohexanoic acid (PFHxA), 10:2 Fluorotelmer sulfonic acid (10:2 FTS) all reported spike recovery (%) below acceptable limits. 0874_MW247_221010 (batch ET2205356) – Perfluorohexane sulfonic acid (PFHxS) and Perfluorooctane sulfonic acid (PFOS) were reported as not determined. 0874_SD014_221212 (batch EB2237659) – 10:2 Fluorotelmer sulfonic acid (10:2 FTS) was reported below acceptable limits. <p>Where matrix spike recoveries are reported below acceptable limits, the results for those samples may have been under reported. A review of the reported results indicates that this does not affect the interpretation of the results as they have all historically been reported <LOR or within the historical range of concentrations for these locations.</p>
Surrogate spike recovery	<p>Laboratory surrogate spike recoveries were within control limits, except 0874_SD014_221007 (batch EB2237659) PFAS Surrogate (13C4-PFOS) was reported above acceptable limits and may have led to over reporting of PFOS concentrations at this location. Resampling at this location in December indicated that the results were within the historical range and therefore new historical maximum concentrations were not confirmed and the PFOS concentrations reported by the laboratory in the October 2022 may have been falsely elevated.</p>
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	<p>No anomalous results between field observations and analysis results were noted.</p>
Data transcription	<p>A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.</p>
Limits of reporting	<p>Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels. LOR values were adjusted due to sample matrix interference or high analyte concentrations for the following samples:</p> <p>ET2205248: SD014_221007, SD021_221007, SD209_221007, SD113_221007, SD118_221007, SW209_221007</p> <p>ET2205356: MW211_221008, MW213_221008, QC103_221008, QC102_221008, QC104_221010, MW016_221010, MW046_221010, MW055_221010, MW247_221010, MW021_221011, MW015_221011, QC106_221011, MW109_221011, MW054_221011, MW081_221011, MW005_221011, MW114_221011, MW246_221011, MW248_221011, MW125_221011, MW048_221011, MW245_221012, MW139_221012, MW138_221012, MW110_221012, MW112_221012, MW063_221012, MW222_221012, MW061_221013</p> <p>ET2205495: QC117_221014, SD013_221017, SD125_221017, QC111_221017, SD121_221017, SD010_221017, SW205_221018, MW013_221019, MW219_221019</p> <p>EB2237659: SD125</p>
Field duplicate RPDs	<p>Field duplicate RPDs (as shown in Tables C1, C2 and C3) were reported within control limits except (the sample with the higher concentration is in bold):</p> <ul style="list-style-type: none"> PFBS (31%), PFHpS (33%), PFPeS (40%), PFHxS (35%) in 0874_MW015_221011 and 0874_QC106_221011 PFBS (108%), PFHxA (84%), PFPeS (115%), PFOS (125%), PFHxS (104%) in 0874_MW224_221012 and 0874_QC107_221012

Field triplicate RPDs

Field triplicate RPDs (as shown in **Tables C1, C2 and C3**) were reported within control limits for all sample sets with the exception of the following (the sample with the higher concentration is in bold):

- PFHpS(41%), PFHpA (45%), PFHxA (43%), PFPeS (33%), PFPeA (44%) in **0874_MW016_221010** and 0874_QC204_221010
- PFHxA (70%), PFOS (44%) in **0874_MW090_221011** and 0874_QC205_221011
- PFHpS (74%), PFHpA (43%), PFHxA (59%), PFPeS (33%), PFPeA (48%), PFOS (54%), PFOA (47%), PFHxS (31%) in **0874_MW015_221011** and 0874_QC206_221011
- PFOS (84%), PFHxS (71%) in 0874_MW224_221012 and **0874_QC207_221012**
- PFHpS (31%), PFHxA (76%), PFOS (37%), PFHxS (33%) in **0874_MW218_221213** and 0874_QC251_221213

Triplicate concentrations were within the same order of magnitude compared to the concentrations in the primary sample and this is not considered to impact interpretation of results. The variability between the primary and triplicate results is inferred to be the result of slight differences in analytical methods employed by the two laboratories. This is demonstrated through the laboratory duplicate results all being within acceptable limits.

Date Analysis Commenced : 13-Oct-2022
Issue Date : 24-Oct-2022 09:32

Accreditation No. 825
 Accredited for compliance with
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
[REDACTED]	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X: Particular samples (ET2205248), LOR has been raised due to the high moisture content
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X: Poor matrix spike recovery for sample ET2205248-040 due to sample matrix interference. Confirmed by re-analysis.
- EP231X: Sample ET2205248-028 required dilution due to matrix interferences. LOR values have been adjusted accordingly.
- Amendment (19/10/2022): This report has been amended following the request for updated Sampling date for sample 035.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Sampler : [Redacted]
Site : QLD_0874
Quote number : TV/007/21 v2 - Compass
No. of samples received : 54
No. of samples analysed : 54

Page : 1 of 10
Laboratory : Environmental Division Townsville
Contact : [Redacted]
Address : [Redacted]
Telephone : [Redacted]
Date Samples Received : 11-Oct-2022
Date Analysis Commenced : 13-Oct-2022
Issue Date : 24-Oct-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes redacted names and roles like Non-Metals Team Leader and Senior Organic Chemist.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries

Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	38	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	16	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	16	6.25	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- ***SRN Reissued 19/10/2022: To acknowledge request for updated Sampling date.**
- **14/10/2022: SRN has been resent to acknowledge the changes in sample dates/times as per email from [REDACTED]. For any further information regarding these adjustments please contact client services at [REDACTED].**
- **14/10/2022: SRN 2 has been resent to acknowledge the sample name change and time change for sample ET2205248-029. For any further information regarding these adjustments please contact client services at [REDACTED].**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **EP231X (PFAS) and EP231X (Solids) analysis will be conducted by ALS Environmental, Melbourne, NATA accreditation No. 825, Site No. 13778.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Proactive Holding Time Report

Sample(s) have been received within the recommended holding times for the requested analysis.

