Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2143536**	Page	: 1 of 13
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 30-Nov-2021
Site	: NSW_0902	Issue Date	: 07-Dec-2021
Sampler	: ANDREW SPOOR, AYRTON DONEGAN	No. of samples received	: 53
Order number	: 60612562_5.1	No. of samples analysed	: 51

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	Evaluation	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	20	10.00	10.00	✓	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	6	58	10.34	10.00	✓	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	58	5.17	5.00	✓	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA seal method 2 017-1-L
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

ALS Environmental

CERTIFICATE OF ANALYSIS

Work Order	: **ES2145705**	Page	: 1 of 11
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Christopher Redford
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 14-Dec-2021 14:30
Order number	: 60612562_5.1	Date Analysis Commenced	: 15-Dec-2021
C-O-C number	: 30346	Issue Date	: 22-Dec-2021 11:43
Sampler	: ANDREW SPOOR, AYRTON DONEGAN		
Site	: Private Property		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 6		
No. of samples analysed	: 6		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231:Poor matrix spike recovery due to sample matrix interferences.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Christopher Redford
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 14-Dec-2021
Order number	: 60612562_5.1	Date Analysis Commenced	: 15-Dec-2021
C-O-C number	: 30346	Issue Date	: 22-Dec-2021
Sampler	: ANDREW SPOOR, AYRTON DONEGAN		
Site	: Private Property		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 6		
No. of samples analysed	: 6		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2145705**	Page	: 1 of 5
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 14-Dec-2021
Site	: Private Property	Issue Date	: 22-Dec-2021
Sampler	: ANDREW SPOOR, AYRTON DONEGAN	No. of samples received	: 6
Order number	: 60612562_5.1	No. of samples analysed	: 6

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Additional Info

Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt. Requests for longer term sample storage must be received in writing.
Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.
TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

Moisture	%	62	63	50

Method ID	Methodology Summary
Inorg-006	Alkalinity - determined titrimetrically in accordance with APHA latest edition, 2320-B.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-026	Fluoride determined by ion selective electrode (ISE) in accordance with APHA latest edition, 4500-F-C.
Inorg-040	The concentrations of the major ions (mg/L) are converted to milliequivalents and summed. The ionic balance should be within +/- 10% ie total anions = total cations +/-10%.
Inorg-055	Nitrate - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a water extraction.
Inorg-055	Nitrite - determined colourimetrically based on APHA latest edition NO2- B. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a water extraction.
Inorg-057	Ammonia - determined colourimetrically, based on APHA latest edition 4500-NH3 F. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a KCl extraction.
Inorg-081	Anions - a range of Anions are determined by Ion Chromatography, in accordance with APHA latest edition, 4110-B. Waters samples are filtered on receipt prior to analysis. Alternatively determined by colourimetry/turbidity using Discrete Analyser.
Metals-020	Determination of various metals by ICP-AES.
Metals-022	Determination of various metals by ICP-MS.
Org-029	Soil samples are extracted with basified Methanol. Waters and soil extracts are directly injected and/or concentrated/extracted using SPE. TCLPs/ASLP leachates are centrifuged, the supernatant is then analysed (including amendment with solvent) - as per the option in AS4439.3. Analysis is undertaken with LC-MS/MS. PFAS results include the sum of branched and linear isomers where applicable. Please note that PFAS results are corrected for Extracted Internal Standards (QSM 5.3 Table B-15 terminology), which are mass labelled analytes added prior to sample preparation to assess matrix effects and verify processing of the sample. PFAS analytes without a commercially available mass labelled analogue are corrected vs a closely eluting mass labelled PFAS compound. Surrogates are also reported, in this context they are mass labelled PFAS compounds added prior to extraction but are used as monitoring compounds only (not used for result correction). Envicarb (or similar) is used discretionally to remove interfering matrix components. Please contact the laboratory if estimates of Measurement Uncertainty are required as per WA DER.

<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

Report Comments

Total metals: no unfiltered, preserved sample was received, therefore analysis was conducted from the unpreserved sample bottle.
Note: there is a possibility some elements may be underestimated.

Nutrients
Samples were out of the recommended holding time for this analysis.

For PFAS Extracted Internal Standards denoted with # or outside the 50-150% acceptance range, the respective target analyte results may be unaffected, in other circumstances the PQL has been raised to accommodate the outlier(s).

PFAS_S: ## Percent recovery is not applicable due to the high concentration of the analytes in the sample. However an acceptable recovery was obtained for the LCS.

CERTIFICATE OF ANALYSIS 285371

Client Details

Client	AECOM Australia Pty Ltd (Sydney)
Attention	Catherine Hansen
Address	PO Box Q410, QVB Post Office, Sydney, NSW, 1230

Sample Details

Your Reference	**60612562 - 5.1, NSW_0902_PFASOMP**
Number of Samples	1 water
Date samples received	14/12/2021
Date completed instructions received	14/12/2021

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date results requested by	21/12/2021

Method ID	Methodology Summary
Org-029	Soil samples are extracted with basified Methanol. Waters and soil extracts are directly injected and/or concentrated/extracted using SPE. TCLPs/ASLP leachates are centrifuged, the supernatant is then analysed (including amendment with solvent) - as per the option in AS4439.3. Analysis is undertaken with LC-MS/MS. PFAS results include the sum of branched and linear isomers where applicable. Please note that PFAS results are corrected for Extracted Internal Standards (QSM 5.3 Table B-15 terminology), which are mass labelled analytes added prior to sample preparation to assess matrix effects and verify processing of the sample. PFAS analytes without a commercially available mass labelled analogue are corrected vs a closely eluting mass labelled PFAS compound. Surrogates are also reported, in this context they are mass labelled PFAS compounds added prior to extraction but are used as monitoring compounds only (not used for result correction). Envicarb (or similar) is used discretionally to remove interfering matrix components. Please contact the laboratory if estimates of Measurement Uncertainty are required as per WA DER.

NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) at the RAAF Base Richmond (the 'Site') in the NSW and Jervis Bay Region. The location of the Site and Management Areas are shown in **Figure F1** in **Appendix A**.

The OMP (Defence, 2019a) for the Site outlines the requirement to complete biannual groundwater, surface water and sediment sampling.

Following each sampling event, a sampling event factual report is prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This Sampling Event Factual Report has been prepared to report the results of the biannual sampling event completed in May 2022 specifically highlighting first time detections and/or new exceedances of human health and/or ecological screening criteria for Perfluorooctanesulfonic acid (PFOS) + Perfluorohexanesulfonic acid (PFHxS) and/or Perfluorooctanoic acid (PFOA).

This reported has been prepared in accordance with the Defence *PFAS OMP Factual Report Guidance,* Version 0.2 dated May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP program are to:

- implement the OMP (Defence, 2019a) prepared as part of the Detailed Environmental Investigations; and
- collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, transport and transformation of PFAS within the Management Areas.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PFAS Management Area Plan (PMAP) (Defence, 2019b).

The objective of this phase of the project is to implement the scope of works for the May 2022 sampling event in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2022).

2.0 Scope of Work

2.1 Summary of Scope

The biannual sampling event was completed in general accordance with the SAQP (AECOM, 2022). In summary, the scope of works completed included:

- obtaining permission (where required) to conduct works at the Site, off-site publicly accessible areas and privately owned properties
- gauging of groundwater levels in 80 monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure F2** in **Appendix A** for specific locations). It is noted gauging data from 10 planned monitoring locations could not be collected during this sampling event (refer to **Table 4** for more details)
- collection of groundwater samples from 80 existing monitoring wells using either HydraSleeves™ or dedicated, disposable bailers (refer to **Table 1** below, and **Figure F2** in **Appendix A** for specific locations). It is noted that samples from 10 monitoring locations could not be collected during this sampling event (refer to **Table 4** for more details)
- collection of 21 surface water samples (refer to **Table 2** below, and **Figure F3** in **Appendix A** for specific locations). It is noted that surface water samples from two locations could not be collected during this sampling event (refer to **Table 4** for further details)
- collection of 20 sediment samples (refer to **Table 3** below, and **Figure F4** in **Appendix A** for specific locations). It is noted that a sediment sample from two locations could not be collected during this sampling event (refer to **Table 4** for further details)
- collection of field duplicate samples at a rate of 1 in 10 primary samples and collecting one rinsate sample per fieldwork day
- analysis of samples for the following:
  - all samples for the PFAS suite at the standard limit of reporting (LOR).
  - 20% of groundwater and surface water samples for nutrients (ammonia, nitrate, nitrite, phosphorous) and selected metals (aluminium, bromide, iron and manganese)
- data management of the OMP field and laboratory data in Defence ESdat database
- preparation of this Sampling Event Factual Report.

2.2 Planned Monitoring Locations

The monitoring locations outlined within the SAQP (AECOM, 2022) for the planned biannual groundwater, surface water and sediment sampling event is outlined in **Table 1**, **Table 2** and **Table 3** below.

Table 1 Groundwater Sampling Locations

Area	Description	Sampling Locations	Number of wells/ bores	Total
On-Site	West of Site (including Airfield Former Fire Ground/Training Ground)	MW008, MW009, MW010, MW040, MW041, MW117*, MW118*, MW119*	8	74 Locations
	Airfield Foam Cannon Testing Area and Surrounds	MW030, MW053, MW054, MW056, MW057, MW058*, MW059, MW107D, MW107I, MW108	10	
	Airfield Flight Line (including Fire Station, Building 291)	MW007, MW024, MW025, MW026, MW027, MW028, MW042, MW043	8	

Area	Description	Sampling Locations	Number of wells/ bores	Total
	Site Infrastructure (including Hangar 54)	MW044*, MW045*, MW046, MW060, MW061, MW062, MW063, MW064, MW065, MW066, MW067, MW068, MW069, MW070, MW071	15	
	East of Site (including Tanker Parking Area and Former Fuel Farm 1)	MW047, MW048, MW050, MW051, MW052, MW072, MW073, MW074	8	
	Sewage Treatment Plant and Surrounds	MW020, MW021, MW022, MW023, MW036, MW109, MW110	7	
	Fuel Farm 2	MW032, MW033, MW034	3	
	Rickabys Drop Zone	MW001, MW002, MW004, MW005, MW012, MW013, MW014, MW015, MW016, MW017, MW095*, MW111, MW112, MW113, MW114	15	
Off-Site	West of Site	MW075, MW076, MW077, MW078, MW081	5	16 Locations
	North west of Site	MW079, MW080, MW082, MW106, MW120*, MW121*	6	
	North east of Site	MW097, MW098	2	
	East of Site	MW086*, MW091, MW092	3	

Note: *Location not sampled. Refer to **Table 4** for further details

Table 2 Surface Water Sampling Locations

Area	Description	Sampling Locations	Number of Locations	Total
On-Site	North west of Site (including STP discharge point)	SW001, SW002, SW003, SW037	4	11 Locations
	North east of Site (including tributary of Rickabys Creek)	SW005, SW007, SW014	3	
	East of Site (including Rickabys Creek)	SW008, SW009, SW011, SW013	4	
Off-Site	West of Site	SW022, SW024, SW035	3	12 Locations
	North of Site	SW015, SW016, SW032*, SW081*	4	
	East of Site	SW018, SW019, SW023, SW030	4	
	South of Site	SW020	1	

Note: *Location not sampled. Refer to **Table 4** for further details

Table 3 Sediment Sampling Locations

Area	Description	Sampling Locations	Number of Locations	Total
On-Site	North west of Site (including STP discharge point)	SD001, SD002, SD003	3	10 Locations
	North east of Site (including tributary of Rickabys Creek)	SD005, SD007, SD014	3	
	East of Site (including Rickabys Creek)	SD008, SD009, SD011, SD013	4	
Off-Site	West of Site	SD022, SD024, SD035	3	12 Locations
	North of Site	SD015, SD016, SD032*, SD081*	4	
	East of Site	SD018, SD019, SD023, SD030	4	
	South of Site	SD020	1	

Note: *Location not sampled. Refer to **Table 4** for further details

3.0 Deviations from the SAQP

The May 2022 sampling event was completed in general accordance with the SAQP (AECOM, 2022) with the exception of the deviations outlined in **Table 4** below.

Table 4 Deviations from SAQP (AECOM, 2022)

SAQP	May 2022 Sampling Event
90 groundwater locations are identified to be gauged and sampled as part of the biannual sampling event	Monitoring wells MW044 and MW045 (located on-site) appear to have been covered over with new turf and therefore were not able to be located and sampled. Given the close proximity of on-site monitoring well MW046, the existing monitoring well network is considered sufficient to provide coverage of this area and the lack of sampling data from these wells do not present a significant data gap. AECOM will attempt to locate these monitoring wells using a metal detector during the next scheduled OMP event. The monument of monitoring well MW058 (located on-site) appears to have been hit by a vehicle which has resulted in the casing being bent at ground level and therefore the well was not able to be accessed for sampling. Given the close proximity of on-site monitoring well MW107D, MW107I and MW057, Given that the existing groundwater monitoring well network in this area provides sufficient coverage, the lack of sampling data from this well does not present a significant data gap. AECOM will repair the casing for this monitoring well ahead of the next scheduled OMP event. Monitoring well MW086 was buried under a stockpile of material and therefore was not able to be accessed for sampling. Given the close proximity of on-site monitoring well MW048, the existing groundwater monitoring well network is considered sufficient to provide coverage of this area and the lack of sampling data from this well does not present a significant data gap. Monitoring well MW095 is considered likely to have been destroyed during the March 2022 floods as no evidence of the well was observed during the current sampling event. Given the presence of down-hydraulic gradient monitoring wells MW091 and MW092 (located between the Site and the Hawkesbury River) the existing groundwater monitoring well network is considered sufficient to provide coverage of this area and the lack of sampling data from this well does not present a significant data gap. Monitoring wells MW117, MW118 and MW119 (located on-site, airside) were compromised by surface water ingress in 2021. AECOM received direction from Defence (correspondence dated 24 May 2022) to not sample these wells during the OMP event as they will no longer be used for remediation performance monitoring purposes. Given that these wells are no longer part of the OMP scope, the lack of sampling data does not present a data gap. Monitoring wells MW120 and MW121 (on private property) were not accessed for sampling as the landowner denied access to the property for the sampling to occur. The lack of groundwater data at this location presents a potential data gap in assessing the off-site extent of PFAS in groundwater to the north of the Site.
23 surface water locations are identified to be sampled as part of the biannual sampling event	AECOM was unable collect a sample from proposed surface water location SW081 as the road was closed due to rectification works following the damage the road sustained during significant flood events in March 2021 and March 2022. Concentrations of PFAS in

SAQP	May 2022 Sampling Event
	surface water at this location remain a data gap as this location has not been sampled previously. AECOM will attempt to collect a sample from the location again during the next scheduled OMP sampling event in November 2022. AECOM was unable collect a sample from proposed surface water location SW032 (private property) as the landowner denied access to the property for the sampling to occur. The lack of sampling data from this location presents a potential data gap for assessing PFAS concentrations in Bakers Lagoon.
20% of groundwater and surface water samples for nutrients (ammonia, nitrate, nitrite, phosphorous) and selected metals (aluminium, bromide, iron and manganese)	As MW095 and SW032 were not able to be sampled, only 19% of groundwater and surface water samples were analysed for the expanded suite, rather than the target 20%. Given that the actual rate was only marginally lower than the target rate of 20%, AECOM considers that the data collected are sufficiently representative for the purposes of the OMP.
22 sediment locations are identified to be sampled as part of the biannual sampling event	AECOM was unable collect a sample from proposed surface water location SD081 as the road was closed due to rectification works following the damage sustained during significant flood events in March 2021 and March 2022. Concentrations of PFAS in surface water at this location remain a data gap as this location has not been sampled previously. AECOM will attempt to collect a sample from the location again during the next scheduled OMP sampling event in November 2022. AECOM was unable collect a sample from proposed sediment location SD032 (residential) as the landowner denied access to the property for the sampling to occur. The lack of sampling data from this location presents a potential data gap for assessing PFAS concentrations in Bakers Lagoon.
Collection of gauging and geochemical parameter data at each groundwater location	Due to the opportunistic nature of the groundwater sampling undertaken on 16 June 2022, no gauging or geochemical parameter data was collected during the sampling of monitoring well MW080. The lack of gauging and geochemical data for location MW080 is not considered to impact upon the objectives of the OMP.

