QUALITY CONTROL REPORT

Work Order	: **EB2130835**	Page	: 1 of 22
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: PO BOX 1307 FORTITUDE VALLEY QLD, AUSTRALIA 4006	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: [redacted]	Telephone	: [redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 28-Oct-2021
Order number	: 60612563 3.1	Date Analysis Commenced	: 01-Nov-2021
C-O-C number	: ----	Issue Date	: 09-Nov-2021
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 85		
No. of samples analysed	: 85		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
	Senior Organic Chemist - PFAS	Brisbane Inorganics, Stafford, QLD
	Senior Organic Chemist - PFAS	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2130835**	Page	: 1 of 14
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 28-Oct-2021
Site	: ----	Issue Date	: 09-Nov-2021
Sampler	: [redacted]	No. of samples received	: 85
Order number	: 60612563 3.1	No. of samples analysed	: 85

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count QC	Count Regular	Rate (%) Actual	Rate (%) Expected	Quality Control Specification
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	3	46	6.52	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	46	2.17	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 46 / 46

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **2/11/21: SRN has been resent to acknowledge the addition on PFAS to samples 45 and 46 requested by J[redacted].**
- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work orders EB2130835/ EB2130850 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on [redacted]**
- **The laboratory acknowledges your requested reporting date of 5 days, however due to the analytical request and associated procedures involved the requested due date will not be possible. Please note the best practical due date has been assigned.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Extra samples were received labelled as SW090 & SD090 and have been placed on hold. If testing is required on these samples, please contact ALS Client Services at [redacted]**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

ALS Environmental

CERTIFICATE OF ANALYSIS

Work Order	: **EB2130850**	Page	: 1 of 29
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: PO BOX 1307 FORTITUDE VALLEY QLD, AUSTRALIA 4006	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: [redacted]	Telephone	: [redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 28-Oct-2021 12:50
Order number	: 60612563 3.1	Date Analysis Commenced	: 02-Nov-2021
C-O-C number	: ----	Issue Date	: 08-Nov-2021 17:07
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 46		
No. of samples analysed	: 46		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
[redacted]	Senior Organic Chemist - PFAS	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work orders EB2130835/ EB2130850 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on ALSEnviro.Brisbane@alsglobal.com**
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants and matrix interference. LOR values have been adjusted accordingly. The LOR of particular analytes have been furhter raised due to sample matrix interferences.
- EP231X-INJ PFAS: The LORs of PFPeA and PFOA for sample “0861_SW008_211026” have been raised due to sample matrix interferences.
- EP231X-INJ PFAS: The LOR of PFBS for sample “0861_QC163_211026” has been raised due to sample matrix interferences.
- EP231X PFAS: High MS recovery deemed acceptable as all associated analyte results are less than LOR
- EP231X-INJ PFAS by LCMSMS: Particular samples have been tested to the legacy QSM 5.1 aligned, NATA accredited method due to sample matrix being unsuitable for SPE extraction (high sediment content)
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: PO BOX 1307 FORTITUDE VALLEY QLD, AUSTRALIA 4006	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: [redacted]	Telephone	: [redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 28-Oct-2021
Order number	: 60612563 3.1	Date Analysis Commenced	: 02-Nov-2021
C-O-C number	: ----	Issue Date	: 08-Nov-2021
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 46		
No. of samples analysed	: 46		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
[redacted]	Senior Organic Chemist - PFAS	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2130850**	Page	: 1 of 10
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 28-Oct-2021
Site	: ----	Issue Date	: 08-Nov-2021
Sampler	: [redacted]	No. of samples received	: 46
Order number	: 60612563 3.1	No. of samples analysed	: 46

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231C: Perfluoroalkyl Sulfonamides	EB2130850--036	0861_MW033_211027	**Perfluorooctane sulfonamide (FOSA)**	754-91-6	141 %	59.0-135%	**Recovery greater than upper data quality objective**
EP231D: (n:2) Fluorotelomer Sulfonic Acids	EB2130850--036	0861_MW033_211027	**10:2 Fluorotelomer sulfonic acid (10:2 FTS)**	120226-60-0	144 %	70.0-130%	**Recovery greater than upper data quality objective**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIVED CONDITION

Date samples received:	29-OCT-2021
Sample received in good order:	Yes
NMI Quotation no. provided:	QLD_0861_PFASOMP
Client purchase order number:	60612563_3_1
Temperature of samples:	Chilled
Comments:	
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work.

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

REPORT OF ANALYSIS

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

to
N21/024170

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program (OMP) (Defence, 2020) at the Royal Australian Airforce (RAAF) Base Amberley (the 'Site') and the Management Area in the South Queensland Region. The locations of the Site and Management Area are shown on **Figure 1** in **Appendix A**.

The OMP for RAAF Base Amberley (Defence, 2020) includes the following sampling events:

- Biannual groundwater, surface water and sediment sampling in April and October in 2020, 2021, and 2022.

Following each biannual sampling event, sampling event factual reports will be prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the biannual sampling event completed in March / April 2022, specifically highlighting first time detections and/or first-time exceedances of human health screening criteria for PFHxS+PFOS and / or PFOA.

This report has been prepared in accordance with the *PFAS OMP Factual Reports Guidance,* v 0.2, May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PFAS Management Area Plan (PMAP); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at each property.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works was to implement the scope of works for the March/April 2022 sampling event in accordance with the sampling analysis and quality plan (SAQP) (AECOM, 2022a).

2.0 Scope of Work

The sampling event at RAAF Base Amberley was completed in general accordance with the SAQP (AECOM, 2022a). In summary, the scope of works for this sampling event included:

- Obtaining access to private properties where some groundwater sampling locations are situated.
- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
  - PFAS National Environmental Management Plan (NEMP) V2.0 (HEPA, 2020);
  - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
  - Defence Routine Environment Water Quality Monitoring Manual;
  - AS/NZ 5667:1998 Water quality – Sampling;
  - Australian and New Zealand Guidelines for Fresh and Marine Water Quality; and
  - Relevant State regulatory guidelines.
- Gauging of groundwater elevation in 40 monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations).
- Collection of groundwater samples at 40 locations including 34 on-Site monitoring wells and six off-Site monitoring well locations. Details are included in **Table 1** below and **Figure 2** in **Appendix A**.
- Collection of co-located surface water and sediment samples at 49 locations, including 42 on-Site locations, and seven off-Site locations (refer below to **Table 2** and **Table 3** and **Figure 3** in **Appendix A**). It is noted that one surface water sample could not be collected during this sampling event. Refer to **Table 8** for more details.
- Downloading groundwater level data from data loggers installed in seven groundwater monitoring wells (MW025, MW028, MW032, MW055S, MW055D, MW056S, MW056I), refer to **Figure 2** in **Appendix A** for data logger locations. It is noted that data could not be downloaded from the logger installed in MW032, refer to **Table 8** for more details.
- Collection of intra- and inter- laboratory duplicate samples at a rate of 1 in 10 primary samples, one field blank sample per day, one rinsate sample per fieldwork day and one trip blank per batch.
- Analysis of all samples for the PFAS suite at the standard limit of reporting (LOR).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of results letters for off-Site stakeholders.
- Preparation of this Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Location		Monitoring Wells
Source Areas	Former Topside Aviation Fire Training Area (FTA) and current FTA Fire Pad (Confirmed Primary Source Area [CPSA] A)	MW002, MW033
	B Hangar 410 and Former Landfill	MW047
	Frogs Hollow Former Fire Training School Location (CPSA B)	MW037
	Sewage Treatment Plant (CPSA D)	MW021, MW032
	Historical Containment Pond (CPSA E)	MW048
	Former Fire Training Area and Operational Testing Area (CPSA G)	MW050
	Former Fire Training Area and Operational Testing Area (CPSA J)	MW005
	Potential Former Fire Training Area and Operations Test Area (CPSA L)	MW006, MW023, MW028, MW029, MW036
	Former Fuel Farm 1 and Triple Interceptor Pit (CPSA M)	MW309
	Potential Location of Aircraft F-4E Incident (CPSA T)	MW035
	AFFF Wastewater Holding Tank (CPSA V)	MW046
	Fire Fighting Training School (CPSA W)	MW026, MW030, MW031, MW042, MW043
	Former Structural and Open Pit Fire Training Area and Former Secondary Fire Training Area (CPSA X and Y)	MW041
	Fuel UST with AFFF listing (CPSA Z)	MW020
	Triple Interceptor Pits at Engine Test Cell Facilities 1 and 2 (CPSA AA)	MW007
	Areas used for irrigation – former grassed runways (CPSA BB)	MW012
	Former Landfill (CPSA CC)	MW022
	Former Fire Training Area on Disused Runway (CPSA DD)	MW049
Off-Site Warrill Creek		*MW054S, MW054D,* MW057S, MW057I
On-Site Bremer River		MW024, MW025, MW034, MW044, MW055S, MW055D
Off-Site Bremer River		MW056S, MW056I

Note: *Italics* indicates that the well is located on private property.
Wells with S, D or I are adjacent monitoring wells that are screened in different aquifers. 'S' indicates the well is screened in the shallow aquifer, 'D' or 'I' indicates the well is screened in the deeper aquifer. MW056I and MW057I were previously known as MW056D and MW057D.
MW002 was formerly known as MW2.

Table 2 Surface Water Sampling Locations

Area	Surface Water Sampling Locations	Number of Locations
On-Base Drains	SW002, SW003, SW008, SW011, SW021, SW027, SW028, SW030, SW033, SW037, SW038, SW041, SW048, SW049, SW053, SW056, SW059, SW064, SW067, SW076, SW079, SW080	22
Warrill Creek	SW004, SW005, SW009, SW015, SW016, SW018, SW020, SW026*, SW034, SW043*, SW099, SW100	12
Bremer River	SW025*, SW036, SW039*, SW040*, SW045*, SW047, SW050, SW051, SW052, SW088, SW089, SW090, SW091, SW094, SW098*	15

Note: * denotes off-Site sampling location.

Table 3 Sediment Sampling Locations

Area	Sediment Sampling Locations	Number of Locations
On-Base Drains	SD002, SD003, SD008, SD011, SD021, SD027, SD028, SD030, SD033, SD037, SD038, SD041, SD048, SD049, SD053, SD056, SD059, SD079, SD064, SD067, SD076, SD080	22

Note: * denotes off-Site sampling location.

3.0 Methodology

The methodology used for the March/April 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised below. Deviations from the SAQP are discussed in **Section 3.6**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater was measured in each monitoring well using an interface probe prior to the installation of HydraSleeves™, or if HydraSleeves were already installed, prior to retrieval of the HydraSleeve. Gauging was conducted in as short a time as possible, however, due to the number of wells and different requirements for accessing the monitoring well locations, the gauging took place over several days. Water level transducers are installed in seven monitoring wells to continuously record groundwater levels. A barometric logger is installed in MW028. Data collected since the previous OMP sampling event in October 2021 was downloaded.
Field parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for all groundwater samples. Field parameters were obtained before sampling. The probe on the water quality meter was decontaminated prior to being placed in the water sample.
Sampling methodology	Groundwater samples were collected from the majority of monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round. Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in 19 of the monitoring wells in preparation for the next sampling round. HydraSleeves were not installed in 21 monitoring wells as they are regularly used for monitoring on other programs.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for analysis for the PFAS suite using the standard limit of reporting. ALS Environmental (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for groundwater analyses are certified by the National Association of Testing Authorities (NATA). Chain of custody (COC) forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.2 Surface Water Sampling Methodology

The methodology used for the March / April 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Field parameters	Temperature, EC, DO, ORP, pH and observations of water quality were recorded for all surface water samples.
Sample Collection Methodology	Samples were collected from immediately below the water surface to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory supplied container was lowered into the water with the cap immediately applied once the container was full.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QAQC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard limit of reporting. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for surface water analyses were certified by the NATA. Chain of custody forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.3 Sediment Sampling Methodology

The methodology used for the March/April 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sample Collection Methodology	Samples representative of potentially deposited sediments were collected from within the water body where possible. Sediment samples were collected by hand using new laboratory supplied nitrile gloves and a new laboratory supplied container at each location.
Logging	Sediment characterisation details were recorded for each sample.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QAQC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard limit of reporting. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for sediment analyses were certified by the NATA. Chain of custody forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset includes the following:

- PFAS NEMP, V2.0 (HEPA, 2020);
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia,* September 2019;
- National Health and Medical Research Council (NHMRC), 2019. Guidance on PFAS in Recreational Water, August 2019 (NHMRC, 2019);
- National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2022a), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** below.

Table 7 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking water – groundwater	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). *All groundwater results will be compared to these criteria.*
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values are from NHMRC (2019). *All surface water results will be compared to these criteria.*
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater (95% species protection values)	PFOS	0.13 µg/L	*The values are from the PFAS NEMP* (HEPA, 2020). *All surface water and groundwater results will be compared to these criteria.*
	PFOA	220 µg/L	
Freshwater (99% species protection values)	PFOS	0.00023 µg/L	
	PFOA	19 µg/L	

There are no current HEPA (2020) endorsed human health or ecological guideline values available for PFAS in sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2022a).

Data validation assessment is provided in **Appendix C**. Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are

representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence Esdat database in accordance with Defence Contamination Management Manual (Defence, 2018) Annex L Guidance on Data Management (amended 2021) requirements.

3.6 Deviations from the SAQP

Table 8 lists the deviations from the SAQP (AECOM, 2022a) during this sampling event. The deviations are considered to be of low significance and have a minimal impact on the sampling event results.

Table 8 Deviations from the SAQP during sampling event for March/April 2022

SAQP	March/April 2022 Sampling Event
Collection of surface water samples at 49 locations	• A sample was not collected from SW067 as this location was dry during the sample visit. As the location was dry, there was no PFAS migrating in surface water at the time of the visit.
Download of data from seven data loggers	• Water level transducer data from the logger installed in MW032 could not be downloaded as the logger had ceased operation. Data at all other locations were downloaded.
Collection of sediment samples from 49 locations	• Sediment samples were collected by grab sample using a clean pair of nitrite gloves rather than being collected using a trenching shovel or piston sampler, which are specified in the SAQP (AECOM, 2022a). There is not considered to be any impact on the sample results due to the change in sampling technique.
Collection of field parameter data	• The SAQP does not specify whether field parameters should be collected before or after collection of the water sample. During the sampling event, all field measurements were collected before sampling. The probe on the water quality meter was decontaminated prior to measurements being collected from each water sample.

4.0 Field Observations and Results

The March/April 2022 sampling event was completed between 28 March and 6 April 2022. The results are summarised in following sections.

4.1 Groundwater

4.1.1 Groundwater Observations and Field Measurements

Table 9 Groundwater Observations and Field Measurements

Item	Details
Access	All monitoring wells were accessible.
Monitoring Well Network	No on-Site or off-Site monitoring wells were noted to be damaged during the fieldworks.
Field Observations	Groundwater from three monitoring wells had a sulfur odour (MW57I, MW044 and MW002). Groundwater from two monitoring wells had a septic odour (MW056S and MW056I). No other visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells. Field observations are presented in **Table T1** in **Appendix B**.
Depth to Groundwater	Depth to groundwater in the Alluvium was between 2.995 and 15.33 metres below top of casing (mbtoc). Depth to groundwater in the Tertiary Formation was between 4.95 and 16.109 mbtoc. Depth to groundwater in the Walloon Coal Measures was between 5.315 and 24.14 mbtoc. Groundwater elevation in the Alluvium was between 9.783 and 17.725 mAHD. Groundwater elevation in the Tertiary Formation was between 16.545 and 28.795 mAHD. Groundwater elevation in the Walloon Coal Measures was between 14.056 and 36.638 mAHD. Groundwater gauging data are presented in **Table T1** in **Appendix B**. Water level transducer results for six monitoring wells are presented in **Appendix G**.
Groundwater Flow Direction	Inferred groundwater contours and groundwater flow directions at the Site in March/April 2022 for the Alluvium/Tertiary Formation are shown on **Figure 4** in **Appendix A**. The inferred local groundwater flow direction is towards the northeast and east in the direction of the Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2022b). Inferred groundwater contours and groundwater flow directions at the Site in March/April 2022 for the Walloon Coal Measures are shown on **Figure 4** in **Appendix A**. The inferred local groundwater flow direction is towards the east in the direction of the Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2022b).