CERTIFICATE OF ANALYSIS

Work Order : ET2205356
Client : AECOM AUSTRALIA PTY LTD
Contact : [Redacted]
Address : [Redacted]
Telephone : [Redacted]
Project : QLD_0874_PFASOMP
Order number : 60612487_2.1
C-O-C number : 43496
Sampler : [Redacted]
Site : QLD_0874_PFASOMP
Quote number : TV/007/21 v2 - Compass
No. of samples received : 72
No. of samples analysed : 72

Page : 1 of 33
Laboratory : Environmental Division Townsville
Contact : [Redacted]
Address : [Redacted]
Telephone : [Redacted]
Date Samples Received : 14-Oct-2022 08:40
Date Analysis Commenced : 17-Oct-2022
Issue Date : 04-Nov-2022 17:14

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
• Analytical Results
• Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], 2IC Organic Chemist, Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: The LOR values of particular analytes for particular samples have been raised due to matrix interferences.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Telephone :
Date Samples Received : 14-Oct-2022
Date Analysis Commenced : 17-Oct-2022
Issue Date : 04-Nov-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], 2IC Organic Chemist, Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: WATER

Laboratory sample ID	Sample ID	Method: Compound	CAS Number	Matrix Spike (MS) Report			
				Spike Concentration	Spike Recovery(%)	Acceptable Limits (%)	
					MS	Low	High
EP231A: Perfluoroalkyl Sulfonic Acids (QCLot: 4653174)

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Matrix: WATER

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✘ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	80	3.75	10.00	✘	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

No. of samples received / analysed : 72 / 72

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
*Samples were originally received by ALS Townsville on 13/10/2022, and forwarded to ALS Brisbane for analysis.
*SRN Reissued 19/10/2022: To acknowledge request for updated sampling dates, and updated Sample ID.
Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
Please direct any turn around / technical queries to the laboratory contact designated above.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
An extra sample was received labelled as "MW033" (ALS # 72) and has been placed on hold. If testing is required on this sample, please contact ALS Client Services at
All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis.
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- No sample container / preservation non-compliance exists.

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order : ET2205495
Client : AECOM AUSTRALIA PTY LTD
Contact :
Address :
Telephone :
Project : QLD_0874_PFASOMP
Order number : 60612487_2.1
C-O-C number : 43667
Sampler :
Site : 0874_PFAS OMP_RAAF
Quote number : TV/007/21 v2 - Compass
No. of samples received : 62
No. of samples analysed : 62

Page : 1 of 29
Laboratory : Environmental Division Townsville
Contact :
Address :
Telephone :
Date Samples Received : 21-Oct-2022 09:40
Date Analysis Commenced : 24-Oct-2022
Issue Date : 04-Nov-2022 14:19

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes Senior Inorganic Chemist and Assistant Laboratory Manager.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: The LOR of particular analytes have been raised due to sample matrix interferences.
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. Surrogate recovery has not been determined and LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR values of particular analytes for particular samples have been raised due to matrix interferences.
- EP231X-(PFAS): The limit of reporting of Sample '0874_MW219_221019' (ET2205495-062) has been raised due to sample matrix interference need dilution .
- EP231X-(PFAS): High LCS recovery deemed acceptable as all associated analyte results are less than limit of reporting.
- EP231X PFAS: Sample '0874_SD102_221017' (ET2205495-021) shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Date Samples Received : 21-Oct-2022
Date Analysis Commenced : 24-Oct-2022
Issue Date : 04-Nov-2022

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes Senior Inorganic Chemist and Assistant Laboratory Manager.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Matrix Spike outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Laboratory Control outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for **VOC in soils** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	4	38	10.53	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	39	10.26	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	39	5.13	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QC Level : NEPM 2013 B3 & ALS QC Standard

Dates

Date Samples Received : 21-Oct-2022 09:40
Client Requested Due Date : 01-Nov-2022
Issue Date : 27-Oct-2022
Scheduled Reporting Date : 01-Nov-2022

Delivery Details

Mode of Delivery : Carrier
No. of coolers/boxes : 2
Receipt Detail : HARD ESKIES
Security Seal : Intact.
Temperature : 3.4°C, 3.9°C - Ice present
No. of samples received / analysed : 62 / 62

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- Samples were originally received by ALS Townsville on 19/10/2022 at temperatures of 7.7°C and 11.0°C, and forwarded to ALS Brisbane for analysis.**
- Please be advised, 2x 20mL PFAS containers were received labelled with the sample ID “MW219” and sampling date “19/10/2022” and did not scan into ALS Compass. These containers have been added as a sample to the end of the work order and placed on hold. If you wish to add analysis to this sample, please contact client services at [REDACTED]**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- All remaining analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

REPORT OF ANALYSIS

Page: 3 of 18
Report No. RN1370689

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects. δ
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW

REPORT OF ANALYSIS

Page: 9 of 18
Report No. RN1370689

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.^δ
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Organics - NSW
Accreditation No. 198

31-OCT-2022

SAMPLE RECEIVED CONDITION

Date samples received:	21-OCT-2022
Sample received in good order:	Yes
NMI Quotation no. provided:	RAAF TSV
Client purchase order number:	60612487_2_1
Temperature of samples:	Chilled
Comments:	
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at

<https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD
	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample '0874_SD014_221212' shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Samples '0874_SD125_221212' and '0874_QC150_221212' required dilution due to the presence of high level contaminants. Surrogate recoveries not determined and LOR values have been adjusted accordingly.
- Amendment (19/01/2023): This report has been amended following the amendment of the report recipients and Project name.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Date Analysis Commenced : 16-Dec-2022
Issue Date : 19-Jan-2023

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes Senior Chemist - Organics and Senior Inorganic Chemist.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

QA/QC Compliance Assessment to assist with Quality Review

Work Order : **EB2237659**

Page : 1 of 5

Amendment : **1**

Client : **AECOM AUSTRALIA PTY LTD**

Laboratory : Environmental Division Brisbane

Contact : [REDACTED]

Telephone : [REDACTED]

Project : **QLD_0874_PFASOMP**

Date Samples Received : 15-Dec-2022

Site : **RAAF TSV**

Issue Date : 19-Jan-2023

Sampler : [REDACTED]

No. of samples received : 7

Order number : 60612487

No. of samples analysed : 7

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231D: (n:2) Fluorotelomer Sulfonic Acids	EB2237659--001	0874_SD014_221212	10:2 Fluorotelomer sulfonic acid (10:2 FTS)	120226-60-0	48.8 %	70.0-130%	Recovery less than lower data quality objective

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	8	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	8	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
Analytical Methods							
Laboratory Duplicates (DUP)							
Moisture Content	EA055	1	5	20.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	5	20.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	5	20.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	5	20.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIVED CONDITION

Date samples received: 13-DEC-2022

Sample received in good order: Yes

NMI Quotation no. provided:

Client purchase order number: 60612487

Temperature of samples: Chilled

Comments: Corrected sample ID as per your Email

Mode of Delivery: Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at <https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

N22/025282

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.δ

REPORT OF ANALYSIS

Page: 6 of 6
Report No. RN1379140

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects. δ
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N > 10.