4.0 Methodology

4.1 Sampling Methodology

The methodology adopted for the May 2022 biannual sampling event was in general accordance with the SAQP (AECOM, 2022) and summarised in **Table 5** below:

Table 5 Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater (in metres below top of casing [mbtoc]) was measured in each monitoring well immediately prior to collection of groundwater samples using an interface probe, with the exception of the ten monitoring wells outlined in **Table 4**.
Field parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for all groundwater and surface water samples with the exception of those locations unable to be accessed or sampled as discussed in **Table 4**. Field parameters were collected using a calibrated water quality meter (WQM), with equipment supplier and field calibration records provided in **Appendix C**.
Sampling methodology	**Groundwater:** The groundwater samples were collected from the majority of monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of the wells greater than 24hrs prior to the sampling round. Installation depths were based on a review of the well construction logs. Once sampling was completed, new HydraSleeves™ were deployed in the majority of monitoring wells at the screened interval depth in preparation for the next sampling round. Groundwater samples at MW009, MW010, MW012, MW041, MW053, MW057, MW059, MW007, MW047, MW050, MW051, MW052, MW072, MW073, MW020, MW032, MW033, MW005 and MW078 were collected using dedicated disposable bailers as HydraSleeves™ were either not present (removed prior to the OMP event by non-AECOM personnel) or did not deploy appropriately. **Surface Water:** The surface water samples were collected by lowering a laboratory supplied container below the water surface to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory supplied container was lowered into the water with the cap immediately applied once the container was full. **Sediment:** The sediment samples were collected using a trowel from the base of the drain. At each location, a new laboratory supplied container was used to collect the sample. The trowel was decontaminated between sampling locations using a PFAS-free detergent (Liquinox®) followed by a double rinse with laboratory supplied de-ionised, PFAS free water.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e., splits) and rinsate samples. Refer to **Appendix D** for assessment of QA/QC sample data.
Sample analysis	Samples were submitted to the primary and secondary laboratories for analysis detailed in **Section 2.0**. ALS Environmental (ALS) Sydney, NSW was used as the primary laboratory. The Envirolab of Sydney, NSW was used as the secondary laboratory. ALS and Envirolab methods for analyses were certified by the National Association of Testing Authorities (NATA). Laboratory certificates are presented in **Appendix E**.

4.2 Adopted Screening Criteria

Adopted screening criteria reference national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset includes the following:

- PFAS National Environmental Management Plan 2.0 (NEMP), (HEPA 2020) (https://www.environment.gov.au/protection/publications/pfas-nemp-2)
- Department of Health (DoH), 2017. Health Based Guidance Values for PFAS for use in site investigations in Australia. April 2017 (FSANZ 2017).
- National Health and Medical Research Council (NHMRC), 2019. Guidance on PFAS in Recreational Water. August 2019 (NHMRC 2019).
- National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM).

The adopted screening criteria are presented in **Table 6** below.

Table 6 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment/Reference
Human Health Receptors			
Drinking water - groundwater	PFOS + PFHxS	0.07 µg/L	The values presented in the PFAS NEMP, 2020 are from DoH 2017, which published final health-based guidance values for PFAS for use in site investigations in Australia. DoH utilised the TDI for PFOS and PFOA from FSANZ, 2017 and the methodology described in Chapter 6.3.3 of the National Health and Medical Research Council's (NHMRC) Australian Drinking Water Guidelines (ADWG), 2022 to determine drinking water values. For PFHxS, DoH 2017 noted that '*FSANZ concluded that there was not enough toxicological and epidemiological information to justify establishing a tolerable daily intake. However, as a precaution, and for the purposes of site investigations, the PFOS tolerable daily intake should apply to PFHxS. In practice, this means that the level of PFHxS exposure should be added to the level of PFOS exposure; and this combined level be compared to the tolerable daily intake for PFOS*'. *All groundwater samples were screened against these criteria*
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	In August 2019, NHMRC released guidance on the assessment of PFAS in surface water. Rather than adopting an ingestion rate of 0.2 L of water per day (as per the ADWG formula), NHMRC adjusted this rate with consideration of an event frequency (150 events/year) to calculate an annual ingestion rate of 30 L per year. *All surface water samples were screened against these criteria*
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater (99% species protection values)	PFOS	0.00023 µg/L	The values are from the PFAS NEMP, 2020 which endorsed the Australian and New Zealand Guidelines for Fresh and Marine Water Quality – draft default guideline values. AECOM understands that these guidelines are currently being reviewed and will consider the appropriateness of considering any future revision. The 99% level of protection has been applied for slightly to moderately disturbed ecosystems. This approach is generally adopted for chemicals that bioaccumulate and biomagnify in wildlife. For the purposes of preliminary screening of analytical water results, the laboratory LOR will be adopted rather than sole use of the criteria value. *All groundwater and surface water samples were screened against these criteria*
	PFOA	19 µg/L	

4.3 Data Quality Objectives and Data Validation

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).

The data validation assessment is provided in **Appendix D**.

Data validation employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event have been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements.

5.0 Field Observations and Results

5.1 General Field Observations

The field observations noted during the sampling event are summarised in **Table 7** below.

Table 7 General Field Observations

Items	Observations
Weather Conditions	During the May 2022 sampling event, the weather in general was observed to be mostly sunny to overcast with cool temperatures. A maximum daily temperature of 22.3°C was recorded on Thursday 26 May 2022. 1.2 mm of rainfall was recorded between 24 and 27 May 2022 and 2.6 mm was recorded between 30 and 31 May 2022 at RAAF Base Richmond (Richmond RAAF NSW, 067105) (Bureau of Meteorology, 2022). 0 mm of rainfall was recorded on 16 June 2022. It is noted that a significant flood event occurred across the wider Hawkesbury Catchment in March 2022, preceding the May 2022 fieldworks, during which a number of monitoring wells located in the low-lying areas of the Richmond Lowlands and Rickabys Creek were likely to have been submerged by flood waters. Additionally, considerable flood debris was observed within Rickabys Drop Zone during the OMP sampling event in May 2022 confirming that a significant flood event occurred prior to the OMP event.
Estate Management Works or Training Activities	During the sampling event, the following notable estate works were observed in the vicinity of the sampling locations: • plant redevelopment being completed at the Sewage Treatment Plant, involving an infrastructure upgrade to the settlement ponds. The works were being undertaken by Baseline Projects. No training activities were observed in the vicinity of the sampling locations during the event.

5.2 Groundwater Observations and Results

5.2.1 Groundwater Observations and Field Measurements

Groundwater observations and field measurements recorded during the sampling event are presented in **Table 8** below.

Table 8 Groundwater Observations and Field Measurements

Compound	Criteria
Fieldwork Dates	The majority of groundwater sampling was completed between 24 and 31 May 2022. On 16 June 2022, AECOM remobilised to the Site to complete activities outside of the scope of the works for the OMP. During this mobilisation, the field team were able to opportunistically locate and sample monitoring well MW080, which was not located during the initial mobilisation in May 2022
Access and Sample Collection	All monitoring wells and bores were accessible and able to be sampled with the exception of the ten locations detailed in **Table 4**.
Monitoring Well Network Condition	All monitoring wells that were sampled appeared to be in good condition with the exception of the following: • monitoring well MW012 was observed to have been damaged, likely during the March 2022 flood event, with the well casing pinched at ground level preventing the deployment of HydraSleeves™. This sample was collected using a dedicated disposable bailer • monitoring wells MW044 and MW045 appeared to have been covered over with new turf and could not be located or sampled • monitoring well MW051 was observed to be missing a well cap and monument cover lid. This sample was collected using a dedicated disposable bailer • monitoring well MW052 was observed to be missing a well cap. This sample was collected using a dedicated disposable bailer • monitoring well MW058 appeared to have been struck by a vehicle and the PVC casing was observed to have pinched at ground level, preventing access and sampling • monitoring well MW086 was buried beneath a stockpile of material and could not be accessed for sampling • monitoring well MW095 could not be located and is likely to have been destroyed during the March 2022 significant flood event • the stabilised water level within MW098 was observed to be at the ground surface and the J cap was not secured properly. These observations suggest that the integrity of the monitoring well may be compromised with potential surface water ingress.
Contamination Observations	No visible indications of contamination were observed during the sampling.

Compound	Criteria
Depth to Groundwater and flow direction	Excluding monitoring wells MW012, MW051 and MW098 (which are likely to have been subject to surface water ingress) the depth to groundwater ranged from 0.02 (MW013) and 16.501 (MW054) m btoc. The measured groundwater elevations ranged between 4.560 (MW092) and 16.268 (MW071) metres Australian Height Datum (m AHD). Groundwater gauging data is presented in **Table T1** in **Appendix B**. Groundwater elevations (in m AHD) were noted to be generally higher (by up to 1.5 m above historical elevations) in the majority of monitoring wells gauged. This is attributed to the higher than average rainfall events over the previous 12 months, resulting in an increase in groundwater levels and significant flooding in the Hawkesbury valley (in March 2022). Inferred groundwater contours and groundwater flow directions at the site and Management Areas in May 2022 are shown on **Figure F5** in **Appendix A**. The inferred local groundwater flow direction for the regional shallow (unconfined) aquifer is to the north, east and northeast towards the Hawkesbury River, which is generally consistent with the DSI (AECOM, 2018) and flow directions observed during previous PFAS OMP monitoring events.
Geochemical Parameters	Groundwater geochemical parameters were measured prior to collecting groundwater samples. The stabilised readings are presented in **Table T1** in **Appendix B**, and are summarised below: • dissolved oxygen ranged from 0.45 mg/L (MW064) to 6.51 mg/L (MW005) indicating poorly to well oxygenated conditions • electrical conductivity ranged from 81.6 µS/cm (MW043) to 8,922 µS/cm (MW111) indicating fresh to brackish conditions • pH ranged from 5.92 (MW056) to 7.76 (MW052) indicating slightly acidic to near neutral conditions • corrected Redox ranged from 135 mV (MW051) to 420.5 mV (MW059) indicating reducing conditions.

5.2.2 PFAS Groundwater Analytical Results

The PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**. In summary:

- PFAS compounds were reported at concentrations above the laboratory LOR in 73 of the 80 primary groundwater samples analysed
- Concentrations of PFOS+PFHxS and/or PFOA exceeded the adopted human health criteria in 63 of the primary groundwater samples analysed
- Concentrations of PFOS and/or PFOA exceeded the adopted ecological screening criteria in 64 of the primary groundwater samples analysed.

Deviations from the historical dataset are provided in **Table 9** below and graphically on **Figure F6** in **Appendix A**.

Table 9 Deviations from Historical Groundwater Dataset

Deviation Type	Location ID	PFOS+PFHxS concentration (µg/L)		PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		May 2022	Historical maximum	May 2022	Historical maximum	May 2022	Historical maximum
First time detections of PFOS+PFHxS and/or PFOA in groundwater	MW007	There were no first-time detections in the dataset.		0.01	<0.01	There were no first-time detections in the dataset.	
	MW016	0.01	<0.01	0.01	<0.01	There were no first-time detections in the dataset.	
First time exceedance of the NEMP (HEPA, 2020) drinking water guidelines	MW081	**0.1**	0.07	There were no new exceedances of Human Health screening criteria in the dataset		There were no new exceedances of Human Health screening criteria in the dataset	
	MW091	**0.09**	0.07	There were no new exceedances of Human Health screening criteria in the dataset		There were no new exceedances of Human Health screening criteria in the dataset	
First time exceedance of the NEMP (HEPA, 2020) Freshwater 99% guidelines in groundwater	MW107I	There were no new exceedances of ecological screening criteria in the dataset		There were no new exceedances of ecological screening criteria in the dataset		32.4	1.24

Legend	
Bold	Bold text indicates existing detection or exceedance of NEMP Human Health Screening Criteria
Blue Shading	Blue shading indicates sampling location with first time detection of PFOS+PFHxS and/or PFOA
Yellow Shading	Yellow shading indicates sampling location with first time exceedance of NEMP Human Health Screening criteria and/or Ecological Screening criteria

5.2.3 Non-PFAS Groundwater Analytical Results

The non-PFAS groundwater analytical results from this sampling event are presented in **Table T2** in **Appendix B**, and are summarised below:

- Anions (total) ranged from 1.72 milliequivalents per litre (mEg/L) (MW091) to 39.7 meg/L (MW022)
- Cations (total) ranged from 2.07 mEq/L (MW091) to 38.6 mEq/L (MW022)
- Ammonia (as N) ranged from <LOR (MW091) to 130 µg/L) (MW022)
- Nitrate + Nitrite (as N) ranged from 0.02 mg/L (MW022) to 6.77 mg/L (MW091)
- Aluminium (filtered) was not detected above the laboratory LOR in the samples analysed
- Calcium (filtered) ranged from 14 mg/L (MW091) to 128 mg/L (MW022)
- Iron (filtered) ranged from below the LOR (MW091) to 1.96 mg/L (MW022)
- Magnesium (filtered) ranged from 6 mg/L (MW091) to 105 mg/L (MW022)
- Manganese (filtered) ranged from 0.009 mg/L (MW091) to 1.93 mg/L (MW081)

- Potassium (filtered) ranged from below the LOR (MW081) and 7 mg/L (MW091).