</table>
The measured parameter ranges are consistent with previous sampling event results (AECOM 2022b).</td></tr>
<tr><td>Weather Conditions</td><td>Weather conditions during groundwater sampling were generally hot with rain during March and humid weather during April. A total of 59.4 mm of rainfall was recorded during the sampling period from 28 March – 6 April 2022 (Bureau of Meteorology (BOM) station 040004 – ‘Amberley AMO).</td></tr>
<tr><td>Estate Management Works or Training Activities</td><td>During the sampling event no notable estate works or training activities were observed in the vicinity of sampling locations or are known to have taken place in the six months prior to the sampling event, which may have had a material impact upon the sampling event and analytical data.</td></tr>
</table>

4.1.2 Groundwater Analytical Results

The groundwater analytical results for PFAS from this sampling event are presented in **Table T2** in **Appendix B**.

Concentrations of sum of PFHxS and PFOS in 24 of the 40 groundwater samples exceeded the drinking water guideline value with six samples exceeding the PFOA guideline.

PFAS were detected above the limit of reporting in 27 of the 40 groundwater samples collected. All 27 groundwater samples that exceeded the limit of reporting exceeded the ecological guideline for PFOS for 99% protection of ecosystems with 21 of these samples also exceeding the 95% protection guideline value. One groundwater sample (MW046) exceeded the PFOA ecological guideline for 99% protection of freshwater species, but this sample did not exceed the 95% protection guideline.

First-time detections and exceedances from the historical dataset are recorded in **Table 10** below.

Table 10 First-time detections or exceedances of sum of PFHxS+PFOS or PFOA in groundwater

First time detection / exceedance	Ground-water Sampling location	Sum of PFHxS+PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		March/April 2022	Historical maximum	March/April 2022	Historical maximum
First time detections of PFHxS+PFOS or PFOA in groundwater	MW054S	0.24	0.14	0.01	<0.01
	MW057S	0.67	0.2	0.04	<0.01
First time exceedances of PFHxS+PFOS or PFOA in groundwater	MW030	5.43	3.41	0.57	0.33

Note: Blue shading indicates a sample with a first-time detection of PFOS+PFHxS or PFOA
Yellow shading indicates a sample with a first-time exceedance above human health drinking water guideline values (refer to **Table 7**).

The first-time detections of PFOA in the samples from MW054S and MW057S were equal or close to the laboratory limit. PFAS is known to be present in groundwater at these locations and PFHxS and PFOS have been frequently detected in samples from these wells during historical sampling events.

The first-time exceedance of PFOA in the sample from MW030 marginally exceeded the human health drinking water guideline value. The concentration of sum of PFHxS and PFOS in this monitoring well has consistently exceeded the drinking water guideline value during historical sampling events.

4.2 Surface Water

4.2.1 Surface Water Observations and Field Measurements

Table 11 Surface Water Observations and Field Measurements

<table>
<tr><th>Item</th><th>Details</th></tr>
<tr><td>Access</td><td>All surface water sampling locations were accessed during the sampling event, with the exception of SW067, that was dry.</td></tr>
<tr><td>Field Observations</td><td>No visual or olfactory indications contamination were observed during the sampling of the other surface water sampling locations. Field observations are reported in Table T3, Appendix B.</td></tr>
<tr><td>Surface Water Quality Parameter Field Measurements</td><td>Surface water quality parameters were measured prior to collecting surface water samples. The readings are presented in Table T3 in Appendix B and are summarised below:
<table>
<tr><th>Unit</th><th>Parameter</th><th>Min</th><th>Max</th><th>Comment</th></tr>
<tr><td>Drain</td><td>DO (mg/L)</td><td>0.3</td><td>9.8</td><td>Poorly to well oxygenated</td></tr>

<tr><td></td><td>Temperature (°C)</td><td>22.3</td><td>25.2</td><td>-</td></tr>
</table>
The measured parameter ranges are consistent with previous sampling event results (AECOM 2021b).</td></tr>
<tr><td>Weather Conditions</td><td>Weather conditions during surface water sampling were generally hot with rain during March and humid weather during April. A total of 59.4 mm of rainfall was recorded during the sampling period from 28 March – 6 April 2022 (Bureau of Meteorology (BOM) station 040004 – ‘Amberley AMO).</td></tr>
<tr><td>Estate Management Works or Training Activities</td><td>During the sampling event no notable estate works or training activities were observed in the vicinity of sampling locations or are known to have taken place in the six months prior to the sampling event, which may have had a material impact upon the sampling event and analytical data.</td></tr>
</table>

4.2.2 Surface Water Analytical Results

The analytical results for PFAS in surface water from this sampling event are presented in **Table T4** in **Appendix B**. There were one first-time exceedances of the adopted human health or ecological guidelines compared to the historical dataset. There were no first-time detections of PFHxS+PFOS and PFOA. First-time detections and exceedances from the historical dataset are recorded in **Table 12** below.

Table 12 First-time detections or exceedances of sum of PFHxS+PFOS or PFOA in surface water

First time detection / exceedance	Surface water Sampling location	Sum of PFHxS+PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		March/April 2022	Historical maximum	March/April 2022	Historical maximum
First time exceedances of PFHxS+PFOS or PFOA in surface water	SW094	2.27	1.88	0.12	0.10

Note: Yellow shading indicates a sample with a first-time exceedance above human health recreational water guideline values (refer to **Table 7**).

The first-time exceedance of sum of PFHxS and PFOS in the sample from SW094 marginally exceeded the human health recreational water guideline value. The concentration of sum of PFHxS and PFOS in this surface water sample has been reported marginally below the guideline value during historical sampling events.

Concentrations of sum of PFHxS and PFOS in 13 of the 48 surface water samples exceeded the recreational water guideline value with none of the samples exceeding the PFOA guideline. All 38 surface water samples that exceeded the limit of reporting exceeded the ecological guideline for PFOS for 99% protection of ecosystems with 21 of these samples also exceeding the 95% protection guideline value. None of the samples exceeded the PFOA ecological guidelines for either 95% or 99% protection of freshwater species.

4.3 Sediment

4.3.1 Sediment Observations and Field Measurements

Table 13 Sediment Observations

Item	Details
Access	All sediment sample locations were accessible.
Field Observations	Sediment logging data are presented in **Table T5** in **Appendix B**. No visible or olfactory indications of contamination were observed during sampling at the sediment sampling locations.
Weather Conditions	Weather conditions during sediment sampling were generally hot with rain during March and humid weather during April. A total of 59.4 mm of rainfall was recorded during the sampling period from 28 March – 6 April 2022 (Bureau of Meteorology (BOM) station 040004 – 'Amberley AMO).
Estate Management Works or Training Activities	During the sampling event no notable estate works or training activities were observed in the vicinity of sampling locations or are known to have taken place in the six months prior to the sampling event, which may have had a material impact upon the sampling event and analytical data.

4.3.2 Sediment Analytical Results

The analytical results for PFAS in sediment from this sampling event are presented in **Table T6** in **Appendix B**. Compared to the historical dataset there was one first-time detection. This was in the sample from SD089 (0.0002 mg/kg).

5.0 Summary and Next Sampling Event

5.1 Summary of Monitoring Event

A groundwater, surface water and sediment monitoring event was completed within the RAAF Base Amberley Management Area between 28 March and 6 April 2022. The program included sampling of groundwater from 40 monitoring wells and 49 co-located surface water and sediment sampling locations. Forty of the monitoring wells, and 48 of the surface water locations and all 49 sediment locations were able to be sampled.

Table 14 summarises the findings of the March / April 2022 sampling event and the recommended actions.

Table 14 Summary of Sampling Event

Item	Comment	Recommended Actions
Access to sampling locations	All groundwater sampling locations were accessible. A surface water sample was not collected from SW067 as this location was dry. All sediment sampling locations were accessible.	Sampling of on-Site drains should continue to be timed to occur after a rainfall event.
Groundwater level loggers	The groundwater level logger deployed in MW032 appears to have failed.	Deployment of a new logger in MW032.
Monitoring well network condition	No issues were identified in the 40 monitoring wells sampled.	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2022 which will identify the sampling program after the October 2022 sampling event.
Analytical Results	Sum of PFHxS and PFOS or PFOA concentrations in 37 of 40 groundwater samples were consistent with historical results. Sum of PFHxS and PFOS or PFOA concentrations in 47 of 48 surface water samples collected were consistent with historical results. Sum of PFHxS and PFOS or PFOA concentrations in all 49 sediment samples were consistent with historical results.	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2022 which will identify the sampling program after the October 2022 sampling event.
First-time detections of Sum of PFHxS and PFOS or PFOA	Two first-time detections of PFOA were recorded in the groundwater samples from MW054S and MW057S, however, other PFAS including PFHxS and PFOS have been consistently detected in samples from these wells. No first-time detections of sum of PFHxS and PFOS or PFOA above the laboratory limit of reporting were recorded in any of the surface water samples collected. There was one first-time detection of sum of PFHxS and PFOS in	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2022 which will identify the sampling program after the October 2022 sampling event.

Item	Comment	Recommended Actions
	the sediment sample from SD089, which was equal to the limit of reporting.	
First time exceedance of NEMP guideline values	There was one first-time exceedance of the NEMP (HEPA, 2020) drinking water guideline value in groundwater. This was in the sample from MW030 where PFOA was recorded slightly exceeding the guideline value. However, sum of PFHxS and PFOS concentrations have consistently exceeded the guideline value in previous samples collected from this well. There was one first-time exceedance of the recreational water guideline value in surface water. This was in the sample from SW094 where the concentration of sum of PFHxS and PFOS slightly exceeding the guideline value.	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2022 which will identify the sampling program after the October 2022 sampling event.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for October 2022.

5.3 Upcoming Annual Interpretive Report

The next annual interpretative report is scheduled for February 2023.

Notes
mbtoc - metres below top of casing
mAHD - metres above Australian Height Datum
TOC - top of casing
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius

LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
NHMRC is National Health Medical Research Council
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values

Notes
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius

LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
NHMRC is National Health Medical Research Council
Denotes new exceedance of human health guideline values