Analyst

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) was engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) outlined in the PFAS Management Area Plan (PMAP) (Defence, 2020) at RAAF Base Townsville (the 'Base') located in the North Queensland Region. The Monitoring Area (which includes areas on-Base and off-Base), location of the Base and the Sub-Management Areas are shown in **Figure 1, Appendix A**.

The OMP for Townsville (Defence, 2020) includes the biannual groundwater, surface water, and sediment sampling events in April and October 2020, April and October 2021, April and October 2022, April and October 2023 and April 2024.

These biannual sampling events include:

- A gauging round completed on 29 wells to measure depth to water for generation of groundwater contours.
- Groundwater sampling of 60 monitoring wells on-Base and 47 wells off-Base.
- Sediment sampling at 15 locations on-Base with co-located surface water sampling when water is present.
- Sediment sampling at 27 locations off-Base with co-located surface water sampling when water is present.

During the delivery of the biannual sampling event for April 2023, a rainfall event-based sampling round was triggered in response to 50 mm of rainfall recorded at Townsville Aero (station 032040) by the Bureau of Meteorology (BoM) or 100 mm of cumulative rainfall over a 7-day period. This includes the collection of surface water samples at 19 locations, daily, for a period of five consecutive days, limited to one event per calendar year.

A sampling and analysis quality plan (SAQP) (AECOM, 2023) provides details of the sampling events.

This Sampling Event Factual Report has been prepared to report the results of the 2023 Wet Season Sampling Event which was completed between April and May 2023 and the rainfall event-based sampling event which was completed in April 2023. This report specifically highlights first-time detections and/or new exceedances of human health and ecological screening criteria for perfluorooctane sulfonate (PFOS) + Perfluorohexane sulfonate (PFHxS) and/or perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Report Guidance*, v0.2, May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PMAP (Defence, 2020); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, and transport of PFAS at the Base.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS to protect human health and the environment, including updates and revisions to the PMAP.

The objective of this phase of works is to implement the 2023 Wet Season and Rainfall Event Sampling scope of works in accordance with the latest version of the SAQP (AECOM, 2023).

2.0 Scope of Work

The sampling event was completed in general accordance with the SAQP (AECOM, 2023). In summary, the scope of works for this sampling event included:

- Review of the SAQP (AECOM, 2023) prior to the monitoring event to ensure compliance with the following:
 - PFAS National Environmental Management Plan (NEMP), version 2.0 (HEPA, 2020)
 - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013)
 - Defence Routine Environment Water Quality Monitoring Manual (Defence, 2019b)
 - AS/NZ 5667:1998 Water quality – Sampling
 - Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, 2018)
 - Relevant State regulatory guidelines.
- Obtaining permission to work in public spaces where some groundwater sampling locations are situated.
- Gauging of the nominated 29 groundwater monitoring wells across a 24-hour period to enable groundwater contour generation (refer to **Table T1**, **Appendix B** and **Figure 4**, **Appendix A**).
- Collection of groundwater samples from the locations nominated in the SAQP for the wet season sampling event. Of the 107 locations proposed to be sampled (AECOM, 2023), 105 sample locations (59 on-Base and 46 off-Base) were sampled (refer to **Table 1** and **Figure 2**, **Appendix A**). One monitoring well on-Base and one monitoring well off-Base could not be sampled. MW013, located in Sub-Management Area 1 (SMA 1), was unable to be located due to construction works and was therefore not accessible. Additionally, the bolts securing the lid of MW258 were damaged, preventing access to this well. SWL was measured in all wells immediately prior to sampling.
- Collection of co-located surface water and sediment samples for the wet season sampling event. Of the 42 locations proposed to be sampled for the wet season sampling event (AECOM, 2023), 40 locations (14 on-Base and 26 off-Base) were sampled (refer to **Table 2** and **Table 3**, and **Figure 3**, **Appendix A**). One location on-Base and one location off-Base could not be sampled. Surface water and sediment co-locations SW/SD106 and SW/SD209 were inaccessible due to flooded roadways, therefore, samples from these locations were not collected.
- Collection of rainfall event-based surface water samples at 19 locations (nine on-Base and 10 off-Base), daily, for five consecutive days (refer to **Table 4** and **Figure 7**, **Appendix A**). All rainfall event locations were accessed and sampled for five consecutive days as per AECOM (2023).
- Analysis of all samples for the PFAS suite (28 analytes) at the standard limit of reporting (LOR).
- Collection of intra- and inter-laboratory duplicate samples at a rate of 1 in 10 primary samples to be analysed for PFAS suite, one rinsate sample per fieldwork day, and one trip blank per batch was not achieved due to oversight as outlined in the Data Validation in **Appendix C**.
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of this combined Wet Season and Rainfall Event Sampling Factual Report.

Table 1 Groundwater Sampling Locations

Area	Monitoring Well ID
On-Base	
SMA 1 – includes a Former Fire Training Area.	MW013#, MW118
SMA 2 – includes a Former Fire Training Area, Fire Station and Fuel Farm.	MW005, MW015, MW016, MW021, MW046, MW054, MW055, MW081, MW090, MW109, MW110, MW138, MW139, MW246, MW250, MW251
SMA 3 – includes 5th Aviation Regiment Precinct.	MW009, MW038, MW043, MW114, MW125, MW142, MW247, MW248
Northern section of Base, downgradient of SMA 2	MW136, MW140, MW243, MW244
North-west of Runway 07/25	MW112
East and south-east of SMA 1	MW026, MW033, MW034, MW061, MW063, MW120, MW222, MW223, MW224, MW232
South of Ingham Road – External Defence Properties (ID 0875, 1273, 1274)	MW226, MW227, MW228, MW229
Balance of Base area	MW002, MW004, MW056, MW057, MW122, MW135, MW234, MW235, MW241, MW242, MW245, MW255, MW265, MW300, MW470
Off-Base	
Townsville Town Common, north of the Base	MW201, MW202, MW203, MW204, MW205, MW206, MW207, MW208
Bohle River and Bohle Industrial Estate, west of the Base	MW231, MW237, MW238, MW239, MW240, MW254, MW262
Suburb of Pallarenda, north-east of the Base	MW233, MW252, MW253, MW301
Suburbs of Rowes Bay and Belgian Gardens, east of the Base	MW211, MW212, MW213, MW214, MW215, MW216, MW256, MW261, MW264, MW467, MW471
Suburb of Garbutt, east and south of the Base	MW217, MW218, MW219, MW220, MW221, MW225, MW236, MW257, MW258^, MW259, MW260, MW263, MW266, MW267, MW268, MW269, MW270