5.3 Surface Water Observations and Results

5.3.1 Surface Water Observations and Field Measurements

Surface water observations and field measurements recorded during the sampling event are presented in **Table 10** below.

Table 10 Surface Water Observations and Field Measurements

Compound	Criteria
Fieldwork Dates	The surface water sampling was completed between 24 and 31 May 2022.
Access and Sample Collection	All surface water sampling locations were accessible and able to be sampled with the exception of SW032 and SW081.
Contamination Observations	No obvious visible signs of contamination were observed.
Geochemical Parameters	Surface water geochemical parameters were measured prior to collecting surface water samples. The stabilised readings are presented in **Table T3** in **Appendix B**, and are summarised below: • dissolved oxygen ranged from 0.6 mg/L (SW014) to 10.38 mg/L (SW013) indicating relatively poorly oxygenated to well oxygenated conditions • electrical conductivity ranged from 118.2 µS/cm (SW024) to 1,559 µS/cm (SW015) indicating fresh to brackish conditions • pH ranged from 6.78 (SW014) to 8.07 (SW011) indicating slightly acidic to slightly alkaline conditions • corrected redox ranged from 216.5 mV (SW014) to 371.8 mV (SW023) indicating reducing conditions.

5.3.2 PFAS Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**.

In summary, PFAS compounds were reported at concentrations above the laboratory LOR in 19 of the 21 surface water samples analysed. Concentrations of PFOS+PFHxS and/or PFOA exceeded the adopted human health screening criteria in 6 of the 21 primary surface water samples analysed. Concentrations of PFOS and/or PFOA exceeded the adopted ecological screening criteria in 19 of the 21 primary surface water samples analysed.

Deviations from the historical dataset are provided in **Table 11** below and graphically on **Figure F7** in **Appendix A**.

Table 11 Deviations from Historical Surface Water Dataset

Deviation Type	Location ID	PFOS+PFHxS concentration (µg/L)		PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		May 2022	Historical maximum	Nov 2021	Historical maximum	May 2022	Historical maximum
First time detections of PFOS+PFHxS and/or PFOA	SW005	There were no first-time detections in the dataset.		There were no first-time detections in the dataset.		0.01	<0.01

Deviation Type	Location ID	PFOS+PFHxS concentration (µg/L)		PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		May 2022	Historical maximum	Nov 2021	Historical maximum	May 2022	Historical maximum
in surface water							
First time exceedance of the NEMP (HEPA, 2020) recreational use guidelines	There were no new exceedances of the NEMP Human Health Screening Criteria in the dataset.						
First time exceedance of the NEMP (HEPA, 2020) Freshwater 99% guidelines in surface water	There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset.

Blue Shading	Blue shading indicates sampling location with first time detection of PFOS+PFHxS and/or PFOA						
Yellow Shading	Yellow shading indicates sampling location with first time exceedance of NEMP Human Health Screening criteria and/or Ecological Screening criteria						

5.3.3 Non-PFAS Surface Water Analytical Results

The non-PFAS surface water analytical results from this sampling event are presented in **Table T4** in **Appendix B**, and are summarised below:

- Anions (total) ranged from 2.53 milliequivalents per litre (mEg/L) (SW003) to 21.8 meg/L (SW015)
- Cations (total) ranged from 2.5 mEq/L (SW003) to 20.4 mEq/L (SW015)
- Ammonia (as N) ranged from 100 µg/L (SW035) to 1280 µg/L (SW016)
- Nitrate + Nitrite (as N) ranged from 0.03 mg/L (SW035) to 1.48 mg/L (SW023)
- Aluminium (filtered) ranged from below the LOR (multiple) to 0.18 mg/L (SW020)
- Calcium (filtered) ranged from 16 mg/L (MW003) to 64 mg/L (SW015)
- Iron (filtered) ranged from below the LOR (SW015) to 1.47 mg/L (SW035)
- Magnesium (filtered) ranged from 6 mg/L (SW003) to 58 mg/L (SW015)
- Manganese (filtered) ranged from 0.167 mg/L (SW020) to 1.41 mg/L (SW016)
- Potassium (filtered) ranged from 3 mg/L (SW003) to 16 mg/L (SW016).

.

5.4 Sediment Observations and Results

5.4.1 Sediment Observations

Sediment observations recorded during the sampling event are presented in **Table 12** below.

Table 12 Sediment Observations

Compound	Criteria
Fieldwork Dates	The sediment sampling was completed between 24 and 31 May 2022.
Access and Sample Collection	All sediment sample locations were accessible and able to be sampled with the exception of SD032 and SD081.
Sediment observations	Sediments sampled during this monitoring event were variable comprising sand, silt, gravel and clay materials with minor inclusions of organic material (roots, grass and leaves) noted. No anthropogenic inclusions were noted. No staining was observed and no odours were noted. Refer to **Table T5** in **Appendix B** for a summary of sediment classifications and observations.

5.4.2 PFAS Sediment Analytical Results

The PFAS sediment analytical results from this sampling event are presented in **Table T6** in **Appendix B**. In summary, PFAS compounds were detected at concentrations above the laboratory LORs in 19 of the 20 primary sediment samples analysed.

Deviations from the historical dataset are provided in **Table 11** below and graphically on **Figure F8** in **Appendix A**.

Table 13 Deviations from Historical Sediment Dataset

Deviation Type	Location ID	PFOS+PFHxS concentration (mg/kg)		PFOS concentration (mg/kg)		PFOA concentration (mg/kg)	
		May 2022	Historical max	Nov 2021	Historical max	May 2022	Historical max
First time detections of PFOS+PFHxS and/or PFOA in surface water	SD024	0.0009	<0.0002	0.0009	<0.0002	There were no first-time detections in the dataset.	
Legend							
Blue Shading	Blue shading indicates sampling location with first time detection of PFOS+PFHxS and/or PFOA						

5.5 Historical Sampling Data

Historical groundwater, surface water and sediment sampling data are presented in **Tables T7**, **T8** and **T9** (respectively) in **Appendix B**.

6.0 Summary and Next Sampling Events

6.1 Summary of Monitoring Event

The biannual monitoring event was completed at the Site and publicly accessible land within the Management Areas between 24 and 31 May 2022 and 16 June 2022. The program included:

- groundwater gauging at 80 of 90 monitoring wells and bores. It is noted that 10 planned locations could not be gauged
- groundwater sampling at 80 of 90 monitoring wells and bores. It is noted that 10 planned locations could not be sampled
- surface water sampling at 21 of 23 planned locations. It is noted that two planned locations could not be sampled
- sediment sampling at 20 of 22 planned locations. It is noted that two planned sediment locations could not be sampled

Table 14 below summarises the findings of the May 2022 sampling event and the recommended actions.

Table 14 Summary of Sampling Event

Item	Comment	Recommended Actions
Access to sampling locations	The following were accessed and able to be sampled: • 80 out of 90 monitoring wells and bores • 21 out of 23 surface water locations • 20 out of 22 sediment locations	AECOM will attempt to access locations MW044, MW045, MW086, SW081 and SD081 during the next scheduled sampling event in November 2022. It is recommended that monitoring locations SW032, SD032, MW120 and MW121 be removed from the OMP scope of works due to access limitations. At the request of Defence, AECOM will remove the requirement to sample MW117, MW118 and MW119 from the OMP scope of works.
Monitoring well network condition	• monitoring well MW095 could not be located and is likely to have been destroyed • the well casing for monitoring wells MW012 and MW058 were observed to be damaged • monitoring wells MW051 and MW052 were observed to be missing well caps	AECOM recommends that MW095 be removed from the OMP scope of works as the existing monitoring well network provides sufficient coverage in this area. AECOM to repair well casings for MW012 and MW058 prior to next OMP sampling event AECOM to replace the well caps on MW051 and MW052 prior to next OMP sampling event
Analytical Results	PFAS were detected at concentrations above the laboratory LOR in 73 of the 80 groundwater samples, 19 of 21 surface water	No actions recommended.

Item	Comment	Recommended Actions
	samples and 19 of 20 sediment samples analysed.	
First time detection of PFOS+PFHxS and/or PFOA	PFOS was detected at concentrations above the laboratory LOR for the first time in monitoring wells MW007 and MW016 PFOA was detected at concentrations above the laboratory LOR for the first time in surface water sample SW005 PFOS was detected at concentrations above the laboratory LOR for the first time in sediment sample SD024	Monitoring locations will be sampled again during the November 2022 sampling event.
New exceedance of NEMP Human Health guideline values	Concentrations of PFOS+PFHxS exceeded the NEMP drinking water criteria for the first time in monitoring wells MW081 and MW091. No new exceendeces of the adopted human health screening criteria were reported in the surface water samples analysed.	Monitoring locations will be sampled again during the November 2022 sampling event.
New exceedance of NEMP ecological screening criteria	Concentrations of PFOA exceeded the NEMP ecological screening criteria for the first time in monitoring well MW107I. No new exceendeces of the adopted ecological screening criteria were reported in the surface water samples analysed.	Monitoring locations will be sampled again during the November 2022 sampling event.

6.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for November 2022.

6.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled to be delivered in Q4 2022.

Notes
mBTOC - Meters below top of casing
mAHD - Meters Australian height Datum
mV - miliVolts
mg/L - milligrams per Litre
oC - degrees Celsius
µS/cm - micro Siemens per centremetre
Corrected field Redox measurement (Eh [mV]) = Er [mV] + 205.8
TOC - Top of Casing
IP - Interface Probe

					Field					
					Dissolved Oxygen	Redox Er	Redox Eh (Corrected)	Temperature	Electric Conductivity	pH
					mg/L	mV	mV	oC	µS/cm	pH_Units
Location Code	**Alternative Name**	**Date**	**Location Description**	**SampleComments**						
SW001	SW001	24/05/2022	lower side of culvert running under road. 1m wide x 0.2m depth of water. No flow observed. Minor foaming observed of unknown origin. Vegetation is grasses and reeds.	Pale Yellow, no turbidity, no odour, no sheen	4.27	86.5	292.3	21.7	203	7.02
SW002	SW002	27/05/2022	small grated stream. 2 m wide, 15 cm depth of water. flow observed. small shrubs. sampled from just below grate.	Pale Yellow, no turbidity, no odour, no sheen	5.04	105.8	311.6	16.7	233.2	7.35
SW003	SW003	30/05/2022	Small drainage channel running past STP. 2m wide and approximately 1m depth of water. Small Shrubs and grasses. No flow observed.	Light olive brown, medium turbidity, no odour, biosheen appearance	1.67	127.9	333.7	14.4	335	6.96
SW005	SW005	26/05/2022	Creek. 4m wide. 0.5m deep. No flow observed. Shrubs on each side of creek.	Light brown, low turbidity, no odour, biosheen appearance	2.37	82	287.8	15.6	1496	7.56
SW007	SW007	26/05/2022	5m wide creek and approximately 1m depth of water. Slow flow observed, small Shrubs on creek beds. Storm water outlet 10m upstream.	Clear, low turbidity, no odour, no sheen	4.71	48.2	254	16.4	1504	7.31
SW008	SW008	26/05/2022	10m wide creek/pond and approximately 1m depth of water, no flow observed. Grasses and Shrubs along banks.	Clear, low turbidity, no odour, no sheen	3.26	54	259.8	17.9	1018	6.87
SW009	SW009	26/05/2022	Creek 10m wide and approximately 1m depth of water. Storm water drain leading into stream. Sampled from storm water drain area. Flow observed. Shrubs along creek banks.	Clear, low turbidity, no odour, no sheen	5.21	45.9	251.7	18.4	562	7.05
SW011	SW011	27/05/2022	Large drainage pond. Sampled from culvert area. No flow. Approx 30m x 30m and approximately 1m depth of water. Reeds and grasses along banks.	Light brown, no turbidity, no odour, no sheen	9.27	89.3	295.1	18.4	193.2	8.07
SW013	SW013	27/05/2022	Creek 25m wide and unknown depth of water. Grasses reeds and shrubs. No flow observed.	Light olive brown, low turbidity, no odour, biosheen appearance	10.38	135.4	341.2	19	778	7.66
SW014	SW014	26/05/2022	Water way, 3m wide and approximately 0.3m depth of water, no flow observed. Reeds and grasses.	Light brown, low turbidity, organic odour, no sheen	0.6	10.7	216.5	13.5	147	6.78
SW015	SW015	30/05/2022	5m wide drainage channel and approxmately 0.5m depth of water. Water full of reeds and grasses. No flow observed.	Light olive brown, low turbidity, no odour, no sheen	4.61	73.3	279.1	12.8	1559	7.45
SW016	SW016	31/05/2022	creek 4m wide and approximately 0.5m depth of water. No flow observed. Small Shrubs.	Olive yellow, medium turbidity, organic odour, biosheen appearance	3	101.4	307.2	13.6	572	7.13
SW018	SW018	31/05/2022	Hawkesbury River 20m wide and unknown depth of water. Flow observed. Grass and sand on banks.	Light olive brown, medium turbidity, no odour, no sheen	6.12	146.3	352.1	15.2	623	7.01
SW019	SW019	31/05/2022	Creek under bridge 3m wide and approximately 0.3m depth of water. No flow observed. Grasses and Shrubs on banks.	Light olive brown, medium turbidity, no odour, no sheen	5.92	151.5	357.3	11.8	627	7.36
SW020	SW020	31/05/2022	Large creek 15m wide and unknown depth of water. No flow observed. Steep bank with grasses	Light olive brown, low turbidity, no odour, no sheen	4.79	147.3	353.1	12.2	669	6.93
SW022	SW022	30/05/2022	4m wide drainage channel and approximately 0.5m depth of water. Flow observed. Grass on sides.	Light olive brown, low turbidity, no odour, no sheen	2.2	89.8	295.6	14.3	789	7.32
SW023	SW023	31/05/2022	Creek under bridge 5m wide and approximatley 0.3m depth of water. Flow observed. Little Vegetation.	Light olive brown, low turbidity, no odour, no sheen	5.58	166	371.8	12.3	726	6.96
SW024	SW024	31/05/2022	Hawkesbury River 50m wide and unknown depth of water. Flow observed. Sand and grasses on banks.	Light olive brown, no turbidity, no odour, no sheen	6.7	147.2	353	15.9	118.2	7.25
SW030	SW030	31/05/2022	Hawkesbury River 40m wide and unknown depth of water. Flow observed. Sand and grasses on banks.	Light olive brown, no turbidity, no odour, no sheen	6.25	137.1	342.9	16.7	127.3	7.14
SW035	SW035	30/05/2022	Sampled from bank of river, 20m wide and unknown depth of water. Small Shrubs along river bank. No flow observed.	Light olive brown, low turbidity, no odour, no sheen	3.24	117.8	323.6	15.8	294	7.14
SW037	SW037	27/05/2022	Sample taken from sewerage treatment pond. Unknown depth of water. No Vegetation, no flow	Light brown, no turbidity, no odour, no sheen	5.58	77.5	283.3	16.1	297.4	7.66