Property ID	Location ID	Sample Date	Sample Description	Odour	Notes on River Conditions
0861	SD002	28/03/2022	silty CLAY, dark grey	No odour	Manmade drainage channel around 10m width, running west to east. Water is shallow, ~0.1m depth, pooled, clear with bright green algae and aquatic plants. Long grass in channel. Sediment slug to the east of the culvert.
0861	SD003	28/03/2022	silty CLAY, dark grey	No odour	Wide and deep drainage channel, draining north west from the airstrip. Around 40m width and 10m depth. Steep eroded bank to the south west. Heavily vegetated channel with grass, reeds and trees. Reenforced north east bank with large angular boulders.
0861	SD004	29/03/2022	CLAY, brown, grey	No odour	Abundant woody debris in river channel. Eroded southern bank. Brown, flowing water, around 0.5m depth. Flowing west to east. Evidence of flooding (stacked debris).
0861	SD005	29/03/2022	CLAY, brown, grey	No odour	Brown, flowing water (west to east). Appears to be around 0.5m maximum depth. Clear, brown water with fish present. Established riparian vegetation on north bank. Steep eroded southern bank with no riparian vegetation, followed by grassed floodplain to the south. Woody debris within river channel.
0861	SD008	28/03/2022	silty CLAY, dark grey	No odour	Still, pooled water with gently sloping grassed banks. Reeds and grass within channel. Flows west to east. Maximum 1m depth. Maximum 5m width.
0861	SD009	29/03/2022	CLAY, brown, grey	No odour	Slowly flowing, west to east, slightly cloudy, brown water. Around 1m depth, and around 10m width. Vegetated sediment island within creek with established trees and grasses. Woody debris within channel. Fish present. Southern bank issteep and eroded with no vegetation. North bank is gradually sloping.
0861	SD011	28/03/2022	SAND, dark brown	No odour	Shallow, slowly flowing drainage channel. <40 cm maximum depth. No riparian vegetation. Grassed banks. Cobble reenforcement of banks. Aquatic plants in drain.
0861	SD015	29/03/2022	CLAY, brown, grey	No odour	Gently flowing west to east. Slightly cloudy water. ~0.3m depth. Heavily vegetated on north bank with established trees and native grasses. Gently sloping north bank. South bank is steep with visible erosion and less vegetation.
0861	SD016	1/04/2022	silty CLAY	No odour	Still, clear water, brown in colour. Established riparian vegetation on north bank. Woody debris within channel. Fish observed in creek. Rubbish filled embankment ~20m north consists of concrete slabs, construction material, steel debris.
0861	SD018	29/03/2022	CLAY, brown, grey	No odour	Clear, gently flowing water W to E. Approximately 0.3m depth. Wood debris in river channel. Large angular cobbles in channel (~30 cm). Well vegetated on both banks. Creek bed contains native grass vegetation. Lots of rubbish observed, including bottles, concrete, metal, and asbestos. Construction rubble in creek channel.
0861	SD020	29/03/2022	CLAY, brown, grey	No odour	Clear, still water. Heavily vegetated riparian banks to the north and south. Water gently flowing west to east. Water depth maximum 0.3m. Evidence of flooding (debris in trees).
0861	SD021	31/03/2022	clayey GRAVEL, brown	No odour	Shallow, pooled, still water around 0.2m maximum depth. Thick grass and vegetation surrounding sample location.
0861	SD025	28/03/2022	sandy CLAY, brown	No odour	Still pooled water. Flow direction south to north evidenced by debris build up. Black water with small aquatic surface water plants. Depth >1m, width ~20m. Sparcely vegetated banks. Gradual sloping banks (<10°), with steep drop at waters edge.
0861	SD026	29/03/2022	silty CLAY	No odour	Still, pooled, deep water. Very narrow channel, around 2m width. Heavily vegetated banks with native grasses and well established trees. Steep banks. Woody debris within and across the channel. Flow direction south to north.
0861	SD027	28/03/2022	SILT, dark brown	No odour	Heavily modified creek bed. Vegetated with reeds and trees. Flow direction east to west. Manmade cobble embankment to the south. Grassed, eroding bank to the north.
0861	SD028	29/03/2022	CLAY, brown, grey	No odour	Pooled water channel with aquatic plants on the surface. Fish and tadpoles present. Long grass surrounding the channel (~1m high). No riparian vegetation. Relatively flat catchment (<5°) surrounding the channel. Water is black. Unable to see the bottom. Channel is ~ 2m width, and around 0.5m maximum depth. Appears to flow west to east.
0861	SD030	28/03/2022	silty CLAY, gravels, brown	No odour	Drain beside road. Flat land surrounding. Manmade banks. No riparian vegetation. Grassed mown banks.
0861	SD033	1/04/2022	silty CLAY, brown	No odour	Gently flowing east to west. Man made channel capturing runoff from training area and release from new water treatment tanks. Ponds immediatley adjacent to the south. Currently empty. Channel bed contains large angular cobbles and reenforcement wire.
0861	SD034	29/03/2022	CLAY, brown, grey	No odour	Still brown water ~0.3m depth. Heavily vegetated riparian zones on both banks. Native grasses within channel. Rubbish observed in northern bank, including porcelain, glass, and rubber. Narrow drainage channel entering creek from the north to south at sample location.
0861	SD036	1/04/2022	silty CLAY	No odour	Pooled deep water in channel. Unable to see the bottom. Large established gums and trees in channel. Aquatic plants covering entire surface. Western bank vegetated with grass and trees. Eastern bank is gently sloping, vegetated with native grasses. Channel is within a regeneration area.
0861	SD037	30/03/2022	gravelly CLAY, brown grey	No odour	Minimal water <0.1m depth. Still, pooled, and stagnant water. Very shallow drainage channel with mown grassed banks. Tall reeds around 2m high within channel.
0861	SD038	30/03/2022	gravelly CLAY, brown	No odour	Still poolled water >1m depth, ~3m width. Appears to flow west to east (based on the gradient of the land). Large fish observed. Man made embankments with large angular cobble bank reenforcement. Water is clear with a brown/green colour. Aquatic plants on surface. Reeds on banks. Surrounded by open, mown, grassed area.
0861	SD039	28/03/2022	sandy CLAY, brown	No odour	Still pooled water beneath bridge. <0.2m depth. Large subangular boulders and cobbles within channel. Creek bed is vegetated with reeds and grasses and well established trees. Flow direction is S to N evidenced by woody debris within the creek.
0861	SD040	28/03/2022	sandy CLAY, brown	No odour	Large, deep, still dam, with brown coloured water. Around 20m width. Depth >1m. Heavily vegetated banks on both sides. Well established trees and native grasses on both gently sloping banks. Vegetated bank around 50m width on north side. Drainage channel entering the dam from the NW. Sample taken around 2m upstream of drainage channel.
0861	SD041	28/03/2022	sandy CLAY, brown	No odour	Clear, black, pooled, still water. Maximum 0.3m depth. Channel is heavily vegetated with tall reeds. Large angular boulders within channel.
0861	SD043	1/04/2022	silty CLAY, brown	No odour	Clear, flowing creek. Flowing south to north. Erosion channels on eastern bank beneath the bridge. Black cracking clays. Banks are well vegetated. Channel is around 5m width.
0861	SD045	29/03/2022	CLAY, brown, grey	No odour	Still, clear, brown water, flowing west to east. Small aquatic plants on surface. Well vegetated banks on both sides with native grasses and trees.Gently sloping banks with a steep drop off next to sampling point. Woody debris along banks.
0861	SD047	31/03/2022	silty CLAY, brown	No odour	Deep pooled water. Very steep bank on the western side. Channel around 40m width. Vegetated island with well established gums and trees within the river channel.
0861	SD048	28/03/2022	gravelly silty SAND, dark grey	No odour	Drainage leads from hangar to the north ~40m. Land slopes to the south west. Mowed grassed area.
0861	SD049	31/03/2022	silty CLAY, brown	No odour	Large dam at the bottom of a grassy slope. Around 100m diameter. Deep, still, brown water. Aquatic reeds surrounding the banks. Ducks and fish present. Slopes gently from the east to the west.
0861	SD050	1/04/2022	silty CLAY	No odour	Manmade drainage channel around 10m width, running W to E. Water is still and shallow. Around 0.2m depth. Banks are gently sloping and stabilised with large angular boulders. Aquatic plants within channel.
0861	SD051	1/04/2022	silty CLAY, brown	No odour	Deep pooled, still water. Flow direction N to S evidenced by flood debris in trees. Very steep embankment. Channel around 5m width. Green scum covering entire surface. Woody debris within channel. Overland flow across embankments evident with rubbish (corrugated iron) running W to E. Heavily vegetated banks with native grasses, reeds, and trees.
0861	SD052	31/03/2022	silty CLAY, brown	No odour	Still, pooled, deep water. Narrow channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are
0861	SD053	6/04/2022	silty CLAY, brown grey	No odour	Manmade drainage channel surrounding the runway. Water flowing south to north. Very shallow. Concrete base with 4 drains entering channel. Green
0861	SD056	28/03/2022	silty CLAY, dark grey	No odour	Flat surrounding land. Very gently sloping banks. Channel is around 2m maximum width. Depth around 0.2m max. Grassed mown banks. Reeds and aquatic plants within channel. Still, pooled water.
0861	SD059	28/03/2022	gravelly silty CLAY, brown	No odour	Manmade channel. Grassed and mown. Flat surrounding land. Large angular cobbles in drain.
0861	SD064	6/04/2022	silty CLAY, brown	No odour	Very shallow, narrow drainage channel bordering the runway. Mown grassed area surrounding sample location.
0861	SD067	6/04/2022	silty CLAY, brown	No odour	Small drainage channel. Concrete culvert contains dark green water. Culvert is covered with a grill. Very shallow channel. Mown grassed banks. Dry during visit.
0861	SD076	28/03/2022	silty CLAY, dark grey	No odour	Flat surrounding land. Very shallow banks. Channel is around 10m width. Very shallow water flowing east to west (~10cm). Channel vegetated with reeds around 1.5m high.
0861	SD079	6/04/2022	silty CLAY, brown grey	No odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Very tall reeds in channel. Green and brown algae in channel. No flow. Shallow. Around 0.2m depth. Very gently sloping mown grassed banks.
0861	SD080	6/04/2022	silty CLAY, brown grey	No odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Sediment build up on the southern side of the culvert. Very gently sloping mown grassed banks.
0861	SD088	31/03/2022	silty CLAY, brown	No odour	Deep, wide channel. Entire surface is covered with small aquatic plants. Gently sloping vegetated banks. Woody debris within channel. Flow direction is west to east.
0861	SD089	31/03/2022	silty CLAY, brown	No odour	Still, pooled, shallow water. Entire surface is covered with small aquatic plants. Woody debris across channel. Fallen trees across the banks. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD090	31/03/2022	silty CLAY, brown	No odour	Still, pooled, deep water. Channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are heavily vegetated. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD091	31/03/2022	silty CLAY, brown	No odour	Still, pooled, clear water. Small aquatic plants on surface. Woody debris within creek channel. Fallen trees across channel. Channel around 3m width. Water around 0.3m depth. Heavily vegetated banks. Banks are fenced off for regeneration. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD094	1/04/2022	silty CLAY	No odour	Shallow, pooled water in creek channel. Not flowing, clear, brown. Large woody debris within channel. Vegetated banks. Steep easterly bank, gently sloping on the west. Western bank is a revegetation area. Flow direction is north to south, evidenced by flood debris within the channel. Drainage channel entering the creek from the northwest to southeast. Heavily eroded.
0861	SD098	1/04/2022	silty CLAY	No odour	Still pooled water beneath bridge. ~0.5m depth. Clear, with a brown colour. Water flow north to south evidenced by debris build up within creek. Film of white/green substance on water surface. Geofab on embankments. Vegetated banks on both sides with native grass and trees.
0861	SD099	29/03/2022	CLAY, brown, grey	No odour	Deep, wide channel. Brown, turbid water. Gently flowing south to north. Woody debris along banks. Grassed bank to the west. Vegetated with well established trees to the east.
0861	SD100	29/03/2022	CLAY, brown, grey	No odour	Deep, narrow channel, gently flowing east to west. Clear, green/brown colour. Flood debris in trees and on banks. Very steep north bank. Long grass and vegetation on south bank.

DATA VALIDATION REPORT

Project No.:	60612563	**Validation by:** KM	**Date:** 5/05/2022
Client:	Department of Defence		
Site:	Royal Australian Airforce Base, Amberley		
Matrix type:	Groundwater, surface water, sediment	**Data verified by:** JP	**Date:** 10/05/2022
No. of primary samples:	40 groundwater, 48 surface water, 49 sediment		
Laboratory:	ALS (Brisbane), NMI (Sydney)	**Project Manager:** JP	
Lab reference:	EB2209940; EB2209942; EB2209946; EB2209950; EB2209951; AECO06_220411 (RN1349008)		

Key Issues:	No key QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.

Field QA/QC

Sampling personnel	Sampling was conducted by AECOM environmental scientists between 28 March and 7 April 2022.
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report and as presented in the SAQP. Sediment samples were collected as grab samples using a clean nitrile glove rather than using a trenching shovel or piston sampler. The different technique is not expected to impact sample quality. Field parameters were measure using a water quality meter prior to sample collection. The probe on the water quality meter was decontaminated prior to use. The SAQP does not specify whether field parameters should be collected before or after sample collection. The method used is not expected to impact sample collection.
Chain of Custody	COC documents completed as per AECOM procedures.
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per day of sampling where appropriate (nine in total) during the monitoring between 28 March to 7 April 2022. Rinsates were collected from the decontaminated interface probe. Concentrations reported below the LOR for all analytes tested. See Table C1.
Field Blanks	Field blank samples were collected at a frequency of one per day of sampling (nine in total between 28 March to 7 April 2022) by filling sample containers with laboratory supplied deionised water in the field. All field blanks reported concentrations below the LOR for the analytes tested. See Table C1.
Trip Blanks	Trip blank samples were present during the transport of samples during the sampling between 28 March to 7 April 2022 for the primary laboratory samples. Two water trip blanks and two soil trip blanks all reported concentrations below the LOR, see Table C2.
Frequency of field QC	Field duplicate (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected. There were five duplicates/triplicate sets for groundwater, surface water and sediment (see Tables C3, C4 and C5). The frequency of field QC achieves the expected frequency for each media type. The target frequency of one in ten primary samples was achieved for all matrices.

Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. All samples were received at the laboratory in appropriate sample containers with no sample container non-compliances noted.
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	The laboratory reported a sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except: • Matrix spikes and laboratory duplicates (water) for PFAS (both 0.00%) which is below the expected rate of 5.0% (for matrix spikes) and 10.00% (duplicates) in EB2209942 (38 samples in batch). • EB2209942 - laboratory duplicates (water) for PFAS (0.00%) which is below the expected rate of 10.00%. Matrix spikes (water) for PFAS (0.00%) was below the expected rate of 5.0%. • EB2209946- laboratory duplicates (water) for PFAS (6.67%) which is below the expected rate of 10.00%. • EB2209950 -Laboratory duplicates (water) for PFAS (7.35%) which is below the expected rate of 10.00% in the batch. Matrix spikes (water) for PFAS (4.41%) which is below the expected rate of 5.00%. (68 samples in batch) • EB2209940 - Laboratory duplicates (water) and matrix recoveries for PFAS (8.33% and 0.00%) which is below the expected rates of 10.00% and 5.0%, respectively, in the batch (12 samples in batch) • EB2209951- Laboratory duplicates (water) for PFAS (6.90%) which is below the expected rate of 10.00% in the batch (29 samples in batch) • EB2209951- Matrix spikes (water) for PFAS (3.45%) which is below the expected rate of 5.00% in the batch (29 samples in batch). The reason for insufficient matrix spikes and laboratory duplicates is unknown as the laboratory was provided with sufficient sample volume across the project batches, however as all other QC results met control limits this is not expected to impact data quality.
Method Blank	No method blank non-compliances were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples.
Laboratory control spike recovery	All Laboratory Control Spikes (LCS) recoveries (where reported) were within control limits, except: • EB2209942 (soil): LCS recovery for PFPeS, PFHpS, PFBA, PFTeDA, MeFOSE, EtFOSE and 10:2 FTS in lab sample QC-4279450-002 was greater than the upper control limit. • EB2209946 (soil): LCS recovery for PFPeS, PFHpS, PFBA, PFTeDA, MeFOSE, ETFOSE and 10:2 FTS in lab sample QC-4284050-002 was greater than the upper control limit. • EB2209946 (water): LCS recovery for PFHpS, PFTeDA, MeFOSAA, 8:2 FTS and 10:2 FTS in lab sample QC-4284050-002 was greater than the upper control limit. • EB2209951 (soil): LCS recovery for PFPeS, PFHpS, PFBA, PFTeDA, MeFOSE, EtFOSE and 10:2 FTS in lab sample QC-4279450-002 was greater than the upper control limit.

	• EB2209951 (water): LCS recovery for PFTeDA, MeFOSAA and EtFOSAA in lab sample QC-4281165-002 was greater than the upper control limit. LCS are known, interference free matrix spiked with target analytes or certified reference material. The purpose of this quality control type is to monitor precision and accuracy independent of sample matrix and to indicate if the analytical procedure is in control and evaluates the laboratory capability to report unbiased results. Although some non-conformances have been detected in a small number QC samples, the non-conformances do not include the key analytes, PFHxS and PFOS so the understanding of the concentrations of these compounds is not impacted.
Matrix spike recovery	All matrix spike (MS) recoveries (where reported) were within control limits, except: • EB2209946 (water): MS recovery for PFTeDA and MeFOSAA in lab sample EB2209946-018 was greater than the upper data quality objective. • EB2209950 (soil): MS recovery for PFHxS and PFOS in lab samples EB2209950-003 and EB2209950-045 could not be determined as the background level was greater than or equal to four times the spike level. MS recovery for PFDS, PFBA, PFNA, PFUnDA, PFTrDA, PFTeDA, FOSA, MeFOSA, EtFOSA, MeFOSE, EtFOSE, MeFOSAA, EtFOSAA, 4:2 FTS, 6:2 FTS and 8:2 FTS in lab sample EB2209950-045 was less than the lower data quality objective. • EB2209950 (water): MS recovery for PFHxS in lab sample EB2209950-047 and PFOS in lab samples EB2209950--014 and EB2209950--047 could not be determined as the background level was greater than or equal to four times the spike level. • EB2209951 (soil): MS recovery for PFHxS and PFOS in lab samples -45 was not determined as the background level was greater or equal to 4 x spike level. MS recovery for PFDS, PFBA, PFNA, PFUnDA, PFTrDA, PFTeDA in sample -045 was less than the lower data quality objective for 16 compounds. • EB2209951 (water): MS recovery for PFHxS and PFOS in lab sample EB2209951--013 could not be determined as the background level was greater than or equal to four times the spike level. This indicates that matrix interference may have occurred in isolated samples. These non-conformances are not expected to impact data quality.
Surrogate spike recovery	Surrogate spike recoveries were within control limits for all samples.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels except for PFOS for NEMP (HEPA, 2020) ecological guideline values for the 99% protection of freshwater species. The potential exists for concentrations of PFOS to be above the adopted guideline, but below the laboratory LOR. This should be taken into consideration when interpreting and using this data quantitatively where results are reported below LOR.
Field QAQC RPDs	RPDs for groundwater surface water and sediment samples are reported in Tables C3, C4 and C5 respectively. Field duplicate and triplicate RPDs were reported within control limits for all groundwater, surface water and sediment samples except the following (the sample with the higher concentration is in bold). • 0861_MW047_220330 and **0861_QC172_220330** for PFBS (55%), PFHpS (164%), PFHpA (161%), PFHxA (90%), PFPeS (127%), PFPeA (46%), PFOS (179%), PFOA (173%) and PFHxS (136%) • 0861_MW047_220330 and **0861_QC272_220330** for PFHpS (149%), PFHpA (135%), PFHxA (72%), PFPeS (86%), PFOS (165%), PFOA (159%) and PFHxS (130%)

	• **0861_MW057S_220404** and 0861_QC279_220404 for PFOS (70%) • 0861_SD002_220328 and **0861_QC167_220328** for PFOS (194%) • 0861_SD094_220401 and **0861_QC277_220401** for PFOS (70%) • **0861_SW003_220328** and 0861_QC168_220328 for PFOA (34%) • **0861_SW003_220328** and 0861_QC268_220328 for PFBS (39%), PFHpA (33%), PFHxA (37%), PFPeS (39%), PFOS (67%), PFOA (34%) and PFHxS (56%) • **0861_SW064_220406** and 0861_QC280_220406 for PFOS (37%) The RPD non-conformances are likely to be due to lack of mixing of samples, different extraction techniques used by the primary and secondary laboratories and heterogeneity in the solid samples. Where the QC samples highlighted above reported a higher concentration than the primary sample, the higher QC sample concentrations do not constitute a first-time detection of PFOA or PFHxS+PFOS or a new maximum of the same concentrations except for: • 0861_MW047_220330 and **0861_QC172_220330** where a new maximum of PFOA (2.37µg/L) and PFHxS + PFOS (71.1µg/L) was reported. Therefore, the elevated RPDs are not considered to affect data interpretation for use in this report. The higher concentration has however conservatively been adopted in the report tables. All remaining samples reported within the control limits.
Other	
Other observations	No other key observations were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

*RPDs have only been considered where a concentration is greater than 1 times the EQL

**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))

***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Dates

Date Samples Received	: 07-Apr-2022 14:00	Issue Date	: 09-Apr-2022
Client Requested Due Date	: 20-Apr-2022	Scheduled Reporting Date	: **20-Apr-2022**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 1	Temperature	: 7.8°C - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2209940**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Site	: ----	Issue Date	: 20-Apr-2022
Sampler	: ----	No. of samples received	: 2
Order number	: 60612563 3.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count QC	Count Regular	Rate (%) Actual	Rate (%) Expected	Quality Control Specification
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	12	8.33	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	12	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X - PFAS: Whole bottle extraction was not possible for sample "0861_MW054D_220405". Sample required dilution prior to extraction due to matrix interference (high sediment content). LOR values have been adjusted accordingly. The LOR of PFHxS & PFOS have been further raised due to additional matrix interference.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QUALITY CONTROL REPORT