Location unable to be sampled due to construction activities in SMA 1

^ Location unable to be sampled due to damaged bolt/gatic lid

Table 2 Surface Water Sampling Locations

Locations	Surface Water Location ID	
On-Base	Mundy Creek Catchment	SW001, SW010, SW106^, SW121, SW132

	Bohle River / Louisa Creek / Townsville Town Common	SW017, SW127, SW129

3.0 Methodology

The methodology used for the 2023 Wet Season and Rainfall Event Sampling was in general accordance with the SAQP (AECOM, 2023) and is summarised in **Sections 3.1-3.7**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 5** below.

Table 5 Groundwater Sampling Methodology

Item	Details
Groundwater Gauging	The depth to groundwater was measured in the monitoring wells using an interface probe. The depth to groundwater was also measured in each monitoring well immediately prior to the collection of groundwater samples. The data are presented in Tables T1 and T2 in Appendix B .
Water Quality Parameters	Field parameters are collected ex situ post-sampling using water from the HydraSleeve™. Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded using a calibrated water quality meter (WQM). The results are presented in Table T2, Appendix B . Equipment calibration certificates for the WQM are provided in Appendix F .
Sampling Methodology	Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round (as detailed in Table T2, Appendix B). For wells without available construction details, HydraSleeves™ were installed at the bottom of the well, consistent with the screened interval for wells installed in the same aquifer. HydraSleeves™ were not redeployed.

3.2 Surface Water Sampling Methodology

The surface water sampling methodology is outlined in **Table 6** below.

Table 6 Surface Water Sampling Methodology

Item	Details
Water Quality Parameters	Field parameters were collected ex situ post-sampling using water from the stainless-steel scoop. Temperature, EC, DO, ORP, pH and observations of water quality were recorded using a calibrated WQM (results detailed in Table T4, Appendix B).
Sampling Methodology	Samples were collected from immediately below the water surface with a sampling pole to minimise collection of sediment or floating materials in the samples. At each location, a decontaminated stainless-steel scoop was used to collect the sample. The sample was immediately transferred into laboratory supplied containers.

3.3 Sediment Sampling Methodology

The sediment sampling methodology is outlined in **Table 7** below.

Table 7 Sediment Sampling Methodology

Item	Details
Sampling Methodology	Samples representative of potentially deposited sediments were collected from within the water body (if possible) using a trowel from the base of drains (where possible). Samples were collected from the surface of the sediment up to a depth of 0.1 m, where this depth was achievable. At each location, a new laboratory supplied container was used for each sample.
Logging	Sediment characteristics were recorded for each sample and are summarised in Table T6, Appendix B .

3.4 Quality Assurance/Quality Control and Analysis

The Quality Assurance/Quality Control (QA/QC) requirements and analysis completed for the OMP sampling event are summarised in **Table 8**, below.

Table 8 QA/QC and Analysis for OMP

Item	Details
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e., splits), trip blank samples and rinsate samples. Intra- and inter-laboratory samples were collected at a rate of one per ten primary samples. Trip blanks were prepared in the laboratory by filling sampling containers with laboratory supplied PFAS-free deionised water and were included with three batches throughout the program (EB2311298, ET2302407 and 986709). This did not meet the expected frequency of one per batch of samples submitted to the laboratory. Rinsate samples were collected at a rate of one per day of sampling when non-dedicated equipment was used by pouring laboratory supplied PFAS-free deionised water over the decontaminated sampling equipment. Refer to Appendix C for assessment of QA/QC sample data.
Sample Analysis	All primary samples were submitted for PFAS suite analysis using the standard levels of detection. Australian Laboratory Services (ALS) Environmental Pty Ltd Brisbane, Queensland was used as the primary laboratory. Eurofins of Brisbane, QLD was used as the secondary laboratory. ALS and Eurofins methods for analyses of PFAS in are certified by the National Association of Testing Authorities (NATA). Chain of custody forms are presented in Appendix D . Laboratory certificates are presented in Appendix E .

3.5 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS NEMP, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset include the following:

- PFAS NEMP, version 2.0 (HEPA 2020).
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. October 2017 [updated September 2019].
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2023), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 9** below.

Table 9 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking Water	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). Where the guideline value refers to the sum of PFOS + PFHxS, this includes PFOS only, PFHxS only and the sum of the two (HEPA, 2020). <i>All off-Base groundwater results will be compared to these criteria.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water results will be compared to these criteria.</i>
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater and marine water (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). <i>All surface water and groundwater results will be compared to these criteria.</i>
	PFOA	220 µg/L	

There are no endorsed human health or ecological guideline values available for sediment.

3.6 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2023). Data validation assessment is provided in **Appendix C**. Data validation procedures employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that although some minor non-conformances are present, the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) (Defence, 2018 as amended 2021) Annex L requirements.

3.7 Deviations from the SAQP

Table 10 lists the deviations from the SAQP (AECOM, 2023) during the 2023 Wet Season Sampling Event. There were no deviations from the SAQP during the April 2023 Rainfall Sampling Event.