Notes
mV - miliVolts
mg/L - milligrams per Litre
oC - degrees Celsius
µS/cm - micro Siemens per centremetre
Corrected field Redox measurement (Eh [mV]) = Er [mV] + 205.8

Notes:

LOR	Limit of Reporting
Normal	Primary Sample
Field_D	Intra-laboratory duplicate sample
Interlab_D	Inter-laboratory duplicate sample
	Denotes first time detection above LOR for PFOS+PFHxS c
	Denotes new exceedence of human health screening criteri

Table T5 - Sediment Observations

Location	Alternate Name	Easting	Northing	Date	Depth Range	Descriptions
SD001	SD001	293475.328	6280121.404	24/05/2022	0 - 0.1	Sandy SILT: Dark brown, wet with minor organics (reeds).
SD002	SD002	294183.905	6280713.965	27/05/2022	0 - 0.1	Sandy SILT: Brown, fine grained with minor organics (plant matter)
SD002	SD002	294183.905	6280713.965	27/05/2022	0 - 0.1	Sandy SILT: Brown, fine grained with minor organics (plant matter)
SD003	SD003	294128.979	6280891.748	27/05/2022	0 - 0.1	Sandy SILT: Brown, fine grained with minor organics (plant matter)
SD005	SD005	295651.105	6281077.754	26/05/2022	0 - 0.1	Sandy CLAY: Dark grey, medium plasticity, soft with organics (rootlets)
SD007	SD007	296003.964	6280152.958	26/05/2022	0 - 0.1	Sandy SILT: Dark grey, fine sand with minor organics (leaf litter)
SD008	SD008	296277.208	6279780.573	26/05/2022	0 - 0.1	Sandy SILT: Dark grey/brown, fine grained sands
SD009	SD009	295995.241	6279380.005	26/05/2022	0 - 0.1	SILT: Dark brown, fine trace sand
SD011	SD011	295662.948	6279423.215	27/05/2022	0 - 0.1	Sandy CLAY: Brown, medium plasticity, soft, fine grained sand.
SD013	SD013	295683.354	6279679.01	27/05/2022	0 - 0.1	Sandy SILT: Dark grey/brown, Fine grained with minor organics (rootlets/plant matter)
SD014	SD014	295087.696	6280334.806	26/05/2022	0 - 0.1	Sandy SILT: Brown, fine grained sand with minor organics (rootlets)
SD015	SD015	295086.581	6281223.141	30/05/2022	0 - 0.1	Gravelly SILT: Brown, fine to medium sub rounded gravels, minor organics
SD016	SD016, PW004	295128.735	6281560.077	30/05/2022	0 - 0.1	Sandy CLAY: Pale grey/brown, fine to coarse grained sand, low plasticity and soft
SD018	SD018	297165.365	6279500.683	31/05/2022	0 - 0.1	Sandy CLAY: Brown fine sand, low plasticity, soft
SD019	SD019	296171.632	6279019.519	31/05/2022	0 - 0.1	Sandy Clay: Brown, fine grained sand with minor organics (plant matter)
SD020	SD020	295008.232	6277347.646	31/05/2022	0 - 0.1	Sandy CLAY: Grey brown, medium plasticity, soft, fine sand. Minor organics (grass)
SD022	SD022	291835.389	6280460.686	30/05/2022	0 - 0.1	Sandy SILT: Grey brown, fine to medium sand
SD023	SD023, PW001	296740.19	6279262.279	31/05/2022	0 - 0.1	Sandy SILT: Dark brown, fine to medium sand with minor organics (rootlets and algae)
SD024	SD024	288848.618	6281647.377	31/05/2022	0 - 0.1	SAND: Light brown, fine to medium sand, poorly sorted, trace silt.
SD030	SD030, PW003	297497.294	6279565.379	31/05/2022	0 - 0.1	SAND: Light brown, fine to medium sand, poorly sorted, trace silt.
SD035	SD035	290655.83	6280895.65	30/05/2022	0 - 0.1	Sandy CLAY: Brown, high plasticity, soft, fine sand, trace rootlets.

Certificate of Calibration

This is to certify that the above instrument has been calibrated to the following specifications:

Sensor	Serial no	Standard Solutions	Certified	Solution Bottle Number	Instrument Reading
1. pH 7.00		pH 7.00		377339	pH 6.95
2. pH 4.00		pH 4.00		380327	pH 4.03
3. mV		241.1mV		380834/387761	240.5mV
4. EC		2.76mS		385047	2.76mS
5. D.O		0.00%		11343	0.01%
6. Temp		19.5		MultiTherm	19.1

Calibrated by: **Victor Rubio**

Calibration date: **23/05/2022**

Next calibration due: **19/11/2022**

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PFAS OMP	**Project Number:**	60612562
Project Location:	RAAF Richmond	**Client:**	Department of Defence
PM Name:	Geoff Tredinnick	**Fieldwork Staff Name:**	Andrew Spoor, Nicola Tomlin

This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.

INSTRUMENT DETAILS

Supplier:	YSI Pro
Make and Model:	Aimet
Serial Number:	11C100763

CALIBRATION

CALIBRATE WITH CALIBRATION SOLUTIONS

Date and Time:	25 MAY 22 0730				
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH	pH	µS/cm	ppm	ppm
Calibration Standard Concentration:		7			
Calibration Reading:		7.00			
Calibration Temperature:		12.1			

ONGOING CHECKS

BUMP TEST WITH CALIBRATION SOLUTION

Date and Time:	25 MAY 22 0730				
Parameter	Acidity		Conductivity	Dissolved Oxygen	
Units	pH	pH	µS/cm	ppm	ppm
Calibration Standard Concentration:	4	7	2760	0	
Bump Test Reading:	3.99	6.84	2099	0.06	
Bump Test Temperature:	12.1	12.1	12.3	12.1	

COMMENTS

Detail any equipment faults, minor maintenance performed, change of batteries or technical support provided.

ORP : standard : 251.6
bump reading : 248.4
temp : 12.1

~~Off~~ Conductivity temperature correction factor unknown for 12°C.

Approval and Distribution

☑ Each individual instrument has been inspected and calibrated daily and bump tested as required by fieldwork staff.

Appendix D

Analytical Data Validation

Appendix D Analytical Data Validation

Data Validation

Project number:	60612562	**Validation by:**	[redacted]	**Date:** 14/06/2022
Client:	Department of Defence	**Reviewed by:**	[redacted]	**Date:** 12/8/2022
Site:	RAAF Base Richmond			
Matrix type:	Groundwater / Surface Water / Sediment			
Primary samples:	80 Groundwater samples. 21 Surface water samples. 20 Sediment samples.			
Laboratory:	ALS (Primary) Envirolab (Secondary)			
Lab report references:	ES2219017, ES2218422, ES2221117, 296820			

Key Issues:	No issues were identified that have the potential to impact upon the reliability of the Data. AECOM considers that the field procedures and laboratory QA/QC processes employed were appropriate for the purposes of the investigation.
Field QA / QC	
Field DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).
Sampling personnel	Sampling was conducted by Andrew Spoor and Nicola Tomlin between 24 to 31 May 2022 and by Dirk Sanderson on 16 June 2022. Field personnel were all suitably qualified and experienced AECOM Environmental Scientists.
Handling and Preservation	Primary and duplicate samples for groundwater, surface water and sediment were placed in a chilled cooler between sampling and analysis. Samples were received preserved and chilled at the laboratory, however all containers were received outside the recommended temperature range (4 ± 2°C). Temperatures upon receipt were as follows: • ES2219017 was received at 0.1°C • ES2218422 which was received at -0.1°C • 296820 which was received at 11°C While one of the sample batch's temperature was outside the recommended range, the laboratory noted 'ice present', therefore AECOM considers that the samples had been appropriately preserved. All samples were received at the laboratory in appropriate sample containers.
Calibration of Equipment	Measurement of groundwater geochemical parameters was undertaken using the YSI WQM Professional Plus, which was calibrated by the supplier prior to use, in accordance with manufacturer's instructions and "bump tested" in the field at the beginning of each sampling day Measurement of depth to groundwater was undertaken by an interface probe, which was serviced by the supplier AES prior to use. All calibration and service certificates are presented in **Appendix C**. It is noted that no gauging data or geochemical data was collected on the 16 June 2022.

Data Validation	
Sampling Methodology	The majority of groundwater samples were collected using pre-deployed 1.1L HydraSleeves™, with collected water deposited directly into laboratory prepared bottles. At locations where HydraSleeves™ were not present, or failed to deploy, samples were collected using dedicated, disposable bailers. Following laboratory instructions, the sample bottles were filled to the top, caps immediately applied and samples stored on ice for preservation. Water quality parameters were collected down-well via a submerged water quality meter and were recorded once field values had stabilised. Surface water samples were either collected from directly beneath the surface to limit the infiltration of sediment into samples or using dedicated, disposable bailers where access was limited. Smaller vials were filled from larger sampling containers, to ensure preservative acids did not spill. Following laboratory instructions, the sample bottles were filled to the top, caps immediately applied and samples stored on ice for preservation. Sediment samples were collected using a trowel and deposited directly into laboratory prepared containers. Following laboratory instructions, the sample containers were filled to the top, caps immediately applied and samples stored on ice for preservation. After sampling at each location, the water quality meter and interface probe were decontaminated using Liquinox and the consumables (nitrile gloves, HydraSleeves™ and/or bailers) were disposed of in a waste bin.
Chain of Custody (COC)	All samples that were collected were reported on the Chain of Custody (COC) documents.
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per day of sampling (six in total). Rinsates were either collected from the final rinse of the interface probe or sampling trowel following decontamination using laboratory supplied de-ionised water. It is noted that no rinsate blank samples were collected on 16 June 2022, as samples were collected using a dedicated HydraSleeve™.
Frequency of field QC	Field duplicate and triplicates (inter-laboratory duplicates) were to be collected at a frequency of one in ten primary samples (10%). In total, thirteen field duplicates were collected for water samples (16.4%), and three field duplicate for sediment (15%) were collected, meeting the DQI. Thirteen inter-laboratory duplicates were collected for water samples (16.4%), and three triplicates for sediment (15%) were collected, meeting the DQI.
Laboratory QA / QC	
Laboratory DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).

Data Validation	
Tests requested / reported	All primary water samples were analysed for the Per- and Polyfluoroalkyl Substances (PFAS) extended suite, with approximately 20% of all water samples analysed for nutrients (ammonia, nitrate, nitrite, phosphorous) and metals (aluminium, bromine, iron, manganese). All primary sediment samples were analysed only for the PFAS extended suite. All sample request of analysis was reported on the Chain of Custody (COC). Confirmation of results were requested and adopted for the below samples; • MW016 • MW081 • MW091 • MW098 • MW107I
Holding time compliance	All samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The primary laboratory was ALS Environmental Pty Ltd (Sydney) a National Association of Testing Authorities (NATA) accredited laboratory (Accreditation No. 825). The secondary laboratory used for the project was Envirolab (Envirolab, Sydney), also a NATA accredited laboratory (accreditation number 2901). All analysis was completed using NATA accredited methods.
Frequency of laboratory QC	The primary laboratory (ALS), reported a sufficient frequency of quality control samples with the exception of duplicates for the following workorders: • **ES2219017** - Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS in the water laboratory duplicate (actual rate: 5.22%, expected rate: 10%) - Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS in the water matrix spike (actual rate: 3.48%, expected rate: 5%) The accuracy of the data can be assessed as acceptable based on method blank, laboratory duplicates, LCS recoveries, which were reported at or above the required frequencies and within control limits.
Method Blank	All method blank concentrations were reported <LOR for the analytes tested from the primary laboratory, ALS. This is presented in the laboratory Quality Control Report.
Laboratory duplicate RPDs	The reported laboratory duplicate Relative Percentage Differences (RPD) were within laboratories control limits, with the exception of a number of PFAS compounds in SD001 in batch ES2219017. Given the low limits of reporting for these PFAS compounds, AECOM considers that this would not significantly impact upon the reliability of the data. The laboratory duplicate RPDs are presented in the laboratory Quality Control Report.
Laboratory control spike recovery	Laboratory Control Spike (LCS) recoveries were within the DQIs (70-130%) and / or laboratory analyte specific acceptance criteria (ASAC). The laboratory control spike recovery percentages are presented in the laboratory QC Reports (Appendix E).