Work Order	: **EB2209942**	Page	: 1 of 10
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: PO BOX 1307 FORTITUDE VALLEY QLD, AUSTRALIA 4006	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 11-Apr-2022
C-O-C number	: ----	Issue Date	: 21-Apr-2022
Sampler	: ----		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 37		
No. of samples analysed	: 37		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2209942**	Page	: 1 of 11
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: +[redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Site	: ----	Issue Date	: 21-Apr-2022
Sampler	: ----	No. of samples received	: 37
Order number	: 60612563 3.1	No. of samples analysed	: 37

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	QC-4279450-002	----	**Perfluoropentane sulfonic acid (PFPeS)**	2706-91-4	148 %	73.0-123%	**Recovery greater than upper control limit**

Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	38	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: High LCS recovery deemed acceptable as all associated analyte results are less than LOR
- EP231X PFAS: Whole bottle extraction was not possible for sample "0861_QC172_220330". Sample required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of PFUnDA for sample '0861_QC167_220328' (EB2209942-001) has been raised due to sample matrix interferences.
- EP231X PFAS: The LOR of PFDA for sample '0861_QC177_220401' (EB2209942-022) has been raised due to sample matrix interferences.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Client Requested Due Date	: 21-Apr-2022	Scheduled Reporting Date	: **21-Apr-2022**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 4	Temperature	: 7.8°c, 8.0°c, 7.3°c, 9.7°c - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 18 / 18

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 11/04/2022 As per email from [redacted] requesting sample IDs changed for samles 018, 008 & 007 alsong with PFAS analysis added to samples 015,016,017,018***
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2209946**	Page	: 1 of 8
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Site	: ----	Issue Date	: 21-Apr-2022
Sampler	: ----	No. of samples received	: 18
Order number	: 60612563 3.1	No. of samples analysed	: 18

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
[redacted]	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: The LOR of PFOS for sample “0861_SD043_220404” has been raised due to sample matrix interferences.
- EP231X PFAS: The high laboratory control standard recoveries are deemed acceptable as associated sample analyte results are less than the limit of reporting.
- EP231X PFAS: The high matrix spike recoveries for sample ‘0861_MW057I_220404’ (EB2209946-018) are deemed acceptable as associated sample analyte results are less than the limit of reporting.
- EP231X PFAS: The LOR of PFOS for sample ‘0861_SD098_220401’ (EB2209946-011) has been raised due to sample matrix interferences.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Client Requested Due Date	: 22-Apr-2022	Scheduled Reporting Date	: **22-Apr-2022**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 4	Temperature	: 8.0°c, 9.7°c, 7.3°c, 7.8°c - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 90 / 90

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 11/04/2022 as per emaill request from [redacted] to alter sample 91 ID and add PFAS Analysis.***
- **Please be advised that sample "0861_SD036_220401" was not received at the laboratory (denoted SNR on the scanned COC).**
- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work orders EB2209950/ EB2209951 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on ALSEnviro.Brisbane@alsglobal.com**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **An extra sample was received labelled as "0861_SD034_220401" (ALS #91) and has been placed on hold. If testing is required on this sample, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Address	: BRISBANE	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 11-Apr-2022
C-O-C number	: ----	Issue Date	: 27-Apr-2022
Sampler	: ----		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 90		
No. of samples analysed	: 90		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Inorganics, Stafford, QLD
	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2209950**	Page	: 1 of 16
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Site	: ----	Issue Date	: 27-Apr-2022
Sampler	: ----	No. of samples received	: 90
Order number	: 60612563 3.1	No. of samples analysed	: 90

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	6	58	**10.34**	**10.00**	✓	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	6	58	**10.34**	**10.00**	✓	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	58	**5.17**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	58	**5.17**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	3	58	**5.17**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work orders EB2209950/ EB2209951 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on ALSEnviro.Brisbane@alsglobal.com**
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X (PFAS): The LOR for particular samples have been raised due to matrix interference need dilution.
- EP231X PFAS: The LOR of particular analytes have been raised due to sample matrix interferences.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: Particular samples required dilution due to sample matrix. LOR values have been adjusted accordingly.
- EP231X PFAS: Whole bottle extraction was not possible for sample ‘0861_SW027_220328’ (EB2209950-004). Sample required dilution prior to extraction due to matrix interference (high level contaminants). LOR values have been adjusted accordingly.
- EP231X: PFAS: High LCS recovery deemed acceptable as all associated analyte results are less than LOR
- EP231X-(PFAS): Sample '0861_SD037_220330' (EB2209950-045) shows poor matrix spike recovery due to sample matrix interference. Confirmed by re-extraction and re-analysis.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

No. of coolers/boxes	: 4	Temperature	: 7.3°c, 9.7°c, 8.0°c, 7.8°c - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 27 / 27

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work order EB2209950/ EB2209951 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on ALSEnviro.Brisbane@alsglobal.com**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QUALITY CONTROL REPORT

Work Order	: **EB2209951**	Page	: 1 of 16
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: PO BOX 1307 FORTITUDE VALLEY QLD, AUSTRALIA 4006	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: ----	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 11-Apr-2022
C-O-C number	: ----	Issue Date	: 27-Apr-2022
Sampler	: ----		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 27		
No. of samples analysed	: 27		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2209951**	Page	: 1 of 10
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 07-Apr-2022
Site	: ----	Issue Date	: 27-Apr-2022
Sampler	: ----	No. of samples received	: 27
Order number	: 60612563 3.1	No. of samples analysed	: 27

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- **SPLIT WORK ORDER: It should be noted that ALS has split this work order over the following work order EB2209950/ EB2209951 due to the size of the sample numbers. For any further information regarding this processing of samples please contact ALS client services division on ALSEnviro.Brisbane@alsglobal.com**
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: The LOR of particular analytes have been raised due to sample matrix interferences.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: Sample "0861_SD079_220406" required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. Particular analytes have been further raised due to matrix interferences.
- EP231X PFAS: The LORs of PFOS and PFDS for sample '0861_SD099_220329' (EB2209951-025) have been raised due to sample matrix interferences.
- EP231X-(PFAS): Sample shows poor matrix spike recovery due to sample matrix interference. Confirmed by re-extraction and re-analysis.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

SAMPLE RECEIVED CONDITION

Date samples received:	11-APR-2022
Sample received in good order:	Yes
NMI Quotation no. provided:	
Client purchase order number:	60612563_3_1
Temperature of samples:	Chilled
Comments:	
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

Results expressed in percentage (%) or mg/kg wherever appropriate.
Acceptable Spike recovery is 50-150%.
Maximum acceptable RPDs on spikes and duplicates is 40%.
'NA ' = Not Applicable.
RPD= Relative Percentage Difference.

REPORT OF ANALYSIS

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

to
N22/006505

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program (OMP) (Defence, 2020) at the Royal Australian Air Force (RAAF) Base Amberley (the 'Base') and the Management Area in the South Queensland Region. The locations of the Base and Management Area are shown on **Figure 1** in **Appendix A**.

The OMP for RAAF Base Amberley (Defence, 2020) includes the following sampling events:

- Biannual groundwater, surface water and sediment sampling in April and October in 2020, 2021, and 2022.

Following each biannual sampling event, sampling event factual reports will be prepared. Annual interpretive reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the biannual sampling event completed in October / November 2022[1], specifically highlighting first-time detections and/or new exceedances of human health screening criteria for perfluorohexane sulfonate (PFHxS) + perflurooctanesulfonic acid (PFOS) and / or perflurooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Reports Guidance,* v 0.2, May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PFAS Management Area Plan (PMAP); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at RAAF Base Amberley.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works was to implement the scope of works for the October/November 2022 sampling event in accordance with the sampling analysis and quality plan (SAQP) (AECOM, 2022a).

[1] Due to heavy rainfall in October 2022, some locations were not accessible during the sampling event. A follow-up visit was conducted on 9 November 2022 to complete the sampling event. This sampling event is therefore referred to as October/November 2022.

2.0 Scope of Work

The sampling event at RAAF Base Amberley was completed in general accordance with the SAQP (AECOM, 2022a). In summary, the scope of works for this sampling event included:

- Obtaining access to private properties where some groundwater sampling locations are situated.
- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
  - PFAS National Environmental Management Plan (NEMP) V2.0 (HEPA, 2020);
  - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
  - Defence Routine Environment Water Quality Monitoring Manual, 2018;
  - Defence, Contamination Management Manual, 2018 amended 2021;
  - AS/NZ 5667:1998 Water quality – Sampling (Standards Australia 1998);
  - Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, 2018);
  - Relevant State regulatory guidelines.
- Gauging of groundwater elevation in 38 of 40 monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations). Two off-Base monitoring wells (MW056S and MW056I) were not accessible and could not be gauged, refer to **Table 8** for more details.
- Collection of groundwater samples at 38 of 40 locations including 34 on-Base monitoring wells and four off-Base monitoring well locations. Details are included in **Table 1** below and **Figure 2** in **Appendix A**. Two off-Base monitoring wells (MW056S and MW056I) were not accessible and could not be sampled, refer to **Table 8** for more details.
- Collection of co-located surface water and sediment samples at 45 of 49 locations, including 38 on-Base locations, and seven off-Base locations (refer below to **Table 2** and **Table 3** and **Figure 3** in **Appendix A**). Three surface water/sediment sampling locations (SD/SW011, SD/SW050 and SD/SW076) could not be collected during this sampling event. In addition, one sediment sample (SD009) and one surface water sample (SW028) were collected but not analysed. Refer to **Table 8** for more details.
- Downloading groundwater level data from data loggers installed in seven groundwater monitoring wells (MW025, MW028, MW032, MW055S, MW055D, MW056S, MW056I), refer to **Figure 2** in **Appendix A** for data logger locations. Dataloggers from two monitoring wells, MW056S and MW056I could not be downloaded due to access constraints, refer to **Table 8** for more details.
- Collection of intra- and inter- laboratory duplicate samples at a rate of 1 in 10 primary samples, one field blank sample per day, one rinsate sample per fieldwork day and one trip blank per batch.
- Analysis of all samples for the PFAS suite at the standard limit of reporting (LOR).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of results letters for off-Base stakeholders.
- Preparation of this Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Location		Monitoring Wells
Source Areas	Former Topside Aviation Fire Training Area (FTA) and current FTA Fire Pad (Confirmed Primary Source Area [CPSA] A)	MW002, MW033
	B Hangar 410 and Former Landfill	MW047
	Frogs Hollow Former Fire Training School Location (CPSA B)	MW037
	Sewage Treatment Plant (CPSA D)	MW021, MW032
	Historical Containment Pond (CPSA E)	MW048
	Former Fire Training Area and Operational Testing Area (CPSA G)	MW050
	Former Fire Training Area and Operational Testing Area (CPSA J)	MW005
	Potential Former Fire Training Area and Operations Test Area (CPSA L)	MW006, MW023, MW028, MW029, MW036
	Former Fuel Farm 1 and Triple Interceptor Pit (CPSA M)	MW309
	Potential Location of Aircraft F-4E Incident (CPSA T)	MW035
	AFFF Wastewater Holding Tank (CPSA V)	MW046
	Fire Fighting Training School (CPSA W)	MW026, MW030, MW031, MW042, MW043
	Former Structural and Open Pit Fire Training Area and Former Secondary Fire Training Area (CPSA X and Y)	MW041
	Fuel UST with AFFF listing (CPSA Z)	MW020
	Triple Interceptor Pits at Engine Test Cell Facilities 1 and 2 (CPSA AA)	MW007
	Areas used for irrigation – former grassed runways (CPSA BB)	MW012
	Former Landfill (CPSA CC)	MW022
	Former Fire Training Area on Disused Runway (CPSA DD)	MW049
Off-Base Warrill Creek		*MW054S, MW054D,* MW057S, MW057I
On-Base Bremer River		MW024, MW025, MW034, MW044, MW055S, MW055D
Off-Base Bremer River		MW056S, MW056I

Note: *Italics* indicates that the well is located on private property.
Wells with S, D or I are adjacent monitoring wells that are screened in different aquifers. 'S' indicates the well is screened in the shallow aquifer, 'D' or 'I' indicates the well is screened in the deeper aquifer. MW056I and MW057I were previously known as MW056D and MW057D.
MW002 was formerly known as MW2.

Table 2 Surface Water Sampling Locations

Area	Surface Water Sampling Locations	Number of Locations
On-Base Drains	SW002, SW003, SW008, SW011, SW021, SW027, SW028, SW030, SW033, SW037, SW038, SW041, SW048, SW049, SW053, SW056, SW059, SW064, SW067, SW076, SW079, SW080	22
Warrill Creek	SW004, SW005, SW009, SW015, SW016, SW018, SW020, SW026*, SW034, SW043*, SW099, SW100	12
Bremer River	SW025*, SW036, SW039*, SW040*, SW045*, SW047, SW050, SW051, SW052, SW088, SW089, SW090, SW091, SW094, SW098*	15

Note: * denotes off-Base sampling location.

Table 3 Sediment Sampling Locations

Area	Sediment Sampling Locations	Number of Locations
On-Base Drains	SD002, SD003, SD008, SD011, SD021, SD027, SD028, SD030, SD033, SD037, SD038, SD041, SD048, SD049, SD053, SD056, SD059, SD079, SD064, SD067, SD076, SD080	22
Warrill Creek	SD004, SD005, SD009, SD015, SD016, SD018, SD020, SD026*, SD034, SD043*, SD099, SD100	12
Bremer River	SD025*, SD036, SD039*, SD040*, SD045*, SD047, SD050, SD051, SD052, SD088, SD089, SD090, SD091, SD094, SD098*	15

Note: * denotes off-Base sampling location.

3.0 Methodology

The methodology used for the October/November 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised below. Deviations from the SAQP are discussed in **Section 3.6**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater was measured in each monitoring well using an interface probe prior to the installation of HydraSleeves™, or if HydraSleeves™ were already installed, prior to retrieval of the HydraSleeve™. Where water level transducers were installed, the well was gauged prior to the removal of the water level transducer. Gauging was conducted in as short a time as possible, however, due to the number of wells and different requirements for accessing the monitoring well locations, the gauging took place over several days. Water level transducers are installed in seven monitoring wells to continuously record groundwater levels (MW025, MW028, MW032, MW055S, MW055D, MW056S, MW056I). A barometric logger is installed in MW028. Data collected since the previous OMP sampling event in March 2022 were downloaded from MW025, MW028, MW055S and MW055D. Monitoring wells MW056S and MW056I could not be accessed so the data were not downloaded. The water level transducer in MW032 was not functioning in March 2022 and was replaced in June 2022. Data collected since June 2022 was downloaded.
Field parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for all groundwater samples. Field parameters were obtained before sampling, ex situ. The probe on the water quality meter was decontaminated prior to being placed in the water sample.
Sampling methodology	Groundwater samples were collected from the monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round. Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in 17 of the monitoring wells in preparation for the next sampling round. HydraSleeves™ were not installed in 21 monitoring wells as they are regularly used for monitoring on other programs.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for analysis for the PFAS suite using the standard LOR. ALS Environmental (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for groundwater analyses are certified by the National Association of Testing Authorities (NATA). Chain of custody (COC) forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.2 Surface Water Sampling Methodology

The methodology used for the October / November 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Field parameters	Temperature, EC, DO, ORP, pH and observations of water quality were recorded for all surface water samples.
Sample Collection Methodology	Samples were collected from immediately below the water surface to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory supplied container was lowered into the water with the cap immediately applied once the container was full.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard LOR. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for surface water analyses were certified by the NATA. COC forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.3 Sediment Sampling Methodology

The methodology used for the October/November 2022 sampling event was in accordance with the SAQP (AECOM, 2022a) and is summarised in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sample Collection Methodology	Samples representative of potentially deposited sediments were collected from within the water body where possible. Sediment samples were collected by hand using new laboratory supplied nitrile gloves and a new laboratory supplied container at each location.
Logging	Sediment characterisation details were recorded for each sample.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard LOR. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for sediment analyses were certified by the NATA. COC forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset includes the following:

- PFAS NEMP, V2.0 (HEPA, 2020);
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia,* September 2019;
- National Health and Medical Research Council (NHMRC), 2019. *Guidance on PFAS in Recreational Water*, August 2019 (NHMRC, 2019);
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2022a), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** below.