Table 10 Deviations from the SAQP during 2023 Wet Season Sampling Event

SAQP	2023 Wet Season Sampling Event	Impact of Deviation
Gauge and Sample MW013	MW013 was unable to be sampled due to construction works being completed in SMA 1 restricting access to this location.	Minimal impact – adjacent location MW120 was substituted as an alternative to MW013 for the gauging round and for the generation of groundwater contours. MW118 remains within the northern portion of SMA1 and was able to be accessed and sampled to obtain a representative groundwater sample down-gradient of SMA1. Locations immediately south and east of SMA1 (MW033, MW034, MW063 and MW120) were accessed and sampled providing up- and cross-gradient information.
Sample MW258	MW258 was unable to be sampled due to a damaged gatic cover bolt preventing access to the well.	Minimal impact – MW225, MW257 and MW259 are in the vicinity of MW258, and were accessed and sampled providing adequate coverage of the area.
Collect co-located surface water and sediment samples at SW/SD106 and SW/SD209	SW/SD106 and SW/SD209 were inaccessible due to flooded road conditions.	Minimal impact – locations have been historically sampled and will be resampled in the dry season of 2023.
Water quality parameters recorded for every location sampled	One of the WQMs did not have a turbidity probe so this parameter was not recorded for 31 groundwater locations. Syncing errors resulted in the loss of data for an additional 2 groundwater and 2 surface water locations.	WQM is not used for assessment against guidelines and therefore there is minimal impact.
Trip Blank submitted to Laboratory with each batch	Trip blanks were included with three batches throughout the program (EB2311298, ET2302407 [two trip blanks were submitted for this batch] and 986709). This did not meet the expected frequency of one per batch of samples submitted to the laboratory.	Minor non-conformance. The overall quality of the analytical data produced is acceptably reliable for the purpose of this report.
Rainfall event sampling	Integration of rain event and wet season surface water sampling events.	No impact on data set. Data has been combined for both sampling events for the purpose of this report.

4.0 Field Observations and Results

The 2023 Wet Season Sampling Event was completed between 11 April and 4 May 2023. Groundwater gauging and deployment of HydraSleeves™ was conducted at the beginning of the sampling round.

Rainfall event sampling was completed between 17 April 2023 and 22 April 2023. Due to time constraints on the first day of rainfall sampling (17 April 2023), on-Base location SW121, and off-Base locations SW108, SW109, SW115, SW116, SW117, SW118 and SW129 were sampled for five consecutive days from 18 April 2023.

The results are summarised in the following sections.

Details on weather conditions and estate management works or training activities during the sampling event and access are recorded in **Table 11**.

Table 11 Weather Conditions and Estate Activities at Time of Sampling

Item	Observations
Weather Conditions	<p>Weather was overcast and humid during the sampling program. The temperature ranged between 23.2 °C and 31.0 °C in April 2023 and 17.4 °C and 28.5 °C in May 2023.</p> <p>A summary of the rainfall recorded since the Dry Season 2022 monitoring round and during the Wet Season Sampling Event includes:</p> <ul style="list-style-type: none"> • October 2022: 41.6 mm • November 2022: 293.2 mm • December 2022: 72.6 mm • January 2023: 410.6 mm • February 2023: 306.8 mm • March 2023: 88.0 mm • April 2023: 111.8 mm (rainfall sampling event triggered on 17 April 2023 with 65.4mm recorded at Townsville Aero (station 032040)) • 1 – 4 May 2023: 6.4 mm
Estate Management Works or Training Activities	<p>SMA 1 was undergoing remediation activities which prevented access to monitoring well location MW013.</p>

The results of the sampling event are summarised in **Sections 4.1-4.3**.

4.1 Groundwater

4.1.1 Observations and Field Measurements

Table 12 Groundwater Observations and Field Measurements

Item	Observations								
Access	All monitoring wells were accessible, with the exception of the following: <ul style="list-style-type: none"> MW013; construction works within SMA 1. MW258; damaged/bent bolt lodged in gatic. 								
Monitoring Well Network	All accessible monitoring wells were noted to be in good condition.								
Depth to Groundwater	<p>Selected wells were gauged to ascertain groundwater flow direction. For the gauging event undertaken over a 24-hour period between 27 and 28 April 2023 (presented in Table T1, Appendix B), depth to groundwater ranged between 0.508 (MW135) and 2.646 (MW214) mBTC. Groundwater elevations were between 1.017 (MW214) and 4.803 (MW236) mAHD. Groundwater was present at the top of the casing at location MW002 and was therefore removed from consideration of the gauging data set. Groundwater contours are presented on Figure 4, Appendix A.</p> <p>For the entire Wet Season 2023 dataset, depth to groundwater ranged between 0.074 (MW248) and 7.590 (MW261) metres below top of casing (mBTC). Groundwater elevations were between 0.317 (MW231) and 8.908 (MW261) metres Australian Height Datum (mAHD) during the sampling round. Groundwater gauging data are presented in Tables T1 and T2, Appendix B.</p>								
Field Observations	<p>Groundwater samples were found to be typically odour and sheen free, with the exception of the following samples.</p> <table border="1"> <thead> <tr> <th>Observation</th> <th>Affected wells</th> </tr> </thead> <tbody> <tr> <td>Sulfurous odour</td> <td>MW004, MW043, MW057, MW061, MW112, MW118, MW125, MW203, MW232, MW244</td> </tr> <tr> <td>Organic odour</td> <td>MW002, MW204, MW205, MW206, MW208, MW213, MW221, MW222, MW226, MW266, MW267, MW268</td> </tr> <tr> <td>Biosheen</td> <td>MW002</td> </tr> </tbody> </table> <p>Groundwater colour was typically recorded as light grey to light brown, with low to medium turbidity.</p> <p>No visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells.</p> <p>Field observations are presented Table T2, Appendix B.</p>	Observation	Affected wells	Sulfurous odour	MW004, MW043, MW057, MW061, MW112, MW118, MW125, MW203, MW232, MW244	Organic odour	MW002, MW204, MW205, MW206, MW208, MW213, MW221, MW222, MW226, MW266, MW267, MW268	Biosheen	MW002
Observation	Affected wells

Biosheen	MW002								
Groundwater Flow Direction	<p>Groundwater contours and inferred groundwater flow directions for the gauging event undertaken within a 24-hour period between 27 and 28 April 2023 are shown on Figure 4, Appendix A.</p> <p>Consistent with historical groundwater data, the inferred local groundwater flow direction in the central and northern portions of the Base is to the north-north-west, towards the Town Common. Groundwater elevations in northern portions of the Base are flat. Flow in north-eastern portion is towards north-east and Cleveland Bay. There appears to be localised mounding of groundwater in the south-eastern corner of the Base, with radial groundwater flow to the north, north-east and north-west. Groundwater flow off-Base to the east, towards Cleveland Bay, is flat.</p>								
Water Quality Parameters	Groundwater quality parameters were measured at the time of sampling. The readings are presented in Table T2, Appendix B and are summarised below, covering the main sampling event completed in April 2023:								