Data Validation	
Matrix spike recovery	The reported laboratory Matrix Spike (MS) recoveries were within the laboratory control limits for PFAS analytes with the exception of a number of PFAS compounds in batches ES2219017 where the MS recovery was not determined due to background levels being greater than or equal to 4x spike level. Given the low limits of reporting for these PFAS compounds, AECOM considers that this would not significantly impact upon the reliability of the data.
Surrogate spike recovery	The reported surrogate spike recoveries were within laboratory control limits (60% - 120%).
QA / QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	LORs were sufficiently low to enable assessment against adopted guideline criteria.
Rinsate Blank results	The results of the rinsate analysis indicated that concentrations of PFAS were below the limit of reporting (LOR) for all analytes tested indicating that the decontamination procedures employed were appropriate. Rinsate results are presented in **Table D1** in **Appendix D**.
Field duplicate and Triplicate RPDs	The RPDs for water field duplicates were calculated to be within the DQIs, with the exception of a number of PFAS analytes for water sample duplicate pairs exceeding the DQI with RPDs ranging between 31% and 69% (refer to **Table D2**). Sediment Field duplicate RPDs were reported within the DQIs, with the exception of a number of PFAS analytes for sediment sample duplicate pairs exceeding the DQI with RPDs ranging between 31% and 119% (refer to **Table D3**). The RPD exceedances were largely attributed to the low concentrations of PFAS compounds reported in the primary and duplicate samples which were noted generally to be within the same order of magnitude for each duplicate pair. Therefore, AECOM does not consider that these RPD exceedances impact upon the reliability of the data. Water and Sediment Duplicate RPD results are presented in **Tables D2** and **D3** (respectively) in **Appendix D**.
Overall Assessment	
Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

CERTIFICATE OF ANALYSIS

Work Order	: **ES2218422**	Page	: 1 of 9
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Sepan Mahamad
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 26-May-2022 18:55
Order number	: 60612562_5.1	Date Analysis Commenced	: 27-May-2022
C-O-C number	: 38174	Issue Date	: 02-Jun-2022 15:11
Sampler	: ANDREW SPOOR, MAT JENKINS		
Site	: 0902		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 5		
No. of samples analysed	: 5		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EG020: Bromine quantification may be unreliable due to its low solubility in acid, leading to variable volatility during measurement by ICPMS.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QUALITY CONTROL REPORT

Work Order	: **ES2218422**	Page	: 1 of 7
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Sepan Mahamad
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 26-May-2022
Order number	: 60612562_5.1	Date Analysis Commenced	: 27-May-2022
C-O-C number	: 38174	Issue Date	: 02-Jun-2022
Sampler	: ANDREW SPOOR, MAT JENKINS		
Site	: 0902		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 5		
No. of samples analysed	: 5		

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2218422**	Page	: 1 of 5
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 26-May-2022
Site	: 0902	Issue Date	: 02-Jun-2022
Sampler	: ANDREW SPOOR, MAT JENKINS	No. of samples received	: 5
Order number	: 60612562_5.1	No. of samples analysed	: 5

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Importance: High

Hey team,

Could you please ensure the samples that came 15 mins ago from Aecom are processed ASAP as they have very short holding time?

Thanks

Kind regards,

right solutions. right partner.

Hey Team,

We have some samples being picked up by courier today, that have quite short holding times. The team has just split the COC from compass

Samples collected: Yesterday and Today
Analytes with short holding time: Nitrite and Nitrate

COC: 38174

Please let me know if there are any issues logging these in time

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X: Poor duplicate precision for various analytes on sample ES2219017_077 due to sample heterogenity confirmed by re-extraction and re-analysis.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (24/06/2022):This report has been amended following the client request to split report. All analysis results are as per the previous report.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X: Poor duplicate precision for various analytes on sample ES2219017_077 due to sample heterogenity confirmed by re-extraction and re-analysis.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (24/06/2022):This report has been amended following the client request to split report. All analysis results are as per the previous report.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Alkalinity by Auto Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride. In the presence of ferric ions the liberated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm.
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Order number	: 60612562_5.1	Quote number	: ES2021AECOMAU0027 (SY/139/19 v4 60612562_5.1)
C-O-C number	: 37829	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: NSW_0902_PFASOMP		
Sampler	: ANDREW SPOOR, MAT JENKINS		

Dates

Date Samples Received	: 31-May-2022 18:20	Issue Date	: 24-Jun-2022
Client Requested Due Date	: 08-Jun-2022	Scheduled Reporting Date	: **08-Jun-2022**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 5	Temperature	: 0.1'C - Ice present
Receipt Detail	:	No. of samples received / analysed	: 137 / 133

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which reflects a change in analysis for samples 124, 133, 134 and 135.
- This is an updated SRN which reflects the addition of NT-01 and NT-02 analysis for samples 119 and 129 as per client request.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- Amendment (23/06/2022):This report has been amended following a request to generate a split COA. All analytical results are as per the previous report.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2221117**	Page	: 1 of 4
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MR GEOFF TREDINNICK	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 16-Jun-2022
Site	: ----	Issue Date	: 23-Jun-2022
Sampler	: DIRK SANDERSON	No. of samples received	: 2
Order number	: 60612562_5.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details

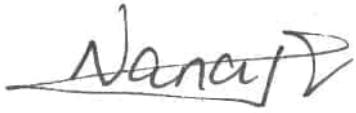
Date results requested by	07/06/2022
Date of Issue	07/06/2022

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Results Approved By
Diego Bigolin, Inorganics Supervisor
Giovanni Agosti, Group Technical Manager
Hannah Nguyen, Metals Supervisor
Josh Williams, Organics and LC Supervisor
Phalak Inthakesone, Organics Development Manager, Sydney

Authorised By



Nancy Zhang, Laboratory Manager

All metals in water-dissolved		
Our Reference		296820-10
Your Reference	UNITS	0902_QC209_220530
Date Sampled		30/05/2022
Type of sample		Water
Date prepared	-	02/06/2022
Date analysed	-	02/06/2022
Aluminium-Dissolved	µg/L	<10
Iron-Dissolved	µg/L	530
Manganese-Dissolved	µg/L	730
Bromine-Dissolved	µg/L	1,100

Method ID	Methodology Summary
Inorg-006	Alkalinity - determined titrimetrically in accordance with APHA latest edition, 2320-B.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-040	The concentrations of the major ions (mg/L) are converted to milliequivalents and summed. The ionic balance should be within +/- 15% ie total anions = total cations +/-15%.
Inorg-055	Nitrate - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a water extraction.
Inorg-055	Nitrite - determined colourimetrically based on APHA latest edition NO2- B. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a water extraction.
Inorg-057	Ammonia - determined colourimetrically, based on APHA latest edition 4500-NH3 F. Waters samples are filtered on receipt prior to analysis. Soils are analysed following a KCl extraction.
Inorg-081	Anions - a range of Anions are determined by Ion Chromatography, in accordance with APHA latest edition, 4110-B. Waters samples are filtered on receipt prior to analysis. Alternatively determined by colourimetry/turbidity using Discrete Analyser.
Metals-020	Determination of various metals by ICP-AES.
Metals-022	Determination of various metals by ICP-MS.
Org-029	Soil samples are extracted with basified Methanol. Waters and soil extracts are directly injected and/or concentrated/extracted using SPE. TCLPs/ASLP leachates are centrifuged, the supernatant is then analysed (including amendment with solvent) - as per the option in AS4439.3. Analysis is undertaken with LC-MS/MS. PFAS results include the sum of branched and linear isomers where applicable. Please note that PFAS results are corrected for Extracted Internal Standards (QSM 5.3 Table B-15 terminology), which are mass labelled analytes added prior to sample preparation to assess matrix effects and verify processing of the sample. PFAS analytes without a commercially available mass labelled analogue are corrected vs a closely eluting mass labelled PFAS compound. Surrogates are also reported, in this context they are mass labelled PFAS compounds added prior to extraction but are used as monitoring compounds only (not used for result correction). Envicarb (or similar) is used discretionally to remove interfering matrix components. Please contact the laboratory if estimates of Measurement Uncertainty are required as per WA DER.

Result Definitions

NT	Not tested
NA	Test not required
INS	Insufficient sample for this test
PQL	Practical Quantitation Limit
<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

Report Comments

Total metals: no unfiltered, preserved sample was received, therefore analysis was conducted from the unpreserved sample bottle. Note: there is a possibility some elements may be underestimated.

PFAS: For PFAS Extracted Internal Standards denoted with # or outside the 50-150% acceptance range, the respective target analyte results may be unaffected, in other circumstances the PQL has been raised to accommodate the outlier(s).

Additional Info

Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt. Requests for longer term sample storage must be received in writing.
Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.
TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) at the RAAF Base Richmond (the 'Site', Site ID 0902) in the NSW and JBT Region. The location of the Site and Management Area is shown in **Figure F1** in **Appendix A**.

The OMP (Defence, 2019a) outlines the sampling requirements for the Site and off-Site areas within the Management Area.

Following each sampling event, factual sampling event reports will be prepared. Annual interpretive reports will be prepared following the completion of each 12-month sampling period.

This Sampling Event Factual Report has been prepared to report the results of the November 2022 biannual sampling event, specifically highlighting first-time detections and/or new exceedances of human health or ecological screening criteria for the sum of Perfluorooctane sulfonic acid (PFOS) and Perfluorohexane sulfonic acid (PFHxS) (herein referred to as PFOS+PFHxS), PFOS and/or Perfluorooctanoic acid (PFOA).

This report has been prepared in accordance with the Defence *PFAS OMP Factual Report Guidance (Version 0.2)* issued in May 2021 (Defence, 2021).

1.2 Objectives

The objectives were to:

- implement the OMP (Defence, 2019a) prepared as part of the Detailed Environmental Investigations; and
- collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, transport, and transformation of PFAS.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PFAS Management Area Plan (PMAP) (Defence, 2019b).

The objective of this phase of works was to implement the scope of works for the November 2022 biannual sampling event in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2022).

2.0 Scope of Work

The scope of works was completed generally in accordance with the SAQP (AECOM, 2022), as follows:

- obtain permission (where required) to conduct works at the Site, off-Site publicly accessible areas and at private properties
- gauging of groundwater level in monitoring wells prior to collection of samples
- groundwater sampling and collection of water quality parameters at 80 of 84 scheduled monitoring wells (refer to **Table 1** below and **Figure F2** in **Appendix A** for specific locations)
- surface water sampling and collection of water quality parameters at 20 of 22 scheduled surface water locations (refer to **Table 2** below and **Figure F3** in **Appendix A** for specific locations)
- sediment sampling at 20 of 21 scheduled sediment locations (refer to **Table 3** below and **Figure F4** in **Appendix A** for specific locations)
- collection of field duplicate samples at a rate of 1 in 10 primary samples
- analysis of all samples for PFAS suite at the standard limit of reporting (LOR), and analysis of select groundwater and surface water samples for nutrients (ammonia, nitrate, nitrite, phosphorous), metals (aluminium, bromide, iron and manganese), and anions and cations
- data management of the OMP field and laboratory data in Defence ESdat database
- preparation of this Sampling Event Factual Report.

Note: due to privacy considerations, selected monitoring locations are unable to be shown on the figures in **Appendix A**.

	South of Site	SD020	1
Total			**21**
* Location not sampled			

3.0 Deviations from the SAQP

The November 2022 biannual sampling event was completed in general accordance with the SAQP (AECOM, 2022) with the exception of the deviations outlined in **Table 4** below.

Table 4 Deviations from SAQP (AECOM, 2022)

SAQP Deviation	Comment / Justification	Impact on Dataset
Samples, and associated gauging data and field parameters, were not collected from 4 of the 84 scheduled groundwater sampling locations.	Groundwater monitoring well MW044 could not be located and could not be gauged and sampled during this event. The well could not be located despite the assistance of a surveyor with a differential GPS and is considered likely to have been destroyed during recent construction works in 2021/2022. Groundwater monitoring well MW086 was covered by a soil stockpile from recent road rectification works along Percival Street and could not be gauged and sampled during this event. Groundwater monitoring wells MW097 and MW098 could not be located and could not be gauged and sampled during this event. The wells could not be located despite the assistance of a surveyor with a differential GPS and are considered likely to have been destroyed during recent floods.	The lack of gauging and sampling data for MW044 is not considered to have a significant impact on the dataset, or present a significant data gap, as the existing monitoring well network provides sufficient coverage in this area (i.e. MW045 and MW046). The lack of gauging and sampling data for MW086 is not considered to have a significant impact on the dataset, or present a significant data gap, as another two monitoring wells (MW091 and MW092) further downgradient in the off-Site area were able to be gauged and sampled during this event. The lack of gauging and sampling data for MW097 and MW098 presents a data gap in the off-site coverage of the down-hydraulic extent of the identified PFAS groundwater plume. AECOM will discuss the requirement to install replacement wells with Defence's Lead Consultant.
Samples, and associated field parameters, were not collected from 2 of the 22 scheduled surface water locations.	Surface water location SW001 was dry and could not be sampled during this sampling event. The field team visited the location on three separate occasions over the course of the sampling event, and confirmed the location was dry each time. Surface water location SW081 was inaccessible, due to the road closure and rectification works associated with a recent landslip and could not be sampled during this sampling event.	The lack of sampling data for SW001 is not considered to have a significant impact on the data or present a significant data gap, given that the location is an ephemeral drainage line and is not expected to have water present at all times. The lack of sampling data for SW081 continues to present a data gap in the understanding of PFAS migration from Bakers Lagoon to the Hawkesbury River. AECOM is currently investigating alternative access arrangements to Bakers Lagoon to collect data during future OMP sampling events.

SAQP Deviation	Comment / Justification	Impact on Dataset
Samples were not collected from 1 of the 21 scheduled sediment locations.	Sediment location SD081 was inaccessible, due to the road closure and rectification works associated with a recent landslip and could not be sampled during this sampling event.	The lack of sampling data for SD081 continues to present a data gap in the understanding of PFAS migration from Bakers Lagoon to the Hawkesbury River. AECOM is currently investigating alternative access arrangements to Bakers Lagoon to collect data during future OMP sampling events.
Additional analysis, for nutrients (ammonia, nitrate, nitrite, phosphorous), selected metals (aluminium, bromine, iron and manganese) and anions/cations, was not analysed for 3 of the 10 scheduled groundwater locations.	Samples from monitoring wells MW001, MW009, MW010, MW022, MW075, MW081, MW082, MW091, MW097 and MW098 are to be analysed for additional analysis. The additional analysis was not scheduled for the sample collected from monitoring well MW082, due to field error, and was not able to be scheduled for monitoring wells MW097 and MW098, as these locations could not be sampled during this sampling event.	The lack of additional analysis for select locations is not considered to have a significant impact on the dataset, or present a significant data gap, given that sufficient non-PFAS data was collected during the initial OMP implementation period (a three year period). The original objective for conducting the additional analysis was to identify potential correlation between PFAS and non-PFAS concentrations, in order to identify any significant off-site contributions to PFAS concentrations from agriculture or heavy industries. No correlation was found based on the data collected to date. As such, the requirement to collect and analyse non-PFAS data was re-assessed in conjunction with Defence's current Lead Consultant (AECOM). This requirement was determined to no longer be necessary and non-PFAS data can be removed from the OMP scope of works ahead of the next sampling event in May 2023.