Table 7 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking water – groundwater	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). *All groundwater results will be compared to these criteria.*
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values presented are from the PFAS NEMP (HEPA, 2020), which are sourced from NHMRC (2019). *All surface water results will be compared to these criteria.*
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater (95% species protection values)	PFOS	0.13 µg/L	*The values are from the PFAS NEMP* (HEPA, 2020). *All surface water and groundwater results will be compared to these criteria.*
	PFOA	220 µg/L	
Freshwater (99% species protection values)	PFOS	0.00023 µg/L	
	PFOA	19 µg/L	

There are no current HEPA (2020) endorsed human health or ecological guideline values available for PFAS in sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2022a).

Data validation assessment is provided in **Appendix C**. Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are

representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (Defence, 2018) Annex L Guidance on Data Management (amended 2021) requirements.

3.6 Deviations from the SAQP

Table 8 lists the deviations from the SAQP (AECOM, 2022a) during this sampling event. The deviations are considered to be of low significance and have a minimal impact on the sampling event results.

Table 8 Deviations from the SAQP during Sampling Event for October/November 2022

SAQP	October/November 2022 Sampling Event	Impact on OMP Program
Collection of groundwater samples at 40 locations	• MW056S and MW056I could not be sampled as the wells could not be found due to the presence of heavy vegetation.	• The non-sampling of MW056S and MW056I reduced the spatial coverage of the groundwater monitoring network to the east of the Base.
Installation of Hydrasleeves™ at target depths in monitoring wells	• The Hydrasleeve™ installed in monitoring well MW023 was installed at 8.7 mbtoc, compared to the target depth of 11.0 mbtoc, as identified in the SAQP.	• As the Hydrasleeve™ was installed in the screened section of the well, there is not likely to be an impact on the quality of the data and OMP program.
Collection of surface water samples at 49 locations	Three surface water samples were not collected: • SW011 and SW076 could not be collected as they were present in construction zones. • SW050- not accessible due to site conditions. Additionally, SW028 was collected and transferred to the laboratory, however, subsequently, the sample bottles could not be found.	• The non-sampling of SW011 and SW076 means there are no data available to evaluate PFAS concentrations at these drain locations. The non-sampling of SW050, which is located along the Bremer River, and non-analysis of SW028 (located along the Warrill Creek) is of lower significance as there are data available from sampling locations further downstream.
Download of data from seven data loggers	• Dataloggers from MW056S and MW056I could not be retrieved as the wells could not be found due to the presence of heavy vegetation. Data from all other locations were downloaded. • During the sampling event in April 2022, the datalogger in MW032 was found to be not functioning. The datalogger was replaced in June 2022.	• Dataloggers at MW056S and MW056I will be downloaded during the next sampling event. The non-retrieval of the data during this event delays the evaluation of groundwater elevations. • Groundwater level data in MW032 were not available for the period April to June 2022. As groundwater level data were not available, this reduces the understanding of groundwater level changes in 2022 at this portion of the Base near the Warrill Creek.

SAQP	October/November 2022 Sampling Event	Impact on OMP Program
Collection of sediment samples from 49 locations	Three sediment samples were not collected: • SD011 and SD076 could not be collected as they were present in construction zones. • SD050- not accessible due to site conditions. Additionally, SD009 was collected and transferred to the laboratory, however, subsequently, the sample bottles could not be found.	• The non-sampling of these sediment samples means there are no data available to evaluate PFAS concentrations at these drain/creek locations. The non-sampling is of low significance as there are data available at sampling locations further downstream.
LOR for water samples	• Due to matrix interference during the analysis of the groundwater sample from MW044, the LOR were raised for sum of PFHxS and PFOS above the drinking water guideline value and PFOS above the ecological 95% freshwater species protection guideline value	• No impact to OMP program. Duplicate and triplicate samples were also collected from MW044. The triplicate sample, analysed at NMI was not affected by matrix interference and consequently the triplicate results have been used for assessment purposes in this report.
Collection of samples during a single sampling event	• Due to the wet conditions during October 2022, five groundwater samples (MW022, MW034, MW035, MW054S, MW054D) could not be collected and were collected approximately two weeks later in November 2022.	• The delay of two weeks in sampling five of the wells is considered to be a relatively short period and is unlikely to impact the OMP program.

4.0 Field Observations and Results

The October/November 2022 sampling event was completed between 18 October and 9 November 2022. The results are summarised in following sections.

4.1 Groundwater

4.1.1 Groundwater Observations and Field Measurements

Table 9 Groundwater Observations and Field Measurements

Item	Details
Access	All monitoring wells were accessible with the except of MW056S and MW056I which were not found due to heavy vegetation.
Monitoring Well Network	No issues were identified in 37 monitoring wells sampled. The gatic for MW042, located at the fire school, has been damaged due to ground movement.
Field Observations	Groundwater from one monitoring well had a sulfur odour (MW34). Groundwater from two monitoring wells had a hydrocarbon odour (MW041 and MW042). No other visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells. Field observations are presented in **Table T1** in **Appendix B**.
Depth to Groundwater	Depth to groundwater in the Alluvium was between 2.52 and 15.01 metres below top of casing (mbtoc). Depth to groundwater in the Tertiary Formation was between 5.52 and 16.08 mbtoc. Depth to groundwater in the Walloon Coal Measures was between 5.24 and 24.07 mbtoc. Groundwater elevation in the Alluvium was between 9.77 and 18.20 metres above Australian height datum (mAHD). Groundwater elevation in the Tertiary Formation was between 10.97 and 28.98 mAHD. Groundwater elevation in the Walloon Coal Measures was between 14.31 and 39.62 mAHD. Groundwater gauging data are presented in **Table T1** in **Appendix B**. Water level transducer results for five monitoring wells are presented in **Appendix G**.
Groundwater Flow Direction	Inferred groundwater contours and groundwater flow directions at the Base in October/November 2022 for the Alluvium/Tertiary Formation are shown on **Figure 4** in **Appendix A**. The inferred local groundwater flow direction is towards the northeast and east in the direction of the Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2022b). Inferred groundwater contours and groundwater flow directions at the Base in October/November 2022 for the Walloon Coal Measures are shown on **Figure 4** in **Appendix A**. The inferred local groundwater flow direction is towards the northeast and east in the direction of the Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2022b).

<tr><td>Estate Management Works or Training Activities</td><td>During the sampling event no notable estate works or training activities were observed in the vicinity of sampling locations or are known to have taken place in the six months prior to the sampling event, which may have had a material impact upon the sampling event and analytical data.</td></tr>
</table>

4.1.2 Groundwater Analytical Results

The groundwater analytical results for PFAS from this sampling event are presented in **Table T2** in **Appendix B**. Concentrations of sum of PFHxS and PFOS in 23 of the 38 groundwater samples exceeded the drinking water guideline value with six samples exceeding the PFOA guideline.

PFAS were detected above the LOR in 27 of the 38 groundwater samples collected. A total of 25 samples were detected equal to or above the LOR and exceeded the ecological guideline for PFOS for 99% protection of ecosystems with 16 of these samples also exceeding the 95% protection guideline value. One groundwater sample (MW046) exceeded the PFOA ecological guideline for 99% protection of freshwater species, but this sample did not exceed the 95% protection guideline.

There were no first-time detections or new exceedances of the guidelines compared to the historical dataset. There were six new maximum sum of PFHxS and PFOS concentrations recorded in samples from MW025 (2.44 µg/L), MW029 (11.8 µg/L), MW030 (11.6 µg/L), MW047 (16.7 µg/L), MW054S (0.38 µg/L) and MW057S (2.57 µg/L). The concentration detected in MW057S exceeded the recreational water use guideline value for the first-time. There were four new maximum PFOA

concentrations recorded in the samples from MW025 (0.17 µg/L), MW030 (1.19 µg/L), MW047 (0.52 µg/L) and MW057S (0.11 µg/L).

4.2 Surface Water

4.2.1 Surface Water Observations and Field Measurements

</table>

4.2.2 Surface Water Analytical Results

The analytical results for PFAS in surface water from this sampling event are presented in **Table T4** in **Appendix B**. There were no new exceedances of the adopted human health or ecological guidelines compared to the historical dataset. There was one first-time detection of PFOA (0.02 µg/L) in the

sample from SW026, which marginally exceeded the LOR (0.01 µg/L). There were no first-time detections of sum of PFHxS+PFOS in October / November 2022. First-time detections from the historical dataset are recorded in **Table 11** below. The location of SW026 is shown on **Figure 6** in **Appendix A**.

Table 11 First-time Detections or New Exceedances of Sum of PFHxS+PFOS or PFOA in Surface Water

First-time detection / exceedance	Surface water Sampling location	Sum of PFHxS+PFOS concentration (µg/L)		PFOA concentration (µg/L)	
		October / November 2022	Historical maximum	October / November 2022	Historical maximum
First-time detections or new exceedances of PFHxS+PFOS or PFOA in surface water	SW026	0.58	0.23	0.02	<0.01

Note: Yellow shading indicates a sample with a new exceedance above human health recreational water guideline values (refer to **Table 7**), blue indicates a first-time detection.

Concentrations of sum of PFHxS and PFOS in seven of the 45 surface water samples exceeded the recreational water guideline value (SW021, SW030, SW033, SW037, SW056, SW059, SW067) with none of the samples exceeding the PFOA guideline. A total of 30 samples exceeded the ecological guideline for PFOS for 99% protection of ecosystems with 24 of these samples also exceeding the 95% protection guideline value. None of the samples exceeded the PFOA ecological guidelines for either 95% or 99% protection of freshwater species.

Other than the new detection and new maximum concentration of PFOA in SW026 as described above, a new maximum sum of PFHxS and PFOS concentration was recorded in the sample from SW099 (0.12 µg/L).

4.3 Sediment

4.3.1 Sediment Observations and Field Measurements

Table 12 Sediment Observations

Item	Details
Access	All sediment sample locations were accessible, with the exception of SD011, SD050 and SD076.
Field Observations	Sediment logging data are presented in **Table T5** in **Appendix B**. No visible or olfactory indications of contamination were observed during sampling at the sediment sampling locations. Thirteen of the samples had an organic odour.
Weather Conditions	Weather conditions during sediment sampling were hot (with maximum daily temperatures between 23.1 and 35.2°C) with rain during October/November. A total of 93.2 mm of rainfall was recorded during the sampling period from 18 October – 9 November 2022 (Bureau of Meteorology (BOM) station 040004 – 'Amberley AMO).
Estate Management Works or Training Activities	During the sampling event no notable estate works or training activities were observed in the vicinity of sampling locations or are known to have taken place in the six months prior to the sampling event, which may have had a material impact upon the sampling event and analytical data.

4.3.2 Sediment Analytical Results

The analytical results for PFAS in sediment from this sampling event are presented in **Table T6** in **Appendix B**. There was one first-time detection from the historical dataset. This was in the sample from SD038 with PFOA reported at a concentration of 0.0005 mg/kg. New maximum sum of PFHxS and PFOS concentrations were recorded at SD020 (0.0133 mg/kg), SD028 (0.468 mg/kg), SD036 (0.01 mg/kg), SD038 (0.0229 mg/kg), SD059 (1.1 mg/kg), SD064 (0.313 mg/kg) , SD090 (0.0015 mg/kg). New maximum concentrations of PFOA were recorded at SD003 (0.0026 mg/kg), SD030 (0.0035 mg/kg), SD038 (0.0005 mg/kg) SD051 (0.0003 mg/kg), SD056 (0.0246 mg/kg)[2], SD059 (0.0156 mg/kg).

[2] This was in the duplicate sample, 0861_QC190_221021. The PFOA concentration in the primary sample, 0861_SD056_221021 was 0.191 mg/kg.

5.0 Summary and Next Sampling Event

5.1 Summary of Monitoring Event

A groundwater, surface water and sediment monitoring event was completed within the RAAF Base Amberley Management Area between 18 October and 9 November 2022. The program included sampling of groundwater from 40 monitoring wells and 49 co-located surface water and sediment sampling locations. A total of 38 monitoring wells, 45 of the surface water locations and 45 sediment locations were sampled and analysed.

Table 13 summarises the findings of the October / November 2022 sampling event and the recommended actions.

Table 13 Summary of Sampling Event

Item	Comment	Recommended Actions
Access to sampling locations	All groundwater sampling locations were accessible with the exception of MW056S and MW056I, due to the presence of heavy vegetation. All surface water and sediment samples were collected with the exception of SW/SD011, SW/SD050 and SW/SD076 as these locations were not accessible.	The off-Base location of MW056S/I is heavily vegetated and will need to mowed by the Council to allow access. The locations SW/SD011, SW/SD050 and SW/SD076 should be reinspected during the next sampling event in April 2023. Sampling of on-Base drains should continue to be timed to occur after a rainfall event.
Groundwater level loggers	Groundwater dataloggers could not be retrieved from MW056S and MW056I due to the presence of heavy vegetation.	The datalogger data from MW056S/I will be retrieved in the next sampling event.
Monitoring well network condition	No issues were identified in 37 of the 38 monitoring wells sampled. The gatic for MW042, located at the fire school, has been damaged due to ground movement and requires repairs.	The gatic cover for MW042 requires repair.
Analytical Results	Sum of PFHxS and PFOS or PFOA concentrations in 32 out of 38 groundwater samples were consistent with historical results. Six groundwater sampling locations reported new maximum concentrations or wither sum of PFHxS and PFOS or PFOA. Sum of PFHxS and PFOS or PFOA concentrations in 43 of 45 surface water samples collected were consistent with historical results. Two surface water sampling locations reported new maximum concentrations. Sum of PFHxS and PFOS or PFOA concentrations were consistent with historical results in 34 of the 45 sediment samples. Eleven sediment samples reported new	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2022 which will identify the sampling program after the October 2022 sampling event.

Item	Comment	Recommended Actions
	maximum concentrations for sum of PFHxS and PFOS or PFOA.	
First-time detections of Sum of PFHxS and PFOS or PFOA	No first-time detections of sum of PFHxS and PFOS or PFOA above the laboratory LOR were recorded in any of the groundwater, surface water (with one exception) or sediment samples (with one exception) collected. The exceptions were the surface water sample from SW026 and the sediment sample from SD038, which recorded first-time detections of PFOA. However, PFOS and PFHxS have been consistently detected at these monitoring locations.	Ongoing monitoring in accordance with the OMP.
New exceedance of NEMP guideline values	There were no new exceedances of the NEMP (HEPA, 2020) drinking water guideline values in groundwater. There was one new exceedance of the recreational water use guideline value for sum of PFHxS and PFOS in the sample from MW057S. There were no new exceedances of the ecological guideline value in groundwater or surface water samples.	Ongoing monitoring in accordance with the OMP.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for April 2023.

5.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled for March 2023.

Notes
All Hydrasleeves™ were installed a minimum of 24 hours prior to sampling.
m - metres
mbtoc - metres below top of casing
mAHD - metres above Australian Height Datum
TOC - Top of Casing
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius

LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
NHMRC is National Health Medical Research Council
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values

* Duplicate sample from MW022 reported higher slightly higher results for PFHxS and PFPeS compared to the primary sample. The duplicate results are presented in this table.
** The duplicate sample from MW043 reported slightly higher resutls for PFBS, PFHxS and PFOS compared to the primary sample. The duplicate results are presented in this table.
***Due to matrix interference in the primary and duplicate samples from MW044, the LORs were raised. The triplicate sample, analysed by NMI was not affected by matrix interference. The triplicate results are presented in this table.