Item	Observations
	<ul style="list-style-type: none"> • DO results ranged from 0.58 mg/L (MW267) to 6.91 mg/L (MW470) indicating poor to well oxygenated conditions. • EC ranged from 11.8 µS/cm (MW233) to 138,829 µS/cm (MW203) indicating fresh to saline conditions. • pH ranged from 4.06 (MW207) to 8.14 (MW033). pH results generally indicated acidic to slightly alkaline conditions. • ORP ranged from 20.1 mV (MW267) to 449.9 mV (MW015) indicating mildly to strongly reducing conditions. • Temperature ranged from 23.3°C (MW239) to 34.2°C (MW016). <p>One of the WQM did not have a turbidity probe so this parameter was not recorded for 31 groundwater locations. Water colour observations have been used as a turbidity indicator in these instances. Syncing errors resulted in the loss of field data for two groundwater samples (MW269 and MW218).</p>

4.1.2 Groundwater Analytical Results

Of the 105 groundwater wells sampled during the 2023 Wet Season Sampling Event, 92 samples reported concentrations of PFAS above the laboratory LOR. The PFAS groundwater analytical results from this sampling event are presented in **Table T3, Appendix B**.

One new exceedance of the ecological guideline for PFOS was recorded at MW262. The location of this well is off-Base to the west presented in **Figure 6, Appendix A**.

There were no first-time detections of PFOS, PFOA or PFHxS in any samples during the groundwater sampling event.

Historical groundwater results are presented in **Table T8, Appendix B**. Groundwater results from this sampling event were compared to the historical range of samples collected at each location, with the following locations reporting new historical maximum concentrations for:

- PFOS, PFOA and sum of PFOS+PFHxS at MW009, MW138, MW212, MW262
- PFOS and PFOA at MW218 and MW300
- PFOS and sum of PFOS+PFHxS at MW061, MW215, MW224
- PFOS at MW109, MW265
- PFOA at MW256.

Groundwater sampling results were generally within the same order of magnitude as historically reported concentrations, with the exception of MW138, MW215, MW218, MW262 and MW300, which reported concentrations of PFOS, or PFOA and/or sum of PFOS+PFHxS one order of magnitude (or higher) than historical results.

4.2 Surface Water

The 2023 rainfall sampling event was triggered during the planned 2023 wet season sampling event. As such, for each of the locations included in the rainfall sampling event the field observations and analytical results for the first sample collected were also included in the wet season sampling event dataset.

4.2.1 Observations and Field Measurements

Table 13 Surface Water Observations and Field Measurements

Item	Observations
Access	All surface water locations were accessible during the sampling event, with the exception of SW106 and SW209, due to flooded road conditions.

Item	Observations
Wet Season Field Observations	<p>All surface water locations were found to be odour free, with the exception of SW113 (slight organic odour) and SW107 (sulfurous odour). Surface water colour was recorded as light olive brown with clear to low turbidity. No sheen was noted at any of the wet season surface water locations.</p> <p>No other visible or olfactory indications of note were observed during the sampling of the surface water locations.</p> <p>Field observations are presented Table T4, Appendix B.</p>
Rain Event Field Observations	<p>All rainfall event surface water locations were found to be odour and sheen free, with the exception of the following.</p> <p>An organic odour was noted at the following rainfall surface water locations and date ranges:</p> <ul style="list-style-type: none"> • SW010: 18 April 2023 • SW016: 17 to 21 April 2023 • SW116: 21 April 2023 • SW118: 21 April 2023 • SW121: 18 April 2023, 21 April to 22 April 2023 • SW125: 18 April 2023 • SW131: 17 April, 20 April 2023 and 21 April 2023 <p>A biosheen was noted at the following rainfall surface water locations and date ranges:</p> <ul style="list-style-type: none"> • SW016: 17 to 20 April 2023 • SW102: 18 April 2023 • SW121: 18 April 2023, 20 April to 22 April 2023 • SW127: 20 April to 22 April 2023 <p>Formed foam was observed at the discharge point of the concrete lined drain at SW127 on 17 April 2023.</p> <p>Field observations are presented in Table T4, Appendix B.</p>
Wet Season Water Quality Parameters	<p><u>Wet Season Sampling Event</u></p> <p>Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T4, Appendix B and are summarised below, covering the main sampling event completed in April 2023.</p> <ul style="list-style-type: none"> • DO results ranged between 4.17 mg/L (SW205) and 10.58 mg/L (SW201), indicating well oxygenated conditions. • EC ranged from 1,527 µS/cm (SW201) to 50,466 µS/cm (SW204), indicating brackish to saline conditions. • pH ranged from 6.50 (SW114) to 7.95 (SW111), indicating slightly acidic to slightly alkaline conditions. • ORP ranged from 180.5 mV (SW107) to 373.1 mV (SW110), indicating moderately to strongly reducing conditions. • Temperature ranged from 26.5°C (SW110) to 33.3°C (SW202). <p>Syncing errors resulted in the loss of data for 2 surface water locations (SW019 and SW119).</p>
Rain Event Water Quality Parameters	<p><u>Rain Event Sampling Event</u></p> <p>Surface water quality parameters were measured at the time of sampling. Readings are presented in Table T4, Appendix B and are summarised below, covering the rain event sampling completed in April 2023.</p> <ul style="list-style-type: none"> • DO results ranged between 1.33 mg/L (SW016) and 14.5 mg/L (SW132), indicating well oxygenated conditions. • EC ranged from 1 µS/cm (SW131) to 43,090 µS/cm (SW109), indicating fresh to saline conditions.

Item	Observations
	<ul style="list-style-type: none"> pH ranged from 5.86 (SW016) to 9.38 (SW125), indicating slightly acidic to slightly alkaline conditions. ORP ranged from 47.2 mV (SW016) to 404.3 mV (SW127), indicating moderately to strongly reducing conditions. Temperature ranged from 24.7°C (SW127) to 36°C (SW125).