4.0 Methodology

4.1 Sampling Methodology

The methodology used for the November 2022 biannual sampling event was in general accordance with the SAQP (AECOM, 2022) and is summarised in **Table 5** below.

Table 5 Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater was measured in each monitoring well immediately prior to collection of groundwater samples using an interface probe.
Field parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for groundwater and surface water samples. Field parameters were collected using a calibrated water quality meter (WQM). The equipment supplier and field calibration records are provided in **Appendix C**.
Sampling methodology	**Groundwater Monitoring Wells** Groundwater samples were generally collected from each monitoring well using HydraSleeves™, a no-purge sampling methodology. HydraSleeves™ were installed within the screened interval of the wells for a minimum of 24 hours prior to the sampling round, based on a review of the well construction log. For this event, all the HydraSleeves™ were installed during previous sampling rounds in May 2022 and November 2021. Once sampling was completed, new HydraSleeves™ were deployed in each of the monitoring wells, within the screened interval depth in preparation for the next sampling round. At locations where the HydraSleeves™ failed to deploy or had been removed prior to the sampling event by Defence's Regional Water Quality Monitoring Program (RWQMP) contractor, AECOM collected groundwater samples using dedicated, disposable bailers. During this sampling event, bailers were used at the following monitoring wells as no HydraSleeves™ were present: MW005, MW007, MW009, MW010, MW012, MW020, MW032, MW033, MW041, MW043, MW047, MW050, MW051, MW052, MW053, MW056, MW057, MW058, MW060, MW061, MW072, MW073, MW074, MW078. AECOM will engage with Defence's RWQMP contractor ahead of the next scheduled sampling event to attempt to deconflict the sampling programs and minimize (where possible) the samples to be collected with disposable bailers. **Surface Water** Surface water samples were collected from immediately below the water surface (approximately 10 centimetres [cm] below the surface water level, where depth permitted) to minimise collection of sediment, surface film or floating materials in the samples. At each location, a new, laboratory supplied container was lowered into the water (either by hand or using a sampling pole) with the cap immediately applied once the container was full. **Sediment** Sediment samples representative of potentially deposited sediments were collected from within the water body, using a hand trowel to a maximum depth of

Item	Details
	0.3 metres below ground level (mbgl). A new laboratory supplied container was used at each location for collection of samples.
QA/QC Samples	A QA/QC program was implemented for the sampling and analysis program in order to obtain representative data and assess the reliability of the data obtained. To facilitate the QA/QC program the following sample types were obtained during the sampling program: • *Intra-laboratory duplicates* collected at a rate of 1 in 10 primary samples. The relative percentage difference (RPD) should be less than 30%, or less than 50% if results are less than 20 times the limit of reporting (LOR). Higher RPDs may also be acceptable if results are less than 10 times the LOR. • *Inter-laboratory duplicates* collected at a rate of 1 in 10 primary samples. The relative percentage difference (RPD) should be less than 30%, or less than 50% if results are less than 20 times the limit of reporting (LOR). Higher RPDs may also be acceptable if results are less than 10 times the LOR. • *Rinsate blanks* collected at a frequency of one per set of sampling equipment per day where equipment was reused between locations. Analytical results should be below the laboratory limit of reporting (LOR). For this November 2022 biannual sampling event, the QA/QC samples included: • 14 x intra-laboratory duplicates (7 groundwater, 4 surface water and 3 sediment) which met the target frequency • 14 x inter-laboratory duplicates (9 groundwater, 2 surface water and 3 sediment) which met the target frequency • 8 x rinsate blanks, which met the target frequency. The data validation assessment is presented in **Appendix D**.
Sample analysis	All samples were submitted to the primary and secondary laboratories for PFAS suite at the standard limit of reporting (LOR), and analysis of select groundwater and surface water samples for nutrients (ammonia, nitrate, nitrite, phosphorous), metals (aluminium, bromide, iron and manganese), and anions and cations. The selected groundwater and surface water locations for additional analysis are as follows: monitoring wells MW001, MW009, MW010, MW022, MW075, MW081 MW082, MW091, MW097 and MW098; surface water locations SW003, SW008, SW009, SW015, SW016, SW020, SW022, SW023, SW024 and SW035. Additional analysis was not able to be collected at locations MW082, MW097 and MW098. ALS Environmental (ALS) Sydney, NSW was used as the primary laboratory. Envirolab Services (Envirolab) Sydney, NSW was used as the secondary laboratory. ALS and Envirolab methods for analyses were certified by the National Association of Testing Authorities (NATA). A summary of the laboratory results is presented in **Section 5.0** and the laboratory certificates are presented in **Appendix E**.

4.2 Adopted Screening Criteria

Guidance documents used to assess the dataset include the following:

- Heads of EPAs Australia and New Zealand (HEPA) 2020. *PFAS National Environmental Management Plan 2.0*. January 2020.
- Department of Health, 2017. *Health Based Guidance Values for PFAS for use in site investigations in Australia*. April 2017.
- FSANZ, 2017. *Supporting Document 1: Hazard assessment report – Perfluorooctane Sulfonate (PFOS), Perfluorooctanoic Acid (PFOA), Perfluorohexane Sulfonate (PFHxS).*
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water.* August 2019.
- National Environment Protection Council (NEPC), 2013. *Schedule B1. National Environment Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013) Schedule B1 Guideline on Investigation Levels For Soil and Groundwater.*

The adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 6** below.

Table 6 Summary of Adopted Screening Criteria

Media	Pathway	Compound	Criteria	Comment/Reference
Human Health Receptors				
Water – Groundwater	Drinking water	PFOS + PFHxS	0.07 µg/L	The values presented in the PFAS NEMP, 2020 are from DoH 2017, which published final health-based guidance values for PFAS for use in site investigations in Australia. DoH utilised the TDI for PFOS and PFOA from FSANZ, 2017 and the methodology described in Chapter 6.3.3 of the National Health and Medical Research Council's (NHMRC) Australian Drinking Water Guidelines (ADWG), 2011 (updated in January 2022) to determine drinking water values.
		PFOA	0.56 µg/L	For PFHxS, DoH 2017 noted that '*FSANZ concluded that there was not enough toxicological and epidemiological information to justify establishing a tolerable daily intake. However, as a precaution, and for the purposes of site investigations, the PFOS tolerable daily intake should apply to PFHxS. In practice, this means that the level of PFHxS exposure should be added to the level of PFOS exposure; and this combined level be compared to the tolerable daily intake for PFOS*'. *All groundwater results were compared to these criteria.*

Media	Pathway	Compound	Criteria	Comment/Reference
Water – Surface Water	Recreational use	PFOS + PFHxS	2 µg/L	In August 2019, NHMRC released guidance on the assessment of PFAS in surface water. Rather than adopting an ingestion rate of 0.2 L of water per day (as per the ADWG formula), NHMRC adjusted this rate with consideration of an event frequency (150 events/year) to calculate an annual ingestion rate of 30 L per year. These values were adopted in the PFAS NEMP, 2020. *All surface water results were compared to these criteria.*
		PFOA	10 µg/L	
Ecological Receptors				
Water – Groundwater and Surface Water	Freshwater	PFOS	0.00023 µg/L	The values are from the PFAS NEMP, 2020 which endorsed the Australian and New Zealand Guidelines for Fresh and Marine Water Quality. The 99% species protection level (for freshwater and interim marine) has been applied for high value conservation systems. This approach is generally adopted for chemicals that bioaccumulate and biomagnify in wildlife. It is proposed that the laboratory LOR is adopted for the purposes of preliminary screening of analytical water results, rather than sole use of the criteria value. *All groundwater and surface water results were compared to these criteria.*
		PFOA	19 µg/L	

4.3 Data Quality Objectives and Data Validation

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022). Data validation assessment is provided in **Appendix D**.

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements.

5.0 Field Observations and Results

5.1 General Observations

The weather conditions and general observations (including activities that may impact the monitoring program) recorded during the November 2022 biannual sampling event completed between 2 and 21 November 2022 are summarised in **Table 7** below.

Table 7 General Observations

Items	Observations
Weather Conditions	During the sampling event, the weather was observed to be mostly dry and warm, with maximum daily temperatures between 20.5 ˚C (2 November 2022) and 26.9 ˚C (11 November 2022). No rainfall was recorded on sampling days (2, 3, 7, 8, 10, 11, 18, 21 November 2022), however, a cumulative 31.2 mm of rainfall was recorded at Richmond (Richmond RAAF, Station 067105) (Bureau of Meteorology, 2023) during the whole span of the sampling event, with most of the rainfall recorded on 14 November 2022 (29 mm).
Estate Management Works, Training Activities and/or Construction Works.	Various road rectification and construction works being carried out by Hawkesbury Council were ongoing during the November 2022 sampling event, including along Percival Street and Cornwallis Road, and in some cases prevented access to sampling locations. No estate management works or training activities were observed during the November 2022 sampling event, that would impact the sampling program.

5.2 Field Observations and Measurements

The observations and measurements recorded during the field activities for the November 2022 biannual sampling event are summarised in **Table 8**, below.

Table 8 Field Observations and Measurements

Item	Description
Monitoring Well Network Condition	The wells sampled were observed to be in good condition with the exception of the following: • MW012, MW022 and MW051 have damaged monuments, with missing lids or bent at ground level. AECOM proposes to repair these monuments ahead of the next scheduled sampling event. • MW040, MW077 and MW063 were observed to have damaged gatic lids or bolts. AECOM will attempt to repair and/or replace these gatic lids during the next scheduled sampling event. • MW004, MW051, MW052 and MW072 were missing the J-cap in the well casing. AECOM replaced the J-caps (in MW051, MW052 and MW072), where there was sufficient space in the well gatics/monuments. It is noted that, as MW051 was also missing the well lid on the monument, the well was exposed to water ingress from rainfall. • MW064 had the well gatic full of water above top of casing. The water was removed prior to sampling at the location. • MW024, MW026, MW028, MW032, MW033, MW034, MW063, MW081 had well gatics full of water below top of casing.

Item	Description
	• MW044, MW086, MW097 and MW098 were unable to be assessed as the wells were not able to be located or accessed.
Water Observations	Foam of unknown origin was observed at one surface water location (SW024). Biosheens were noted in one groundwater location (MW034) and in five surface water locations (SW003, SW007, SW009, SW014 and SW016). Sulphurous odours were noted at one groundwater location (MW040). Organic odours were noted at one groundwater locations (MW050).
Depth to Groundwater and Flow Direction	Depth to groundwater ranged from 0.000 (MW081) and 16.652 (MW054) metres below top of casing (mbTOC). Groundwater elevation ranged between -0.054 (MW072) and 15.940 (MW071) metres Australian Height Datum (mAHD). It is noted that groundwater elevation data from MW072 was excluded from the contours given the potential ingress of surface water (due to the absence of a J-cap) and the depth to water was not consistent with historical data. Groundwater gauging data is presented in **Table T1** in **Appendix B**. The inferred groundwater flow direction for the regional shallow (unconfined) aquifer is to the north, east and northeast towards the Hawkesbury River (refer to **Figure F5** in **Appendix A**), which was generally consistent with previous flow directions. Note that gauging data from a number of groundwater monitoring wells were omitted from the contour plan, due to the following: • MW070 and MW071: installed with screens targeting the underlying lower aquifer • MW036, MW043, MW053 and MW072: due to inconsistencies identified in historical TOC elevations or gauging data that may potentially impact elevation readings .
Geochemical Parameters	Groundwater and surface water geochemical parameters were measured during the collection of water samples. The readings are presented in **Table T2** and **Table T3** in **Appendix B** and are summarised below: **Groundwater Geochemical Parameters** • Dissolved oxygen ranged from 0.37 mg/L (MW064) to 10.77 mg/L (MW112) indicating poor to well oxygenated conditions. • Electrical conductivity ranged from 67.6 µS/cm (MW015) to 15,124 µS/cm (MW005) indicating fresh to saline conditions. • pH ranged from 5.68 (MW091) to 7.73 (MW028) indicating moderately acidic to neutral conditions. • Redox ranged from -151.6 mV (MW064) to 235.5 mV (MW081) indicating reducing to oxidising conditions. **Surface Water Geochemical Parameters** • Dissolved oxygen ranged from 0.49 mg/L (SW014) to 12.44 mg/L (SW035) indicating poor to well oxygenated conditions. • Electrical conductivity ranged from 11.9 µS/cm (SW008) to 1,880 µS/cm (SW015) indicating fresh to brackish conditions. • pH ranged from 6.34 (SW014) to 8.37 (SW020) indicating neutral to slightly alkaline conditions. • Redox ranged from -77.4 mV (SW014) to 160.5 mV (SW035) indicating reducing to oxidising conditions.

Item	Description
Sediment Observations	Sediment sampled and logged during this monitoring event comprised sand, silt and clay materials with minor inclusions of gravels and varying amounts of organic material (mostly roots). No anthropogenic inclusions or staining were observed. No odours were noted in the samples from sediment locations. Refer to in **Table T4** in **Appendix B** for a summary of sediment classifications and observations.

5.3 Summary of Analytical Results

5.3.1 Groundwater Analytical Results

The PFAS groundwater analytical results from this sampling event are presented in **Table T5** in **Appendix B**. In summary, 80 primary groundwater samples were analysed for PFAS compounds, with concentrations of:

- PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 72 primary samples
- PFOS+PFHxS and/or PFOA exceeded the adopted human health screening criteria in 62 primary samples
- PFOS and/or PFOA exceeded the adopted ecological screening criteria in 64 primary samples.

Deviations from the historical dataset are reported in **Table 9** and graphically on **Figure F6** in **Appendix A**.