Notes
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius

Notes:
LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
NHMRC is National Health Medical Research Council
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values

Property ID	Location ID	Sample Date	Sample Description	Odour	Notes on River Conditions
0861	SD002	21/10/2022	SILT, brown, low plasticity, saturated.	Organic odour	Manmade drainage channel around 10m width, running west to east. Water is shallow, ~0.1m depth, pooled, clear with bright green algae and aquatic plants. Long grass in channel. Sediment slug to the east of the culvert.
0861	SD003	21/10/2022	Silty CLAY, brown, medium plasticity, firm, saturated.	Organic odour	Wide and deep drainage channel, draining north west from the airstrip. Around 40m width and 10m depth. Steep eroded bank to the south west. Heavily vegetated channel with grass, reeds and trees. Reenforced north east bank with large angular boulders.
0861	SD004	18/10/2022	Silty CLAY, brown, low plasticity, soft, wet with a trace of fine sand.	No odour	Abundant woody debris in river channel. Eroded southern bank. Brown, flowing water, around 0.5m depth. Flowing west to east. Evidence of flooding (stacked debris).
0861	SD005	18/10/2022	Silty CLAY, brown, low plasticity, soft, wet with a trace of sand	Organic odour	Brown, flowing water (west to east). Appears to be around 0.5m maximum depth. Clear, brown water with fish present. Established riparian vegetation on north bank. Steep eroded southern bank with no riparian vegetation, followed by grassed floodplain to the south. Woody debris within river channel.
0861	SD008	18/10/2022	Gravelly SILT, low plasticity, brown, soft, saturated, fine to medium subangular, well graded.	No odour	Still, pooled water with gently sloping grassed banks. Reeds and grass within channel. Flows west to east. Maximum 1m depth. Maximum 5m width.
0861	SD009	18/10/2022	Gravelly SILT, low plasticity, brown, soft, saturated, fine to medium subangular.	No odour	Flowing, west to east, slightly cloudy, brown water. Around 1m depth, and around 10m width. Vegetated sediment island within creek with established trees and grasses. Woody debris within channel. Fish present. Southern bank issteep and eroded with no vegetation. North bank is gradually sloping.
0861	SD011	Not sampled			
0861	SD015	18/10/2022	Silty CLAY, brown, low plasticity, very soft, saturated, trace of sand.	Organic odour	Gently flowing west to east. Slightly cloudy water. ~0.3m depth. Heavily vegetated on north bank with established trees and native grasses. Gently sloping north bank. South bank is steep with visible erosion and less vegetation.
0861	SD016	18/10/2022	Sandy SILT, brown, low plasticity, brown, soft, saturated, fine to coarse sand.	No odour	S+F10:H10till, clear water, brown in colour. Established riparian vegetation on north bank. Woody debris within channel. Fish observed in creek. Rubbish filled embankment ~20m north consists of concrete slabs, construction material, steel debris.
0861	SD018	18/10/2022	Silty CLAY, low plasticity, brown, soft, saturated, thick roots.	Organic odour	Clear, gently flowing water W to E. Approximately 0.3m depth. Wood debris in river channel. Large angular cobbles in channel (~30 cm). Well vegetated on both banks. Creek bed contains native grass vegetation. Lots of rubbish observed, including bottles, concrete, metal, and asbestos. Construction rubble in creek channel.
0861	SD020	18/10/2022	Silty CLAY, low plasticity, brown, firm, saturated.	No odour	Clear, still water. Heavily vegetated riparian banks to the north and south. Water gently flowing west to east. Water depth maximum 0.3m. Evidence of flooding (debris in trees).
0861	SD021	21/10/2022	Silty GRAVEL, brown, loose, fine to medium gravel, saturated.	No odour	Shallow, pooled, still water around 0.2m maximum depth. Thick grass and vegetation surrounding sample location.
0861	SD025	20/10/2022	Clayey SILT, low plasticity, brown, soft, saturated with coarse subangular gravel.	No odour	Still pooled water. Flow direction south to north evidenced by debris build up. Black water with small aquatic surface water plants. Depth >1m, width ~20m. Sparcely vegetated banks. Gradual sloping banks (<10°), with steep drop at waters edge.
0861	SD026	20/10/2022	Silty CLAY, brown, medium plasticity, firm, saturated.	No odour	Still, pooled, deep water. Very narrow channel, around 2m width. Heavily vegetated banks with native grasses and well established trees. Steep banks. Woody debris within and across the channel. Flow direction south to north.
0861	SD027	21/10/2022	Clayey SILT, brown, low plasticity, soft, saturated.	Organic odour	Heavily modified creek bed. Vegetated with reeds and trees. Flow direction east to west. Manmade cobble embankment to the south. Grassed, eroding bank to the north.
0861	SD028	18/10/2022	Clayey SILT, low plasticity, brown, soft, saturated, highly organic.	Organic odour	Pooled water channel with aquatic plants on the surface. Fish and tadpoles present. Long grass surrounding the channel (~1m high). No riparian vegetation. Relatively flat catchment (<5°) surrounding the channel. Water is black. Unable to see the bottom. Channel is ~ 2m width, and around 0.5m maximum depth. Appears to flow west to east.
0861	SD030	21/10/2022	Silty CLAY, brown, medium plasticity, saturated.	Organic odour	Drain beside road. Flat land surrounding. Manmade banks. No riparian vegetation. Grassed mown banks.
0861	SD033	25/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Gently flowing east to west. Man made channel capturing runoff from training area and release from new water treatment tanks. Ponds immediatley adjacent to the south. Currently empty. Channel bed contains large angular cobbles and reenforcement wire.
0861	SD034	18/10/2022	SILT, low plasticity, brown, soft, saturated with organics.	Organic odour	Still brown water ~0.3m depth. Heavily vegetated riparian zones on both banks. Native grasses within channel. Rubbish observed in northern bank, including porcelain, glass, and rubber. Narrow drainage channel entering creek from the north to south at sample location.
0861	SD036	19/10/2022	Silty CLAY, brown, low plasticity, saturated, soft to firm.	No odour	Pooled deep water in channel. Unable to see the bottom. Large established gums and trees in channel. Aquatic plants covering entire surface. Western bank vegetated with grass and trees. Eastern bank is gently sloping, vegetated with native grasses. Channel is within a regeneration area.
0861	SD037	21/10/2022	SILT, brown, low plasticity, saturated.	Organic odour	Minimal water <0.1m depth. Still, pooled, and stagnant water. Very shallow drainage channel with mown grassed banks. Tall reeds around 2m high within channel.
0861	SD038	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Still poolled water >1m depth, ~3m width. Appears to flow west to east (based on the gradient of the land). Large fish observed. Man made embankments with large angular cobble bank reenforcement. Water is clear with a brown/green colour. Aquatic plants on surface. Reeds on banks. Surrounded by open, mown, grassed area.
0861	SD039	20/10/2022	Silty CLAY, brown, medium plasticity, firm, saturated, trace of coarse subangular gravel.	No odour	Still pooled water beneath bridge. <0.2m depth. Large subangular boulders and cobbles within channel. Creek bed is vegetated with reeds and grasses and well established trees. Flow direction is S to N evidenced by woody debris within the creek.
0861	SD040	20/10/2022	Silty SAND, brown, fine to medium, loose, saturated.	No odour	Large, deep, still dam, with brown coloured water. Around 20m width. Depth >1m. Heavily vegetated banks on both sides. Well established trees and native grasses on both gently sloping banks. Vegetated bank around 50m width on north side. Drainage channel entering the dam from the NW. Sample taken around 2m upstream of drainage channel.
0861	SD041	20/10/2022	Clayey SILT, low plasticity, brown, soft, saturated.	No odour	Clear, black, pooled, still water. Maximum 0.3m depth. Channel is heavily vegetated with tall reeds. Large angular boulders within channel.
0861	SD043	20/10/2022	Clayey SILT, brown, low plasticity, soft, saturated.	No odour	Clear, flowing creek. Flowing south to north. Erosion channels on eastern bank beneath the bridge. Black cracking clays. Banks are well vegetated. Channel is around 5m width.
0861	SD045	20/10/2022	Silty SAND, brown, fine to medium, loose, saturated, trace of fine sand.	No odour	Still, clear, brown water, flowing west to east. Small aquatic plants on surface. Well vegetated banks on both sides with native grasses and trees.Gently sloping banks with a steep drop off next to sampling point. Woody debris along banks.
0861	SD047	19/10/2022	Silty CLAY, low plasticity, brown, soft, saturated.	No odour	Deep pooled water. Very steep bank on the western side. Channel around 40m width. Vegetated island with well established gums and trees within the river channel.
0861	SD048	20/20/2022	Clayey SILT, low plasticity, brown, soft, saturated.	No odour	Drainage leads from hangar to the north ~40m. Land slopes to the south west. Mowed grassed area.
0861	SD049	19/10/2022	Silty CLAY, medium plasticity, grey-brown, soft, saturated.	No odour	Large dam at the bottom of a grassy slope. Around 100m diameter. Deep, still, brown water. Aquatic reeds surrounding the banks. Ducks and fish present. Slopes gently from the east to the west.
0861	SD050	Not sampled			
0861	SD051	20/10/2022	Silty CLAY, brown, medium plasticity, firm, saturated.	No odour	Deep pooled, still water. Flow direction N to S evidenced by flood debris in trees. Very steep embankment. Channel around 5m width. Green scum covering entire surface. Woody debris within channel. Overland flow across embankments evident with rubbish (corrugated iron) running W to E. Heavily vegetated banks with native grasses, reeds, and trees.
0861	SD052	19/10/2022	Silty CLAY, low plasticity, brown, soft, saturated, trace of fine sand.	No odour	Still, pooled, deep water. Narrow channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are heavily vegetated. Flow direction is W to E evidenced by flood debris in trees. Very steep banks.
0861	SD053	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Manmade drainage channel surrounding the runway. Water flowing south to north. Very shallow. Concrete base with 4 drains entering channel. Green
0861	SD056	21/10/2022	SILT, brown, low plasticity, saturated.	Organic odour	Flat surrounding land. Very gently sloping banks. Channel is around 2m maximum width. Depth around 0.2m max. Grassed mown banks. Reeds and aquatic plants within channel. Still, pooled water.
0861	SD059	21/10/2022	Clayey silt, low plasticity, brown, soft, saturated.	Organic odour	Manmade channel. Grassed and mown. Flat surrounding land. Large angular cobbles in drain.
0861	SD064	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Very shallow, narrow drainage channel bordering the runway. Mown grassed area surrounding sample location.
0861	SD067	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Small drainage channel. Concrete culvert contains dark green water. Culvert is covered with a grill. Very shallow channel. Mown grassed banks. Dry during visit.
0861	SD076	Not sampled			
0861	SD079	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Very tall reeds in channel. Green and brown algae in channel. No flow. Shallow. Around 0.2m depth. Very gently sloping mown grassed banks.
0861	SD080	24/10/2022	Silty CLAY, brown, low plasticity, soft, saturated.	No odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Sediment build up on the southern side of the culvert. Very gently sloping mown grassed banks.
0861	SD088	19/10/2022	Silty SAND, loose, brown, fine to medium, saturated.	No odour	Deep, wide channel. Entire surface is covered with small aquatic plants. Gently sloping vegetated banks. Woody debris within channel. Flow direction is west to east.
0861	SD089	19/10/2022	Silty CLAY, low plasticity, brown, soft, saturated, trace of fine sand.	No odour	Still, pooled, shallow water. Entire surface is covered with small aquatic plants. Woody debris across channel. Fallen trees across the banks. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD090	21/10/2022	SILT, low plasticity, brown, soft, saturated with organics.	Slightly organic	Still, pooled, deep water. Channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are heavily vegetated. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD091	21/10/2022	Silty CLAY, brown, medium plasticity, soft, saturated.	No odour	Still, pooled, clear water. Small aquatic plants on surface. Woody debris within creek channel. Fallen trees across channel. Channel around 3m width. Water around 0.3m depth. Heavily vegetated banks. Banks are fenced off for regeneration. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
0861	SD094	19/10/2022	Silty CLAY, medium plasticity, brown, firm, dry.	No odour	Shallow, pooled water in creek channel. Not flowing, clear, brown. Large woody debris within channel. Vegetated banks. Steep easterly bank, gently sloping on the west. Western bank is a revegetation area. Flow direction is north to south, evidenced by flood debris within the channel. Drainage channel entering the creek from the northwest to southeast. Heavily eroded.
0861	SD098	20/10/2022	Silty CLAY, brown, medium plasticity, soft, saturated.	No odour	Still pooled water beneath bridge. ~0.5m depth. Clear, with a brown colour. Water flow north to south evidenced by debris build up within creek. Film of white/green substance on water surface. Geofab on embankments. Vegetated banks on both sides with native grass and trees.
0861	SD099	20/10/2022	Sandy CLAY, brown, medium plasticity, brown, soft, saturated.	No odour	Deep, wide channel. Brown, turbid water. Gently flowing south to north. Woody debris along banks. Grassed bank to the west. Vegetated with well established trees to the east.
0861	SD100	20/10/2022	Clayey SILT, brown, low plasticity, soft, saturated.	No odour	Deep, narrow channel, gently flowing east to west. Clear, green/brown colour. Flood debris in trees and on banks. Very steep north bank. Long grass and vegetation on south bank.

DATA VALIDATION REPORT

Project No.:	60612563	**Validation by:** SD	**Date:** 22/11/2022
Client:	Department of Defence		
Site:	Royal Australian Airforce Base, Amberley		
Matrix type:	Groundwater, surface water, sediment	**Data verified by:** JP	**Date:** 24/11/2022
No. of primary samples:	38 groundwater, 45 surface water, 45 sediment		
Laboratory:	ALS (Brisbane), NMI (Sydney)	**Project Manager:** JP	
Lab reference:	EB2231197, EB2231202, EB2231825, EB2231850, EB2233627, EB2233631, AECO06_221025, AECO06_221102, AECO06_221115		

Key Issues:	No key QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.

Field QA/QC

Sampling personnel	Sampling was conducted by AECOM environmental scientists between 18 October and 9 November 2022.
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report and as presented in the SAQP. Field parameters were measured using a water quality meter prior to sample collection. The probe on the water quality meter was decontaminated prior to use. The SAQP does not specify whether field parameters should be collected before or after sample collection. The method used is not expected to impact sample collection.
Chain of Custody	COC documents completed as per AECOM procedures. Two samples (SD009 and SW028) listed on the COC for EB2231197 were booked in by the analytical laboratory (ALS) sample receipt, however, they were not included on the sample receipt notification. The laboratory has advised that these samples were not received so it appears these samples were lost during the transportation process.
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per day of sampling where appropriate (eight in total) during the monitoring between 18 October to 9 November 2022. Rinsates were collected from the decontaminated interface probe. Concentrations reported below the LOR for all analytes tested. See Table C1.
Field Blanks	Field blank samples were collected at a frequency of one per day of sampling (eight in total between 18 October to 9 November 2022) by filling sample containers with laboratory supplied deionised water in the field. All field blanks reported concentrations below the LOR for the analytes tested. See Table C1.
Trip Blanks	Trip blank samples were present during the transport of samples during the sampling between 18 October to 9 November 2022 for the primary laboratory samples. Four soil trip blanks all reported concentrations below the LOR, see Table C2. The number of blanks is lower than the target frequency in the SAQP (one per batch). There were six batches in total. Additional trip blank were supplied to the laboratory, unfortunately they could not be analysed for PFAS as the incorrect type of blanks had been supplied by the laboratory. This minor non-compliance is not expected to impact data quality as PFAS are not volatile compounds and are unlikely to volatise during sample transport.