4.2.2 PFAS Surface Water Analytical Results

Of the 21 surface water samples collected during the 2023 Wet Season Sampling Event, 20 samples reported concentrations of PFAS above the laboratory LOR. The PFAS surface water analytical results from this sampling event are presented in **Table T5, Appendix B**.

Two new exceedances were recorded at SW021 (PFOS) and SW107 (PFOS+PFHxS), locations shown on **Figure 6, Appendix A**.

Historical surface water results are presented in **Table T9, Appendix B**. Surface water results from this sampling event were compared to the historical range of samples collected at each location, with the following locations reporting new historical maximum concentrations for PFOS, PFOA and/or Sum of PFOS+PFHxS; SW021, SW107, SW114 and SW210.

Surface water sampling results were generally within the same order of magnitude as historically reported concentrations, with the exception of SW107, which reported one order of magnitude (or higher) than historical results.

4.2.3 PFAS Rainfall Event Surface Water Analytical Results

The PFAS rainfall event surface water analytical results presented in **Table T5, Appendix B**, specifically highlighting first-time detections and/or new exceedances of human health and ecological screening criteria PFOS+PFHxS, PFOS and/or PFOA.

Of the 95 rainfall event surface water samples analysed, 93 samples reported PFAS concentrations above the laboratory LOR. Four new exceedances of the recreational use guideline value for Sum of PFOS+PFHxS were recorded during the rainfall sampling event. These locations were SW010, SW108, SW109 and SW116 (see **Figure 6, Appendix A**).

Historical rainfall event surface water results are presented in **Table T9, Appendix B**. Rainfall surface water results from this sampling event were compared to the historical range of samples collected at each location, with the following locations reporting new historical maximum concentrations for PFOS, PFOA and/or Sum of PFOS+PFHxS; SW010, SW016, SW021, SW108, SW109, SW115, SW116, SW117, SW118, SW121, SW125, SW132.

Rainfall surface water sampling results were generally within the same order of magnitude as historically reported concentrations, with the exception of SW016, SW108, SW109 and SW125, which reported one order of magnitude (or higher) than historical results.

4.3 Sediment

4.3.1 Observations and Field Measurements

Table 14 Sediment Observations

Item	Observations
Access	All sediment locations were accessible during the sampling event, with the exception of SD106 and SD209, due to flooded road conditions.
Field Observations	No visible or olfactory indications of contamination were observed during the sampling of sediment locations. Organic odours were detected at sediment locations SD013, SD016, SD102, SD108, SD109, SD114, SD115, SD116, SD121, SD125, SD131, SD132 and SD210. Sediment logging and observation data are presented in Table T6, Appendix B .

4.3.2 PFAS Sediment Analytical Results

There are no endorsed human health or ecological guideline values available for sediment.

Of the 40 sediment samples collected, 37 samples reported concentrations of PFAS above the laboratory LOR. The PFAS sediment analytical results from this sampling event are presented in **Table T7, Appendix B**.

Three first-time detections of PFOA in off-Base sediment samples were reported from SD108 (0.0002 mg/kg), SD204 (0.0002 mg/kg) and SD206 (0.0003 mg/kg) as shown in **Figure 5**. As all the concentrations are at, or marginally above the LOR, they are potentially false positives. There were no first-time detections of PFOS or Sum of PFOS+PFHxS in any samples during this sampling event. The PFAS sediment analytical results from this sampling event are presented in **Table T7, Appendix B**.

Historical sediment results are presented in **Table T10, Appendix B**. Sediment results from this sampling event were compared to the historical range of samples collected at each location, with the following locations reporting new historical maximum concentrations for PFOS, PFOA and/or Sum of PFOS+PFHxS; SD010, SD016, SD107, SD108, SD125, SD131, SD132, SD203, SD204, SD206.

Sediment sampling results were generally within the same order of magnitude as historically reported concentrations, with the exception of SD016, SD125 and SD132, which reported one order of magnitude (or higher) than historical results.

5.0 Summary and Next Sampling Event

5.1 Summary of Sampling Event

The 2023 Wet Season and Rainfall Sampling Events were undertaken between 11 April and 4 May 2023, and included sampling from:

- 105 groundwater monitoring locations;
- 40 co-located surface water and sediment monitoring locations; and
- 19 rainfall event-based surface water locations sampled for a period of five consecutive days.

The wet season sampling event and rainfall sampling events were combined for the purposes of this report.

Table 15 summarises the findings of the sampling event and the recommended actions.

Table 15 Summary of Sampling Event

Item	Comment	Recommended Actions
<p><u>Groundwater:</u> Access to sampling locations and monitoring well network condition.</p>	<ul style="list-style-type: none"> • All monitoring wells were accessible, with the exception of MW013 (construction works within SMA 1) and MW258 (damaged/bent bolt lodged in gatic). 	<ul style="list-style-type: none"> • Access to MW013 will be reinspected during the October 2023 sampling event. • Repair of damaged MW258 to allow future access.
<p><u>Sediment/Surface Water:</u> Access to sampling locations</p>	<ul style="list-style-type: none"> • All co-located surface water and sediment locations were accessible, with the exception of SW/SD106 and SW/SD209, due to flooded road conditions. • All 19 rainfall event-based surface water locations were accessed daily for five consecutive days from 17 April to 22 April 2023. 	<ul style="list-style-type: none"> • Assess access to SW/SD106 and SW/SD209 during next sampling event.
<p><u>Analytical Results</u></p>	<p><u>2023 Wet Season Sampling Event:</u> PFAS were detected above laboratory LOR in:</p> <ul style="list-style-type: none"> • 92 of 105 groundwater samples • 20 of 21 surface water samples • 37 of 40 sediment samples <p><u>April 2023 Rainfall Sampling Event:</u> PFAS were detected above laboratory LOR in 93 of 95 rainfall event-based surface water samples.</p>	<p>Ongoing monitoring in accordance with the OMP.</p>
<p><u>First-time detections of PFOS, PFOA or Sum of PFOS+PFHxS</u></p>	<ul style="list-style-type: none"> • Three first-time detections of PFOA in sediment; SD108, SD204 and SD206. 	<p>Ongoing monitoring in accordance with the OMP.</p>
<p><u>New exceedances of screening criteria for PFOS, PFOA or Sum of PFOS+PFHxS</u></p>	<ul style="list-style-type: none"> • One new exceedance of the NEMP (2020) Freshwater and Interim Marine 95% screening criteria for PFOS in groundwater (MW262) • Two new exceedances of screening criteria for surface water; SW021 (PFOS) and SW107 (Sum of PFOS+PFHxS) • Four new exceedances of screening criteria for Sum of PFOS+PFHxS rainfall event surface water; SW010, SW108, SW109 and SW116. 	<p>Ongoing monitoring in accordance with the OMP.</p>

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for October 2023.