Table 9 Deviations from Historical Dataset: Groundwater

Deviation Type	Groundwater sampling location	PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Nov 2022	Previous maximum	Nov 2022	Previous maximum	Nov 2022	Previous maximum
First-time detections of PFOS+PFHxS PFOS and/or PFOA in groundwater	MW078	There were no first-time detections in the dataset.		0.01	<LOR	There were no first-time detections in the dataset.	
New exceedance of the NEMP (HEPA, 2020) drinking water guidelines in groundwater	n/a	There were no new exceedances of the NEMP Human Health Screening Criteria in the dataset.		There were no new exceedances of the NEMP Human Health Screening Criteria in the dataset.		There are no applicable NEMP Human Health Screening Criteria.	
New exceedance of the NEMP (HEPA, 2020) Freshwater 99% guidelines in groundwater	n/a	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).	
Legend							
Blue Shading	Blue shading indicates sampling location with first-time detection of PFOS+PFHxS, PFOS and/or PFOA						
Yellow Shading	Yellow shading indicates sampling location with first-time exceedance of NEMP Human Health and/or Ecological Screening Criteria						

The non-PFAS groundwater analytical results from this sampling event are presented in **Table T5** in **Appendix B**, and are summarised below:

- Anions (total) ranged from 1.77 milliequivalents per litre (meq/L) (MW091) to 56.1 meq/L (MW009)
- Cations (total) ranged from 1.94 meq/L (MW091) to 56.1 meq/L (MW009)
- Ammonia (as N) ranged from <LOR (MW001, MW075) to 220 µg/L (MW022)
- Nitrite + Nitrate (as N) ranged from 0.01 mg/L (MW001) to 4.13 mg/L (MW091)
- Phosphorous / Phosphate as P ranged from 0.02 mg/L (MW010) to 0.82 mg/L (MW022)
- Aluminium ranged from <LOR (MW001, MW009, MW010, MW022, MW081) to 0.18 mg/L (MW091)
- Bromine ranged from 300 (MW091) to 5,800 µg/L (MW009)
- Iron ranged from <LOR (MW001, MW009, MW010) to 4.1 mg/L (MW022)
- Manganese ranged from 0.006 mg/L (MW091) to 2.4 mg/L (MW009).

5.3.2 Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T6** in **Appendix B**. In summary, 20 primary surface water samples were analysed for PFAS compounds, with concentrations of:

- PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 18 primary samples
- PFOS+PFHxS and/or PFOA exceeded the adopted human health screening criteria in 4 primary samples
- PFOS and/or PFOA exceeded the adopted ecological screening criteria in 18 primary samples.

Deviations from the historical dataset are provided in **Table 10** and on **Figure F7** in **Appendix A**.

Table 10 Deviations from Historical Dataset - Surface Water

Deviation Type	Surface water sampling location	Sum of PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Nov 2022	Previous maximum	Nov 2022	Previous maximum	Nov 2022	Previous maximum
First-time detections of PFOS+PFHxS PFOS and/or PFOA in surface water	SW016	There were no first-time detections in the dataset.		0.02	<LOR	There were no first-time detections in the dataset.	
New exceedance of the NEMP (HEPA, 2020) recreational guidelines in surface water	n/a	There were no new exceedances of the NEMP Human Health Screening Criteria (Recreational) in the dataset.		There were no new exceedances of the NEMP Human Health Screening Criteria (Recreational) in the dataset.		There are no applicable NEMP Human Health Screening Criteria (Recreational).	
New exceedance of the NEMP (HEPA, 2020) Freshwater 99% guidelines in surface water	n/a	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).	
Legend							
Blue Shading	Blue shading indicates sampling location with first-time detection of PFOS+PFHxS, PFOS and/or PFOA						
Yellow Shading	Yellow shading indicates sampling location with new exceedance of NEMP Human Health and/or Ecological Screening Criteria						

Deviation Type	Surface water sampling location	Sum of PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Nov 2022	Previous maximum	Nov 2022	Previous maximum	Nov 2022	Previous maximum
N/A	Not applicable – no historical data available.						
Note: SW016 PFOA first time detection was recorded in both the primary and intra-laboratory sample.							

The non-PFAS surface water analytical results from this sampling event are presented in **Table T6** in **Appendix B**, and are summarised below:

- Anions (total) ranged from 1.43 meq/L (SW024) to 25 meq/L (SW015)
- Cations (total) ranged from 1.56 meq/L (SW024) to 23.5 meq/L (SW015)
- Ammonia (as N) ranged from 20 (SW020, SW024) to 620 µg/L (SW008)
- Nitrite + Nitrate (as N) ranged from <LOR mg/L (SW020) to 1.8 mg/L (SW022)
- Phosphorous / Phosphate as P ranged from 0.03 mg/L (SW024) to 0.23 mg/L (SW003)
- Aluminium ranged from 0.01 (SW015, SW016) to 1.05 mg/L (SW009)
- Bromine ranged from 100 (SW024) to 1,700 µg/L (SW015)
- Iron ranged from 0.07 (SW015) to 3.98 mg/L (SW003)
- Manganese ranged from 0.012 mg/L (SW0241) to 1.39 mg/L (SW008).

5.3.3 Sediment Analytical Results

The PFAS sediment analytical results from this sampling event are presented in **Table T7** in **Appendix B**. In summary, 20 primary sediment samples were analysed for PFAS compounds, with concentrations of PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 18 primary samples.

There were no first-time detections for PFOS+PFHxS, PFOS and/or PFOA, in the sediment samples analysed.

5.4 Historical Sampling Data

Historical groundwater, surface water and sediment sampling data are presented in **Tables T8**, **T9** and **T10** (respectively) in **Appendix B**.

6.0 Summary and Next Sampling Events

6.1 Summary of Monitoring Event

The November 2022 biannual sampling event was completed between 2 and 21 November 2022. The findings and the recommended actions are summarised in **Table 11** below.

Table 11 Summary of Sampling Event

Item	Comment	Recommended Action
Access to sampling locations	The following were accessed and able to be sampled: • 80 groundwater locations • 20 surface water locations • 20 sediment locations	Nil.
Location unable to be located, inaccessible or dry	Samples from three monitoring wells (MW044, MW097 and MW098) were not collected as the locations were unable to be located despite multiple attempts being made and the use of a surveyor. Samples from one monitoring well (MW086) were not collected as the location was inaccessible due to the placement of a soil stockpile over the well. Samples from one co-located surface water / sediment location (SW081 / SD081) were not collected as the access road to the locations was closed for rectification works required following a landslide.	AECOM will attempt to access and sample locations MW086 and SW001, SW081 and SD081 during the next scheduled sampling event. Additionally, AECOM is currently investigating alternative access arrangements to Bakers Lagoon. AECOM proposes the removal of MW044, MW097 and MW098 from the OMP program as the wells are believed to have been destroyed. AECOM will discuss the potential replacement of monitoring wells MW097 and MW098 (with new wells of similar construction) with Defence's Lead Consultant, as the lack of data from these wells presents a data gap in coverage of the area. AECOM does not consider it necessary to replace MW044 as other existing monitoring wells in the vicinity of MW044 provide sufficient coverage of the area.

Item	Comment	Recommended Action
Monitoring well network condition	All monitoring wells that were able to be accessed were noted to be in good condition, with the exception of some with damaged monuments or gatics, and/or missing lids or J-caps. Additionally, some wells had water in the well gatic, with the water either above or below TOC.	AECOM proposes to mobilise ahead of the next sampling event to repair damaged monuments. AECOM will attempt to replace any missing or damaged lids, bolts and J-caps during the next scheduled sampling event.
Analytical Results	80 groundwater primary samples, 20 surface water primary samples and 20 sediment primary samples were analysed.	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time. The requirement to collect and analyse non-PFAS data was re-assessed in conjunctions with Defence's Lead Consultant (AECOM), and it was determined that it is no longer required and that it can be removed from the OMP scope of works ahead of the next sampling event in May 2023.
First-time detections of PFOS+PFHxS, PFOS and/or PFOA	One of 80 monitoring wells sampled (MW078) reported first-time detections of PFOS+PFHxS, PFOS and/or PFOA. One of 20 surface water locations sampled (SW016) reported first-time detections of PFOS+PFHxS, PFOS and/or PFOA. No sediment locations sampled reported first-time detections of PFOS+PFHxS, PFOS and/or PFOA.	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.
New exceedance of adopted human health screening criteria	No groundwater or surface water locations sampled reported new exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA.	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.
New exceedance of adopted ecological screening criteria	No groundwater or surface water locations sampled reported new exceedances of the adopted ecological screening criteria for PFOS and/or PFOA.	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.

6.2 Upcoming Sampling Events

The next OMP sampling event is scheduled for May 2023.

6.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled to be delivered in Q2 2023.

Notes

LOR	Limit of Reporting
Normal	Primary sample
Field_D	Intra-laboratory duplicate sample
Interlab_D	Inter-laboratory duplicate sample
	Denotes first-time detection above LOR
	Denotes new exceedence of human health and/or ecological screening criteria

Notes

LOR	Limit of Reporting
Normal	Primary sample
Field_D	Intra-laboratory duplicate sample
Interlab_D	Inter-laboratory duplicate sample
	Denotes first-time detection above LOR
	Denotes new exceedence of human health and/or ecological screening criteria

Notes

LOR	Limit of Reporting
Normal	Primary sample
Field_D	Intra-laboratory duplicate sample
Interlab_D	Inter-laboratory duplicate sample
	Denotes first-time detection above LOR
	Denotes new exceedence of human health and/or ecological screening crit

Table T7 – Sediment Analytical Results

Comments	-

Instrument Check

Item	Test	Test Passed	Comments
2 x Alkaline C-size Batteries	Klein Tools MM300 Multimeter	✓	Both batteries reading above 2.9V
Battery Saver Function	Operation	✓	Automatically turns off after 60 minutes if idle
Unit Display	Operation	✓	Screen visible, no damage
Keypad	Operation	✓	Responsive, no damage
Connection Port and Cable	Condition/Check	✓	Clean, no damage
Monitor Housing	Condition/Check	✓	No damage
Firmware	Version	✓	4.0.0
pH Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
pH millivolts for pH 7.00	Calibration	✓	pH 7.00 calibration range between 0 mV ± 50 mV
pH millivolts for pH 4.00	Calibration	✓	pH 4 mV range +165 to +180 from 7 buffer mV value
pH slope	Calibration	✓	Range between 55 to 60 mV/pH (ideal value 59 mV)
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
ORP Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
ORP Reading	Calibration	✓	Within ± 80 mV of reference Zobell Reading
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
Conductivity/Temp Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
Conductivity Cell	Calibration	✓	Conductivity cell constant 5.0 ± 1.0 in GLP file
Clean Sensor Readings	Calibration	✓	Clean sensor reads less than 3 uS/cm in dry air
Dissolved Oxygen Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
DO Cap	Condition/Calibration	✓	1.25 mil PE membrane (yellow membrane)
DO Sensor in Use	Condition	✓	Polarographic DO sensor
DO Sensor Value	Calibration	✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA

Instrument Readings

Parameter	Standard Used	Reference No.	Calibration Value	Observed	Actual	Units
Temperature	Centre 370 Thermometer	Room Temp.	23.6	23.3	23.6	°C
pH	pH 4.00	386466	4.01	3.91	4.01	pH
pH	pH 7.00	387329	7.00	6.92	7.00	pH
Conductivity	2760 µs/cm at 25°C	388521	2760	2765	2760	µs/cm
ORP (Ref. check only)	Zobell A & B	380835/382785	233.8	235.6	233.8	mV
Zero Dissolved O_2	$NaSO_3$ in Distilled H_2O	389912	0.0	0.2	0.0	%
100% Dissolved O_2	100% Air Saturated H_2O	Fresh Air	100.0	97.4	100.0	%

Declaration

WAM Scientific certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The calibration data supplied was obtained in accordance with manufacturer's specifications using solutions of known values.

Serial Number	01-7967
Client Name	Jessica Roy (AECOM Australia)
Project Number	60612562_5.1

Instrument Check			
Item	Test	Test Passed	Comments
9V Battery	Klein Tools MM300 Multimeter	✓	Battery voltage reading above 7.9V
Battery Box	Check	✓	No damage
Face and Back Plates	Check	✓	No damage
Thumb Screws	Check	✓	Rubber ends intact
Tape Hangar/Protector	Check	✓	No damage
On/Off Button	Operation	✓	Button is functional
Buzzer	Operation	✓	Intermittent tone in H_2O, solid tone in product
LED Signal Light	Operation	✓	LED light functional – green and red
Probe	Operation/Check	✓	Decontaminated, cleaned and tested
Tape	Condition/Check	✓	Decontaminated and cleaned, no damage
Connection	Check	✓	Probe and link connected correctly and tightly
PCB	Operation	✓	Unit is fully functional
Electronics Panel	Orientation	✓	Correctly aligned

Instrument Readings		
Product	Buzzer	LED Light
H_2O	Intermittent	Blinking – Red
Petroleum	Solid	Steady – Red

Declaration
WAM Scientific certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The interface meter was decontaminated, cleaned and tested with a mixture of tap water and petrol, shielded from ambient light.

Analytical Data Validation

DATA VALIDATION REPORT

Project number:	60612562	Validation by:	[redacted]	Date:	13/01/2023
Client:	Department of Defence	Data verified by:		Date:	10/02/2022
Site:	RAAF Base Richmond	Project Manager:			
Matrix type:	Groundwater, Surface Water, and Sediment				
Primary samples:	80 Groundwater samples, 20 Surface Water samples, 20 Sediment samples				
Laboratory:	Primary: ALS, Secondary: Envirolab				
Lab reference:	ES2239683, ES2240328, ES2240927, ES2241892 and ES2242128 (ALS), 310103 (Envirolab)				

Key Issues:	No QA/QC issues were identified in the field or laboratory datasets that could have a material implication to decision-making on the project.

Field Quality Assurance and Quality Control

Field DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).
Sampling personnel	Sampling was conducted by Jessica Roy, Jack Rawsthorne and Nicola Tomlin between 2/11/2022 and 21/11/2022. Field personnel were both suitably qualified and experienced AECOM Environmental Scientists and Engineers.
Sampling Methodology	All water and sediment samples were collected in accordance with the methodology outlined in the SAQP (AECOM, 2022). After each sample was collected, reusable equipment was decontaminated using Liquinox and potable water, and the consumables (nitrile gloves, HydraSleeve™ materials and/or bailers) were disposed of in waste bins.
Chain of Custody (COC)	All samples collected were reported on the Chain of Custody documents (COC) and subsequent email amendments and analysed for requested analytes.
Rinsate Blank	Rinsate blank samples were collected at a frequency of 1 per day of sampling where equipment was re-used and decontaminated between sample points (for a total of 8 rinsate blank samples collected). Rinsate blank samples were either collected from the final rinse of the interface probe or sampling trowel following decontamination, using laboratory-supplied de-ionised water.
Frequency of field QC	Field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a frequency slightly greater than one in ten primary samples (10%), exceeding the DQI. In total: • 11 water field duplicates and 11 water field triplicates were collected (11%) for 100 primary water samples (26+43+39+9+2) • 3 sediment field duplicates and 3 sediment field triplicates were collected (15%) for 20 primary sediment samples.
Handling and preservation	All samples were received by the primary laboratory in appropriate containers, with ice present, within the recommended temperature range (<6°C) with the exception of the following: • Temperature: ES2241892 (8.4°C) and ES2242128 (6.6°C) • Sample container non-compliance: 0902_SW024_221103 and 0902_QC306_221118 were received in "Clear Plastic Bottle Natural" instead of "Clear Plastic Bottle – Nitric Acid; Unfiltered" for metals analysis. All samples were received by the secondary laboratory in appropriate containers, with ice present, however, the sample receipt temperature was recorded at 12°C, outside the recommended temperature range.