Frequency of field QC	Field duplicate (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected. There were five duplicates/triplicate sets each for groundwater, surface water and sediment (see Tables C3, C4 and C5). The frequency of field QC achieves the expected frequency for each media type. The target frequency of one in ten primary samples was achieved for all matrices.
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. All samples were received at the laboratory in appropriate sample containers with no sample container non-compliances noted.
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	The laboratory reported a sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except: • EB2231197 - laboratory duplicates (water) for PFAS (7.55%) which is below the expected rate of 10.00% (53 samples in batch). • EB2231202 - matrix spikes and laboratory duplicates (water) for PFAS (both 0.00%) which is below the expected rate of 5.0% (for matrix spikes) and 10.00% (duplicates) (20 samples in batch). • EB2231850 - laboratory duplicates (water) for PFAS (5.88%) which is below the expected rate of 10.00% (17 samples in batch).Matrix spikes (water) for PFAS (0.00%) which is below the expected rate of 5.0% (1 sample in batch). The reason for insufficient matrix spikes and laboratory duplicates for these batches is due to the way the laboratory assigns the duplicates and matrix spikes and the availability of additional bottles. The laboratory LIMS assigns laboratory QC to samples in the analytical run; however, the runs may not allocate samples to allow for frequency compliance. However, as all other laboratory QC results met control limits this is not expected to impact data quality.
Method Blank	No method blank non-compliances were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples with the exception of the following: • EB2231197 – RPDs exceeded the LOR based limits (0-20%) in one sediment sample, 0861_SD059_221021, for PFHxS (20.1%), PFHpS (37.3%), PFOS (29.7%) and PFDS (52.3%). PFOS exceeded the LOR based limits in an anonymous sample (EM2220638-015) for PFOS (29.7%). • EB2231825 – RPDs exceeded the LOR based limits in a soil sample, 0861_QC194_251025 for PFHxS (75.2%), PFOS (52.8%), PFDS (118%), PFHxA (77%), PFOA (82.2%) and FOSA (100%). The laboratory reported that the samples 0861_SD059_221021, EM2220638-015 and 0861_QC194_221025 showed poor duplicate results due to sample heterogeneity, which was confirmed by visual inspection. These results are not expected to impact data quality.
Laboratory control spike recovery	All Laboratory Control Spikes (LCS) recoveries (where reported) were within control limits, except: • EB2231197 (soil) and EB2231850 (water): LCS recovery for EtFOSA and EtFOSAA were greater than the upper control limit.

	LCS are known, interference free matrix spiked with target analytes or certified reference material. The purpose of this quality control type is to monitor precision and accuracy independent of sample matrix and to indicate if the analytical procedure is in control and evaluates the laboratory capability to report unbiased results. Although some non-conformances have been detected in a small number QC samples, the non-conformances do not include the key analytes, PFHxS and PFOS so the understanding of the concentrations of these compounds is not impacted.
Matrix spike recovery	All matrix spike (MS) recoveries (where reported) were within control limits, except: • EB2231197 (water): MS recovery for PFOS in 0861_SW005_221018 was not determined. This indicates that matrix interference may have occurred in the sample from SW005. Review of the results for SW005 did not indicate anomalies. This non-conformance is not expected to impact data quality.
Surrogate spike recovery	Surrogate spike recoveries were within control limits for all samples.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels except for PFOS for NEMP (HEPA, 2020) ecological guideline values for the 99% protection of freshwater species. The potential exists for concentrations of PFOS to be above the adopted guideline, but below the laboratory LOR. This should be taken into consideration when interpreting and using this data quantitatively where results are reported below LOR. LORs for the primary and duplicate samples from MW044 were raised due to matrix interference. The results for the triplicate sample, analysed by NMI, were used in replacement.
Field QA/QC RPDs	RPDs for groundwater, surface water and sediment samples are reported in Tables C3, C4 and C5 respectively. Field duplicate and triplicate RPDs were reported within control limits for all groundwater, surface water and sediment samples except the following (the sample with the higher concentration is in bold). • 0861_SD049_221019 and **0861_QC286_221018** for PFOS (146%), • **0861_SD041_221020** and 0861_QC188_221020 for PFPeS (92%) and PFHxS (84%), • 0861_SD041_221020 and **0861_QC188_221020** for PFOS (65%), • 0861_SD056_221021 and **0861_QC288_221021** for PFOS (44%), • 0861_SD033_221025 and **0861_QC194_221025** for PFOS (44%), • 0861_MW022_221109 and **0861_QC298_221109** for PFPeS (33%) and PFHxA (56%) • 0861_SW005_221018 and **0861_QC282_220328** for PFHxS (49%) and PFOS (62%) • 0861_SW041_221020 and **0861_QC289_221020** for PFHxS (40%), PFOS (40%) and PFHxA (58%) • 0861_SW056_221021 and **0861_QC291_221021** for PFBS (46%), PFPeS (62%), PFHxS (51%), PFOS (49%), PFHxA (65%), PFOA (58%). The RPD non-conformances are likely to be due to lack of mixing of samples, different extraction techniques used by the primary and secondary laboratories and heterogeneity in the solid samples. Where the QC samples highlighted above reported a higher concentration than the primary sample, the higher QC sample concentrations do not constitute a first-time detection of PFOA or PFHxS+PFOS or a new maximum of the same concentrations except for:

	• 0861_SD056_221021 and **0861_QC190_221021** where a new maximum of PFOA (0.0246 µg/L) was reported in both samples, with the duplicate sample reporting the higher concentration. Therefore, the elevated RPDs are not considered to affect data interpretation for use in this report. The higher concentration has however conservatively been adopted in the report tables. All remaining samples reported within the control limits.
Other	
Other observations	No other key observations were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory
NC is not calculable

Receipt Detail	: Medium esky	No. of samples received / analysed	: 88 / 83

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***25/10/2022: SRN has been resent to acknowledge request for updated Project ID, Sample IDs for Samples 005,008,012,013,080,081, and assign analysis PFAS (EP231X) to Samples 079-081.***
- ***SRN Reissued 24/11/2022: To acknowledge request for Updated sample ID's for ALS Samples 008, and 086.***
- ***24/10/2022: SRN has been resent to acknowledge the changes to this work order to correctly reflect samples received. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- **26/10/22: SRN has been resent to acknowledge that PFAS has been added to Samples 82-88 as requested. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- **Please be advised that for sample 0861_QC528_221019, the requested PFAS analysis was not assigned as no appropriate container was submitted for analysis. For further information, please contact client services at ALSEnviro.Brisbane@alsglobal.com**
- **Various extra samples were received labelled as ALS #78<->88. 079-081 have had PFAS assigned, the remainder have been placed on hold. If testing is required on these samples, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com**
- ***26/10/2022: SRN has been resent to acknowledge consolidation of comments referring to changes to sample IDs and analysis. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Variuos samples have been forwarded to Eurofins as requested.**

- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

CERTIFICATE OF ANALYSIS

Work Order	: **EB2231197**	Page	: 1 of 37
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	[redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: +[redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 21-Oct-2022 17:39
Order number	: 60612563 3.1	Date Analysis Commenced	: 24-Oct-2022
C-O-C number	: ----	Issue Date	: 24-Nov-2022 10:42
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 88		
No. of samples analysed	: 83		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
	2IC Organic Chemist	Brisbane Inorganics, Stafford, QLD
	2IC Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample "0861_SD059_221021" shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (24/11/2022): This report has been amended as a result of a request to change sample identification numbers (IDs) received from [redacted] on 23/11/2022, for samples EB2231197 008 and 086. All analysis results are as per the previous report.
- EP231X PFAS: Sample "0861_SD028_221018" required dilution prior to analysis due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: Particular samples required dilution prior to analysis due to the presence of sample matrix interference. LOR values have been adjusted accordingly. Surrogate recoveries not determined. Matrix Spike recovery not determined.
- EP231X PFAS: The LOR of particular analytes have been raised due to the presence of sample matrix interference.
- EP231X PFAS: Sample "EM2220638-015" shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EP231X PFAS (water): Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to matrix interference (sediment). LOR values have been adjusted accordingly.
- EP231X PFAS: High laboratory control standard recoveries have been deemed acceptable as associated analyte results are less than the limit of reporting.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 21-Oct-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 24-Oct-2022
C-O-C number	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 88		
No. of samples analysed	: 83		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD
	2IC Organic Chemist	Brisbane Inorganics, Stafford, QLD
	2IC Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2231197**	Page	: 1 of 15
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 21-Oct-2022
Site	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]	No. of samples received	: 88
Order number	: 60612563 3.1	No. of samples analysed	: 83

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	7	48	**14.58**	**10.00**	✓	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 25/10/2022: To acknowledge request for updated Project ID***
- ***SRN Reissued 24/11/2022: To acknowledge requeest for updated Sample ID on Sample 086.***
- **For sample point 0861_QC532_221021, the requested analysis has not been assigned as the container submitted was not appropriate foer the requested PFAS analysis. For further information, please contact client services at ALSEnviro.Brisbane@alsglobal.com**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (24/11/2022): This report has been amended as a result of a request to change sample identification numbers (IDs) received from [redacted] on 23/11/22, for samples EB2231202 086. All analysis results are as per the previous report.
- EP231X PFAS: The LOR values of particular analytes for particular samples have been raised due to matrix interferences.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

ALS Environmental

QUALITY CONTROL REPORT

Work Order	: **EB2231202**	Page	: 1 of 8
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: [redacted]	Telephone	: +[redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 21-Oct-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 24-Oct-2022
C-O-C number	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 18		
No. of samples analysed	: 17		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2231202**	Page	: 1 of 6
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 21-Oct-2022
Site	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]	No. of samples received	: 18
Order number	: 60612563 3.1	No. of samples analysed	: 17

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count QC	Count Regular	Rate (%) Actual	Rate (%) Expected	Quality Control Specification
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	20	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	20	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 31/10/2022: To acknowledge request for updated sample IDs on ALS samples 062-065.***
- ***SRN Reissued 31/10/2022: To update formating of sample ID's 062-065.***
- ***SRN Reissued 24/11/2022: To acknowledge request for updated Sample ID's 025-043.***
- **Please be advised that samples QC533, QCQC534, QC535, QC536 were not received at the laboratory (denoted SNR on the scanned COC).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Extra samples were received labelled TRIP BLANK samples #62-65 and have been placed on hold. If testing is required on this sample, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Samples QC292, QC293,QC294,QC295,QC296, QC297 have been forwarded to NMI , as requested. Please note that this will incur a freight forwarding fee.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: Sample '0861_QC194_251025' shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (24/11/2022): This report has been amended as a result of a request to change sample identification numbers (IDs) received from [redacted] on 23/11/22, for samples EB2231825 025-043. All analysis results are as per the previous report.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to matrix interference (High Sediment) LOR values have been adjusted accordingly.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 27-Oct-2022
Order number	: 60612563 3.1	Date Analysis Commenced	: 30-Oct-2022
C-O-C number	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 61		
No. of samples analysed	: 57		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2231825**	Page	: 1 of 10
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: +[redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 27-Oct-2022
Site	: ----	Issue Date	: 24-Nov-2022
Sampler	: [redacted]	No. of samples received	: 61
Order number	: 60612563 3.1	No. of samples analysed	: 57

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs

EP231A: Perfluoroalkyl Sulfonic Acids	EB2231825--035	0861_QC194_221025	**Perfluorooctane sulfonic acid (PFOS)**	1763-23-1	52.8 %	0% - 20%	**RPD exceeds LOR based limits**
EP231A: Perfluoroalkyl Sulfonic Acids	EB2231825--035	0861_QC194_221025	**Perfluorodecane sulfonic acid (PFDS)**	335-77-3	118 %	0% - 20%	**RPD exceeds LOR based limits**
EP231B: Perfluoroalkyl Carboxylic Acids	EB2231825--035	0861_QC194_221025	**Perfluorohexanoic acid (PFHxA)**	307-24-4	77.0 %	0% - 20%	**RPD exceeds LOR based limits**
EP231B: Perfluoroalkyl Carboxylic Acids	EB2231825--035	0861_QC194_221025	**Perfluorooctanoic acid (PFOA)**	335-67-1	82.2 %	0% - 50%	**RPD exceeds LOR based limits**
EP231C: Perfluoroalkyl Sulfonamides	EB2231825--035	0861_QC194_221025	**Perfluorooctane sulfonamide (FOSA)**	754-91-6	100 %	0% - 50%	**RPD exceeds LOR based limits**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	2	19	**10.53**	**10.00**	✓	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Dates

Date Samples Received	: 27-Oct-2022 09:35	Issue Date	: 31-Oct-2022
Client Requested Due Date	: 04-Nov-2022	Scheduled Reporting Date	: **04-Nov-2022**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 2	Temperature	: 5.5°C, 3.8°C - Ice present
Receipt Detail	: MEDIUM ESKY	No. of samples received / analysed	: 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 31/10/2022: To acknowledge request for updated Sample ID's.***
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: High laboratory control standard recoveries have been deemed acceptable as associated sample analyte results are less than the limit of reporting.
- EP231X PFAS: Whole bottle extraction was not possible for sample '0861_MW057S_221026' (EB2231850-001). Sample required dilution prior to extraction due to matrix interference (sediment). LOR values have been adjusted accordingly.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.
- EP231X-INJ: The direct injection LCMSMS method may be used where the sample matrix is not suitable for Solid Phase Extraction (e.g. significant particulate load) or where only a single sample container is received.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2231850**	Page	: 1 of 5
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP	Date Samples Received	: 27-Oct-2022
Site	: ----	Issue Date	: 08-Nov-2022
Sampler	: [redacted]	No. of samples received	: 2
Order number	: 60612563 3.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X-INJ	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with mobile phase solvent. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to analysis.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

No. of samples received	: 2		
No. of samples analysed	: 2		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Sample '0861_MW054D_221109' required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB2233627**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Telephone	: [redacted]
Project	: [redacted]	Date Samples Received	: 09-Nov-2022
Site	: ----	Issue Date	: 18-Nov-2022
Sampler	: [redacted]	No. of samples received	: 2
Order number	: 60612563 3.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please be advised two sample sets were received labelled "0861_QC" and no sample sets were received labelled "0861_QC198 and 0861_QC298". ALS has allocated "0861_QC198 and 0861_QC298" from the "0861_QC" samples at random. If you would like to discuss this further please contact Client Services at ALSEnviro.Brisbane@alsglobal.com.**
- ***SRN Reissued 14/11/2022 Please be advised that the project number 60612563 3.1 has been removed from the project name field as per email request from** [redacted]
- **14/11/22: SRN has been resent to acknowledge the changes in sample ID's as requested by client. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Sample "0861_QC298" has been forwarded to NMI, as requested. Please note that this will incur a freight forwarding fee.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	[redacted]	Telephone	: +[redacted]
Project	: 60612563 3.1 QLD_0861_PFASOMP	Date Samples Received	: 09-Nov-2022 17:31
Order number	: 60612563 3.1	Date Analysis Commenced	: 11-Nov-2022
C-O-C number	: ----	Issue Date	: 18-Nov-2022 14:09
Sampler	: [redacted]		
Site	: ----		
Quote number	: SY/139/19 V3_QLD		
No. of samples received	: 6		
No. of samples analysed	: 6		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Assistant Laboratory Manager	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIVED CONDITION

Date samples received:	25-OCT-2022
Sample received in good order:	Yes
NMI Quotation no. provided:	
Client purchase order number:	60612563_3_1
Temperature of samples:	Chilled
Comments:	ALL OK
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

REPORT OF ANALYSIS

PFOS and PFHxS are quantified using a combined branched and linear standard, linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.
LOR values for Sample N22/020947 were raised due to the low solid contentô in the sample.

SAMPLE RECEIVED CONDITION

Date samples received:	2-NOV-2022
Sample received in good order:	Yes
NMI Quotation no. provided:	60612563_3_1
Client purchase order number:	60612563_3_1
Temperature of samples:	Chilled
Comments:	
Mode of Delivery:	Courier

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

N22/021567
PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô

REPORT OF ANALYSIS

High PFAS surrogate recoveries accepted - results corrected for recovery.

to
N22/021570

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work.

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

1.0 Introduction

1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) (Defence, 2020) at the Royal Australian Air Force (RAAF) Base Amberley (the 'Base') and the Management Area in the South Queensland Region. The locations of the Base and Management Area are shown on **Figure 1** in **Appendix A**.

The OMP for RAAF Base Amberley (Defence, 2020) includes the following sampling events:

- Biannual groundwater, surface water and sediment sampling in April and October in 2020, 2021, and 2022.

In July 2022, Defence extended the period for the OMP sampling events by two years with additional groundwater sampling events scheduled for April 2023, October 2023 and April 2024.