5.3 Upcoming Ongoing Monitoring Interpretive Report

The next Ongoing Monitoring Interpretive Report is scheduled for October 2023.

NA - Well construction details are not available in ESdat for some wells
 mbtoc - metres below top of casing
 TOC - top of casing
 mAHD - metres above Australian Height Datum
 DO - Dissolved Oxygen
 EC - Electrical Conductivity
 Redox - Reduction Oxidation Potential
 Temp - Temperature
 mg/L - milligrams per litre
 µS/cm - Microsiemens per centimetre
 mV - millivolt
 °C - degrees Celsius
 "-" denotes no data recorded/data lost

T6: Sediment Observations

Property ID	Location ID	Sample Date	Sample Description	Odour
On-Base				
Bohle River/Louisa Creek/Town Common				
0874	SD013	20/04/2023	Silty SAND, loose, black, fine subangular grained, black fine silt, saturated. Wetland grass/organic matter present.	Organic
0874	SD014	21/04/2023	CLAY, light brown, medium plasticity, firm, subangular gravel, saturated. Moss/roots present.	No odour
0874	SD016	21/04/2023	SILT, loose, black, trace yellow sands, coarse, subangular, saturated. Wetland grass present.	Strong Organic
0874	SD019	21/04/2023	CLAY, light grey, medium plasticity, trace coarse sands, saturated. Snails present.	No odour
0874	SD112	21/04/2023	CLAY, light grey, medium plasticity, firm, saturated. Grass/roots present.	No odour
0874	SD123	21/04/2023	CLAY, light grey, medium plasticity, subangular pebbles	No odour
0874	SD125	21/04/2023	Sandy CLAY, dark grey, low plasticity, trace coarse sands, saturated. Algae present.	Moderate Organic
0874	SD126	20/04/2023	Silty SAND, loose, brown, fine subangular grained, fine silt, saturated. Wetland grass/organic matter present.	No odour
0874	SD131	21/04/2023	CLAY, dark grey, high plasticity, firm, saturated. Wetland grass present.	Moderate Organic
Mundy Creek				
0874	SD001	20/04/2023	Silty SAND, loose, yellow, coarse subangular grained, black fine silt, saturated. Algae/roots present.	No odour
0874	SD010	21/04/2023	Silty SAND, loose, yellow, coarse subangular, dark brown, fine, saturated. Grass/Roots present.	No odour
0874	SD121	21/04/2023	SILT, loose, black, saturated. Grass present.	Weak Organic
0874	SD132	21/04/2023	CLAY, medium plasticity, dark brown, loose, saturated. Roots present.	Weak Organic
Three Mile Creek				
0874	SD102	21/04/2023	SILT, loose, black, saturated. Roots/Grass present.	Weak Organic
Off-Base				
Bohle River/Louisa Creek/Town Common				
0874	SD017	21/04/2023	Silty SAND, loose, yellow, coarse grained, dark brown silt, saturated. Grass/Roots present.	No odour
0874	SD021	3/05/2023	Sandy CLAY, very soft, dark grey, low plasticity, fine grained sand, saturated. Root matter present.	No odour
0874	SD110	3/05/2023	Silty CLAY, very soft, black, low, plasticity, saturated. Organic matter leaves/branches present.	No odour
0874	SD111	3/05/2023	Silty CLAY, very soft, black, low, plasticity, saturated. Organic matter leaves/branches present.	No odour
0874	SD120	3/05/2023	Clayey SAND, very loose, dark grey, fine to medium subangular grained, saturated	No odour
0874	SD127	21/04/2023	SAND, black, loose, coarse, subangular pebbles, saturated	No odour
0874	SD129	21/04/2023	CLAY, loose, dark brown, low plasticity, saturated	No odour
0874	SD201	3/05/2023	SAND, very loose, brown, fine to coarse grained, subangular, saturated	No odour
0874	SD202	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
0874	SD203	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
0874	SD204	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
0874	SD205	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
0874	SD206	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
0874	SD207	11/04/2023	CLAY, soft, grey, with small to medium sized subangular grained sand, moist	No odour
Mundy Creek				
0874	SD108	21/04/2023	SILT, black, loose, saturated, coarse yellow sands, trace Leaves/Grass present.	Strong Organic
0874	SD109	21/04/2023	Sandy CLAY, dark grey/black, medium plasticity, firm, yellow coarse sands, saturated. Shells present.	Moderate Organic
0874	SD113	3/05/2023	Silty CLAY, very soft, black, low, plasticity, saturated. Organic matter leaves/branches present.	No odour
0874	SD114	22/04/2023	CLAY, dark brown/black, high plasticity, firm, saturated. Leaves/Roots present.	Moderate Organic
0874	SD115	21/04/2023	CLAY, dark brown/black, medium plasticity, saturated, loose. Roots/Leaves present.	Moderate Organic
0874	SD116	21/04/2023	SAND, black, coarse, loose, saturated, subangular pebble inclusions. Roots present.	Moderate Organic
0874	SD117	21/04/2023	SILT, loose, dark brown, saturated. Leaves/Roots present.	No odour
0874	SD118	21/04/2023	CLAY, light grey, moderate plasticity, saturated, loose. Grass present.	No odour
0874	SD119	22/04/2023	SAND, dark brown, coarse, loose, subangular pebble inclusions, saturated. Leaves present.	No odour
0874	SD208	22/04/2023	SAND, light brown/yellow, coarse, subangular pebble inclusions, saturated. Shells present.	No odour
Three Mile Creek				
0874	SD107	3/05/2023	Silty CLAY, very soft, black, low, plasticity, saturated. Organic matter leaves/branches present.	No odour
0874	SD210	22/04/2023	CLAY, light grey/black, firm, high plasticity, saturated	Slight Organic