	Given that the laboratories reported the cooling media was ice and that the analytical groups tested are of non-volatile nature, AECOM considers that the temperature anomalies were not significant. With respect to the sample container non-compliance, it is noted that sample 0902_QC306_221118 was incorrectly scheduled for metals analysis, therefore the non-compliance is not considered to be significant. Regarding the sampling non-conformance for sample 0902_SW024_221103, it was noted that this was the result of the field team not having sufficient nitric-acid preserved bottles on that day of sampling. Given that metals are not a primary CoPC for this program, and the sample was extracted and analysed within 48 hrs of collection, AECOM does not consider this non-conformance to impact upon meeting the objectives of the sampling event.
Calibration of equipment	Measurements of water geochemical parameters were undertaken using YSI Professional Plus water quality meters, which were calibrated by the supplier prior to use, in accordance with the manufacturer's instructions and bump tested daily by the field personnel. Measurements of depth to groundwater were undertaken using interface probes, which were serviced by the supplier prior to use. All equipment calibration and service certificates are presented in Appendix C.
Laboratory QA/QC	
Laboratory DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).
Tests requested/reported	All samples were analysed for per- and polyfluoroalkyl substances (PFAS) extended suite, with 7 primary groundwater samples and 10 primary surface water samples analysed for nutrients (ammonia, nitrate, nitrite and phosphorus) and metals (aluminium, bromine, iron, manganese). All primary sediment samples were analysed only for the PFAS extended suite. All sample requests for analysis are reported on the Chain of Custody (COC).
Holding time compliance	All samples were extracted and analysed by the laboratory within the recommended holding times.
Laboratory accreditation	The primary laboratory analysis was conducted by ALS Environmental Pty Ltd (Sydney) a National Association of Testing Authorities (NATA) accredited laboratory (Accreditation No. 825). The secondary samples were analysed at Envirolab Services, also a NATA accredited laboratory (accreditation number 2901).
Frequency of laboratory QC	The primary laboratory ALS reported a sufficient frequency of quality control samples to assess whether the results have been reported with acceptable accuracy and precision, with the exception of: Laboratory Duplicates • ES2240328: PFAS by LCMSMS: Actual Rate (%) 6.90, Expected Rate (%) 10.00 Matrix Spikes • ES2240328: PFAS by LCMSMS: Actual Rate (%) 3.45, Expected Rate (%) 5.00 The precision and accuracy of the data can be assessed as acceptable based on method blanks, laboratory control spike and surrogate spike recoveries, which were reported at the required frequencies and within control limits, and the reported laboratory duplicates and matrix spikes which were within control limits.

Method Blank	All method blank concentrations were reported <LOR (limit of reporting) for the analytes tested, meeting the project requirements. This is presented in the Quality Control Reports for both laboratories.
Laboratory duplicate RPDs	The reported laboratory duplicate's Relative Percentage Differences (RPDs) were within laboratory control limits. The laboratory duplicate RPDs are presented in the Quality Control Reports for the primary laboratory.
LCS recovery	Laboratory control spike (LCS) recoveries were within control limits. This is presented in the Quality Control Reports for both laboratories.
Matrix spike recovery	Matrix spike (MS) recoveries were within control limits with the exception of: Non-determined MS recoveries • ES2239683: Chloride, 0902_MW009_221102— • ES2239683: Ammonia as N, Anonymous • ES2239683: Total Kjeldahl Nitrogen as N, Anonymous • ES2239683: Total Phosphorous as P, Anonymous • ES2240927: Perfluorooctane sulfonic acid (PFOS), 0902_SD005_221111— • ES2240927: Sulfate as SO4 Turbidimetric, Anonymous • ES2241892: Perfluorohexane sulfonic acid (PFHxS), 0902_MW013_221118 These non-determinations were due to background levels being greater than or equal to four times spike levels, which do not reflect method bias or affect data interpretation. Additionally, it is noted that some of these non-determinations were recorded for non-AECOM samples.
Surrogate spike recovery	The reported surrogate spike recoveries were within laboratory control limits.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalies between field observations and analytical results were noted.
Anomalous data / Repeat Analysis	Following the reporting of PFAS concentrations which were outside historical ranges at a number of locations (MW051, MW053, MW072, MW079, MW106 and SD022), the primary laboratory was requested to confirm the results, where necessary by re-analysis. The laboratory confirmed there was no carry-over or dilution error on samples for MW053, MW072, MW079, MW106 and SD022. Repeat analysis was performed on the sample for MW051 and the original reported concentrations were confirmed.
Data transcription	A check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and the tables generated by AECOM.
Limits of reporting	Laboratory LORs were sufficiently low to enable assessment against adopted guideline criteria.
Rinsate Blank sample results	The concentrations of PFAS in the Rinsate Blank samples (Table D3) were below the limit of reporting (LOR). Two non-COPCs in rinsate blank 0902_QC306_221118, for Sulfate as SO4 Turbidimetric (2 mg/L) and Total Anions (0.04 mg/L) were detected. These detections are largely considered unlikely to present a significant impact on the validity of the data as the rinsate blank was collected from an interface probe on 18 November 2022 and incorrectly scheduled for additional analysis (anion/cations,

select nutrients and metals). The detections are likely a relic of the deionisation or distillation process used to produce the rinsate water.

Furthermore, the detections of Sulfate and Anions in the rinsate blank have no repercussions on the interpretation of the analytical result for the monitoring wells. It is noted that a surface water location was sampled on the same day and scheduled for additional analysis, however, the concentration of Sulfate and Anions are within the same order of magnitude or within historical ranges in the samples analysed.

Intra/Inter-laboratory duplicate RPDs for Field Duplicates / Triplicates

Field duplicates (intra-laboratory duplicates) RPDs for field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) were reported within acceptable limits (≤30%, or ≤50% for results 10-20 x LOR, or No Limit for results <10 x LOR), with the exception of:

<u>Intra-laboratory duplicates (Field Duplicates) RPDs</u>

0902_SW022/QC104
- Ionic Balance: 62%

0902_MW060/QC107
- Perfluorooctane sulfonic acid (PFOS): 49%

0902_MW074/QC111
- Perfluoroheptane sulfonic acid (PFHpS):37%

0902_SW008/QC113
- Ionic Balance: 78%

0902_SD022/QC102
- Perfluorooctane sulfonic acid (PFOS): 68%
- Perfluorodecane sulfonic acid (PFDS): 104%

<u>Inter-laboratory duplicates (Field Triplicates) RPDs</u>

0902_MW022/QC211
- Perfluorooctane sulfonic acid (PFOS): 31%
- Perfluorohexanoic acid (PFHxA): 33%
- Ionic Balance: 41%

0902_MW024/QC201
- Perfluorooctane sulfonic acid (PFOS): 108%
- Perfluorohexane sulfonic acid (PFHxS): 44%
- Perfluoropentane sulfonic acid (PFPeS): 62%
- Perfluorobutane sulfonic acid (PFBS): 67%

0902_MW106/QC213
- Perfluorooctane sulfonic acid (PFOS): 39%

0902_MW059/QC205
- Perfluorohexanoic acid (PFHxA): 37%

0902_MW060/QC207
- Perfluorooctane sulfonic acid (PFOS): 49%

0902_SD022/QC202
- Perfluorooctane sulfonic acid (PFOS): 32%
- Perfluorodecane sulfonic acid (PFDS): 131%

0902_SD001/QC206

- Perfluorooctanoic Acid (PFOA): 58%
- Perfluorohexane sulfonic acid (PFHxS): 104%
- 6:2 Fluorotelomer sulfonic acid (6:2 FTS): 67%
- 10:2 Fluorotelomer sulfonic acid (10:2 FTS): 34%
- Perfluoropentane sulfonic acid (PFPeS): 72%
- Perfluorohexanoic acid (PFHxA): 45%
- Perfluoroheptane sulfonic acid (PFHpS): 64%
- Perfluoroheptanoic acid (PFHpA): 70%
- Perfluorooctane sulfonamide (FOSA): 32%

The elevated RPDs for groundwater duplicate pairs were generally marginally above acceptable limits and were within the same order of magnitude. Additionally, all concentrations with the elevated RDPs, are reported either well above or well below the adopted guideline criteria or have no applicable guideline criteria. Therefore, AECOM considers that these are not significant to impact the interpretation of results.

Elevated RPDs are common in sediment samples due to their heterogeneous nature of the sediment sampled, and therefore are considered acceptable.

Where required for quantitative purposes, the highest concentrations from the primary and duplicate pairs will be used in the assessment.

Overall Assessment

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

Notes
LOR = Limit of Reporting
µg/L = micrograms per litre
mg/L = milligrams per litre
nc = non calculable as concentrations in one or both samples are below the LOR
High RPDs (>30%, or >50% for results 10-20 x LOR) are highlighted in bold

CERTIFICATE OF ANALYSIS

Work Order	: **ES2239683**	Page	: 1 of 25
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Sepan Mahamad
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 03-Nov-2022 15:30
Order number	: 60612562_5.1	Date Analysis Commenced	: 03-Nov-2022
C-O-C number	: 44502	Issue Date	: 11-Nov-2022 15:57
Sampler	: JESSICA ROY, MAT JENKINS		
Site	: Richmond day 1		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 33		
No. of samples analysed	: 33		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- As per QWI – EN55-3 Data Interpreting Procedures, Ionic balances are typically calculated using Major Anions - Chloride, Alkalinity and Sulfate; and Major Cations - Calcium, Magnesium, Potassium and Sodium. Where applicable and dependent upon sample matrix, the Ionic Balance may also include the additional contribution of Ammonia, Dissolved Metals by ICPMS and H+ to the Cations and Nitrate, SiO2 and Fluoride to the Anions.
- EG020: Bromine quantification may be unreliable due to its low solubility in acid, leading to variable volatility during measurement by ICPMS.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2239683**	Page	: 1 of 11
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 03-Nov-2022
Site	: Richmond day 1	Issue Date	: 11-Nov-2022
Sampler	: JESSICA ROY, MAT JENKINS	No. of samples received	: 33
Order number	: 60612562_5.1	No. of samples analysed	: 33

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
ED045G: Chloride by Discrete Analyser	ES2239683--003	0902_MW009_221102	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK055G: Ammonia as N by Discrete Analyser	ES2239580--001	Anonymous	**Ammonia as N**	7664-41-7	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK061G: Total Kjeldahl Nitrogen By Discrete Analyser	ES2239580--001	Anonymous	**Total Kjeldahl Nitrogen as N**	----	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK067G: Total Phosphorus as P by Discrete Analyser	ES2239580--001	Anonymous	**Total Phosphorus as P**	----	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Moisture Content	1	12	8.33	10.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	Evaluation	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	1	12	8.33	10.00	×	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Alkalinity by Auto Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride. In the presence of ferric ions the liberated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm.
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Total Kjeldahl Nitrogen as N By Discrete Analyser	EK061G	WATER	In house: Referenced to APHA 4500-Norg D (In house). An aliquot of sample is digested using a high temperature Kjeldahl digestion to convert nitrogenous compounds to ammonia. Ammonia is determined colorimetrically by discrete analyser. This method is compliant with NEPM Schedule B(3)
Total Nitrogen as N (TKN + Nox) By Discrete Analyser	EK062G	WATER	In house: Referenced to APHA 4500-Norg / 4500-NO3-. This method is compliant with NEPM Schedule B(3)
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order	: **ES2239683**	Page	: 1 of 18
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MAT JENKINS	Contact	: Sepan Mahamad
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: NSW_0902_PFASOMP	Date Samples Received	: 03-Nov-2022
Order number	: 60612562_5.1	Date Analysis Commenced	: 03-Nov-2022
C-O-C number	: 44502	Issue Date	: 11-Nov-2022
Sampler	: JESSICA ROY, MAT JENKINS		
Site	: Richmond day 1		
Quote number	: SY/139/19 v4 60612562_5.1		
No. of samples received	: 33		
No. of samples analysed	: 33		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Project	: NSW_0902_PFASOMP	Page	: 1 of 4
Order number	: 60612562_5.1	Quote number	: ES2021AECOMAU0027 (SY/139/19 v4 60612562_5.1)
C-O-C number	: 44502	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: Richmond day 1		
Sampler	: JESSICA ROY, MAT JENKINS		

Dates

Date Samples Received	: 03-Nov-2022 15:30	Issue Date	: 03-Nov-2022
Client Requested Due Date	: 10-Nov-2022	Scheduled Reporting Date	: **10-Nov-2022**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Not Available
No. of coolers/boxes	: 2	Temperature	: 3.5'C - Ice present
Receipt Detail	:	No. of samples received / analysed	: 33 / 33

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

Method Sample ID	Sample Container Received	Preferred Sample Container for Analysis
Total Metals by ICP-MS - Suite A : EG020A-T		
0902_SW024_221103	- Clear Plastic Bottle - Natural	- Clear Plastic Bottle - Nitric Acid; Unfiltered

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- As per QWI – EN55-3 Data Interpreting Procedures, Ionic balances are typically calculated using Major Anions - Chloride, Alkalinity and Sulfate; and Major Cations - Calcium, Magnesium, Potassium and Sodium. Where applicable and dependent upon sample matrix, the Ionic Balance may also include the additional contribution of Ammonia, Dissolved Metals by ICPMS and H+ to the Cations and Nitrate, SiO2 and Fluoride to the Anions.
- EG020: Bromine quantification may be unreliable due to its low solubility in acid, leading to variable volatility during measurement by ICPMS.
- EP231X: PFAS results for sample #44, #46 confirmed by re-extraction and re-analysis.
- EP231X: Particular samples required dilution due to sample matrix . LOR values have been adjusted accordingly.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