Following each biannual sampling event, sampling event factual reports will be prepared. Annual Interpretive Reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the biannual sampling event completed in April / May 2023[1], specifically highlighting first-time detections and/or new exceedances of human health screening criteria for perflurooctanesulfonic acid (PFOS) + perfluorohexane sulfonate (PFHxS) and / or perflurooctanoic acid (PFOA).

This report has been prepared in accordance with the *PFAS OMP Factual Reports Guidance,* v 0.2, May 2021 (Defence, 2021).

1.2 Objectives

The objectives of the OMP are to:

- Implement the OMP prepared as part of the PFAS Management Area Plan (PMAP); and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration and transport of PFAS at RAAF Base Amberley.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

The objective of this phase of works was to implement the scope of works for the April/May 2023 sampling event in general accordance with the sampling analysis and quality plan (SAQP) (AECOM, 2023a).

[1] Due to military exercises at RAAF Base Amberley in April 2023, the northern portion of the Base was not accessible and consequently sampling in this area was delayed until 22 and 23 May 2023. This sampling event is therefore referred to as the April-May 2023 sampling event.

2.0 Scope of Work

The sampling event at RAAF Base Amberley was completed in general accordance with the SAQP (AECOM, 2023a). In summary, the scope of works for this sampling event included:

- Obtaining access to private properties where some groundwater sampling locations are situated.
- Review of the SAQP prior to the monitoring event to ensure compliance with the following:
  - PFAS National Environmental Management Plan (NEMP) V2.0 (HEPA, 2020);
  - National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM, 2013);
  - Defence Routine Environment Water Quality Monitoring Manual, 2018;
  - Defence, Contamination Management Manual, 2018 amended 2021;
  - AS/NZ 5667:1998 Water quality – Sampling (Standards Australia 1998);
  - Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, 2018);
  - Relevant State regulatory guidelines.
- Gauging of groundwater elevation in 38 of 40 monitoring wells prior to collection of samples (refer to **Table 1** below, and **Figure 2** in **Appendix A** for specific locations). Two monitoring wells (MW049 and MW056S) were not found and could not be gauged, refer to **Table 8** for more details.
- Collection of groundwater samples at 38 of 40 locations including 33 on-Base monitoring wells and five off-Base monitoring well locations. Details are included in **Table 1** below and **Figure 2** in **Appendix A**. Two monitoring wells (MW049 and MW056S) were not found and could not be sampled, refer to **Table 8** for more details.
- Collection of co-located surface water and sediment samples at 49 locations, including 42 on-Base locations, and seven off-Base locations (refer below to **Table 2** and **Table 3** and **Figure 3** in **Appendix A**). All 49 sediment samples were collected and 47 of 49 surface water samples. Two sampling locations were dry (SW033 and SW038) and surface water samples could not be collected during this sampling event. Refer to **Table 8** for more details.
- Downloading groundwater level data from data loggers installed in seven groundwater monitoring wells (MW025, MW028, MW032, MW055S, MW055D, MW056S, MW056I), refer to **Figure 2** in **Appendix A** for data logger locations. The datalogger from one monitoring well, MW056S could not be downloaded as the well could not be found. Partial data (until 31 January 2023) was downloaded from three dataloggers (MW028, MW055S and MW056I), refer to **Table 8** for more details.
- Collection of intra- and inter- laboratory duplicate samples at a rate of 1 in 10 primary samples, one field blank sample per day, one rinsate sample per fieldwork day and one trip blank per batch.
- Analysis of all samples for the PFAS suite at the standard limit of reporting (LOR).
- Data management of all OMP field and laboratory data in the Defence ESdat database.
- Preparation of results letters for off-Base stakeholders.
- Preparation of this Sampling Event Factual Report.

Table 1 Groundwater Sampling Locations

Location		Monitoring Wells
Source Areas	Former Topside Aviation Fire Training Area (FTA) and current FTA Fire Pad (Confirmed Primary Source Area [CPSA] A)	MW002, MW033
	B Hangar 410 and Former Landfill	MW047
	Frogs Hollow Former Fire Training School Location (CPSA B)	MW037
	Sewage Treatment Plant (CPSA D)	MW021, MW032
	Historical Containment Pond (CPSA E)	MW048
	Former Fire Training Area and Operational Testing Area (CPSA G)	MW050
	Former Fire Training Area and Operational Testing Area (CPSA J)	MW005
	Potential Former Fire Training Area and Operations Test Area (CPSA L)	MW006, MW023, MW028, MW029, MW036
	Former Fuel Farm 1 and Triple Interceptor Pit (CPSA M)	MW309
	Potential Location of Aircraft F-4E Incident (CPSA T)	MW035
	AFFF Wastewater Holding Tank (CPSA V)	MW046
	Fire Fighting Training School (CPSA W)	MW026, MW030, MW031, MW042, MW043
	Former Structural and Open Pit Fire Training Area and Former Secondary Fire Training Area (CPSA X and Y)	MW041
	Fuel UST with AFFF listing (CPSA Z)	MW020
	Triple Interceptor Pits at Engine Test Cell Facilities 1 and 2 (CPSA AA)	MW007
	Areas used for irrigation – former grassed runways (CPSA BB)	MW012
	Former Landfill (CPSA CC)	MW022
	Former Fire Training Area on Disused Runway (CPSA DD)	MW049
Off-Base Warrill Creek		*MW054S, MW054D,* MW057S, MW057I
On-Base Bremer River		MW024, MW025, MW034, MW044, MW055S, MW055D
Off-Base Bremer River		MW056S, MW056I

Note: *Italics* indicates that the well is located on private property.
Wells with S, D or I are adjacent monitoring wells that are screened in different aquifers. 'S' indicates the well is screened in the shallow aquifer, 'D' or 'I' indicates the well is screened in the deeper aquifer, either Tertiary Formation or Walloon Coal Measures. MW056I and MW057I were previously known as MW056D and MW057D. MW002 was formerly known as MW2.

Table 2 Surface Water Sampling Locations

Area	Surface Water Sampling Locations	Number of Locations
On-Base Drains	SW002, SW003, SW008, SW011, SW021, SW027, SW028, SW030, SW033, SW037, SW038, SW041, SW048, SW049, SW053, SW056, SW059, SW064, SW067, SW076, SW079, SW080	22
Warrill Creek	SW004, SW005, SW009, SW015, SW016, SW018**, SW020, SW026*, SW034, SW043*, SW099, SW100	12
Bremer River	SW025*, SW036, SW039*, SW040*, SW045*, SW047, SW050, SW051, SW052, SW088, SW089, SW090, SW091, SW094, SW098*	15

Note: * denotes off-Base sampling location. ** As SW018 was collected from a different location it was renamed SW304.

Table 3 Sediment Sampling Locations

Area	Sediment Sampling Locations	Number of Locations
On-Base Drains	SD002, SD003, SD008, SD011, SD021, SD027, SD028, SD030, SD033, SD037, SD038, SD041, SD048, SD049, SD053, SD056, SD059, SD079, SD064, SD067, SD076, SD080	22
Warrill Creek	SD004, SD005, SD009, SD015, SD016, SD018**, SD020, SD026*, SD034, SD043*, SD099, SD100	12
Bremer River	SD025*, SD036, SD039*, SD040*, SD045*, SD047, SD050, SD051, SD052, SD088, SD089, SD090, SD091, SD094, SD098*	15

Note: * denotes off-Base sampling location. ** As SW018 was collected from a different location it was renamed SD304.

3.0 Methodology

The methodology used for the April/May 2023 sampling event was completed in general accordance with the SAQP (AECOM, 2023a) and is summarised below. Deviations from the SAQP are discussed in **Section 3.6**.

3.1 Groundwater Sampling Methodology

The groundwater sampling methodology is outlined in **Table 4** below.

Table 4 Groundwater Sampling Methodology

Item	Details
Groundwater gauging	The depth to groundwater was measured in each monitoring well using an interface probe prior to the installation of HydraSleeves™, or if HydraSleeves™ were already installed, prior to retrieval of the HydraSleeve™. Where water level transducers were installed, the well was gauged prior to the removal of the water level transducer. Gauging was conducted in as short a time as possible, however, due to the number of wells and different requirements for accessing the monitoring well locations, the gauging took place over 11 days between 17 April and 23 May 2023. Water level transducers are installed in seven monitoring wells to continuously record groundwater levels (MW025, MW028, MW032, MW055S, MW055D, MW056S, MW056I). A barometric logger is installed in MW028. Data collected since the previous OMP sampling event in October 2022 were downloaded from MW025, MW028, MW032, MW055S, MW055D and MW056I. Monitoring wells MW056S could not be found so data were not downloaded. The water level transducer in MW055S was not functioning and was removed from the well. Data collected until 31 January 2023 was retrieved, however, no data for February to April 2023 was available. Partial data for MW028 and MW056I was also retrieved until 31 January 2023. The dataloggers were reset and reinstalled in the wells.
Field parameters	Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for all groundwater samples. Field parameters were obtained ex situ, using water remaining in the HydraSleeve™ following sampling. The probe on the water quality meter was decontaminated prior to being placed in the water sample.
Sampling methodology	Groundwater samples were collected from the monitoring wells using no-purge methodology HydraSleeves™, which were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round. Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in 17 of the monitoring wells in preparation for the next sampling round. HydraSleeves™ were not installed in 21 monitoring wells as they are regularly used for monitoring on other programs. Bailers were used to collect groundwater samples from two monitoring wells, MW024 and MW031.
QA/QC samples	Field QA/QC (Quality Assurance/Quality Control) samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for analysis for the PFAS suite using the standard LOR. ALS Environmental (ALS) Brisbane, Queensland was used as the primary laboratory. The National Measurement Institute (NMI) of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for groundwater analyses are certified by the National Association of Testing Authorities (NATA). Chain of custody (COC) forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.2 Surface Water Sampling Methodology

The methodology used for the April/May 2023 sampling event was completed in general accordance with the SAQP (AECOM, 2023a) and is summarised in **Table 5** below.

Table 5 Surface Water Sampling Methodology

Item	Details
Field parameters	Temperature, EC, DO, ORP, pH and observations of water quality were recorded for all surface water samples.
Sample collection methodology	Samples were collected from immediately below the water surface to minimise collection of sediment or floating materials in the samples. At each location, a new, laboratory supplied container was lowered into the water with the cap immediately applied once the container was full.
QA/QC Samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard LOR. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for surface water analyses were certified by the NATA. COC forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.3 Sediment Sampling Methodology

The methodology used for the April/May 2023 sampling event was completed in general accordance with the SAQP (AECOM, 2023a) and is summarised in **Table 6** below.

Table 6 Sediment Sampling Methodology

Item	Details
Sample collection methodology	Samples representative of potentially deposited sediments were collected from within the water body where possible. Sediment samples were collected either by hand using new nitrile gloves or from the scoop on the sampling pole. A new laboratory-supplied container was filled at each location.
Logging	Sediment characterisation details were recorded for each sample.
QA/QC samples	Field QA/QC samples collected included intra-laboratory duplicate and inter-laboratory duplicate samples (i.e. splits), field blanks, rinsate samples and trip blanks. Refer to **Appendix C** for assessment of QA/QC sample data. Equipment calibration certificates are presented in **Appendix F**.
Sample analysis	All primary samples were submitted for PFAS suite using the standard LOR. ALS Brisbane, Queensland was used as the primary laboratory. NMI of Sydney, NSW was used as the secondary laboratory. ALS and NMI methods for sediment analyses were certified by the NATA. COC forms are presented in **Appendix D**, laboratory analytical certificates are presented in **Appendix E**.

3.4 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the dataset includes the following:

- PFAS NEMP, V2.0 (HEPA, 2020);
- Department of Health, 2019. *Health Based Guidance Values for PFAS for use in site investigations in Australia,* September 2019;
- NHMRC, 2019. *Guidance on PFAS in Recreational Water*, August 2019 (NHMRC, 2019);
- *National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013* (ASC NEPM, 2013).

In accordance with the OMP (Defence, 2020) and SAQP (AECOM, 2023a), the adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** below.

Table 7 Summary of Adopted Screening Criteria

Pathway	Compound	Criteria	Comment / Reference
Human Health Receptors			
Drinking water – groundwater	PFOS + PFHxS	0.07 µg/L	The values are from the PFAS NEMP (HEPA, 2020). *All groundwater results will be compared to these criteria.*
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	The values presented are from the PFAS NEMP (HEPA, 2020), which are sourced from NHMRC (2019). *All surface water results will be compared to these criteria.*
	PFOA	10 µg/L	
Ecological Receptors			
Freshwater (95% species protection values)	PFOS	0.13 µg/L	The values are from the PFAS NEMP (HEPA, 2020). *All surface water and groundwater results will be compared to these criteria.*
	PFOA	220 µg/L	
Freshwater (99% species protection values)	PFOS	0.00023 µg/L	
	PFOA	19 µg/L	

There are no current HEPA (2020) endorsed human health or ecological guideline values available for PFAS in sediment.

3.5 Data Quality Objectives and Data Validation

The data quality objectives and data quality indicators adopted for these works are presented in the SAQP (AECOM, 2023a).

Data validation assessment is provided in **Appendix C**. Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that, with one exception, the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

The reported concentrations for SW/SD018 were different compared to historical results, and it was identified that the samples were collected from a drainage channel entering Warrill Creek, rather than

Warrill Creek. Consequently, these samples have been allocated new sampling identification numbers (SW/SD304).

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (Defence, 2018) Annex L Guidance on Data Management (amended 2021) requirements.

3.6 Deviations from the SAQP

Table 8 lists the deviations from the SAQP (AECOM, 2023a) during this sampling event. The deviations are considered to be of low significance and have a minimal impact on the sampling event results.

Table 8 Deviations from the SAQP during Sampling Event for April / May 2023

SAQP	April / May 2023 Sampling Event	Impact on OMP Program
Collection of groundwater samples at 40 locations	• MW049 and MW056S could not be sampled as they could not be found due to the presence of dense vegetation.	• The non-sampling of MW049 and MW056S reduced the spatial coverage of the groundwater monitoring network to the south and east of the Base.
Collection of surface water samples at 49 locations	• Two surface water samples were not collected at SW033 and SW038 as these locations were dry. • Anomalous results for SW018 indicated the samples SW/SD018 were inadvertently collected from a drainage channel entering Warrill Creek rather than Warrill Creek.	• The non-sampling of SW033 and SW038 means there are no data available to evaluate PFAS concentrations at these drain locations. The non-presence of water means there were no PFAS migrating in surface water at the time of the visit. • Sampling results for SW/SD018 have been reallocated to a new sampling identification number, SW/SD304.
Download of data from seven data loggers	• The datalogger from MW056S could not be retrieved as the well could not be found. • The datalogger in MW055S was not functioning. Data collected until 31 January 2023 was able to be retrieved. • Data from MW028 and MW056I were available until 31 January 2023.	• Groundwater level data from MW056S is not available. This reduces the understanding of groundwater level changes in 2022-2023 at this off-site area adjacent to Bremer River. • Groundwater level data in MW055S, MW028 and MW056I between February and April 2023 were not available. This reduces the understanding of groundwater level changes in 2023 at these portion of the Base near Bremer River. The datalogger in MW055S was replaced later in May 2023. The dataloggers in MW028 and MW056I were reset and reinstalled in the wells.
Groundwater methodology	• Two monitoring wells, MW024 and MW031, were sampled by bailing.	• Overall, there is not expected to be an impact by using bailing. However, the sample from MW024 reported a new maximum sum of PFOS and PFHxS concentration. The laboratory report indicated that LORs for PFAS were raised due to matrix interference. The elevated concentrations in the sample from MW024 could potentially be due to the presence of sediment in the bailed

SAQP	April / May 2023 Sampling Event	Impact on OMP Program
		sample. Resampling of the well in October 2023 will verify the concentrations.
Collection of samples during a single sampling event	• Due to military exercises in the Hansens Farm Conservation Area (northern portion of Base), access was restricted until 23 May 2023, which delayed the collection of samples by three weeks.	• The delay of three weeks in completing sampling is considered to be a relatively short period and is unlikely to impact the OMP program.
Collection of water quality field parameters	• The DO sensor on the water quality meter was malfunctioning during the sampling event. DO measurements could not be collected for nine surface water samples and three groundwater samples.	• The non-collection of DO measurements has minimal impact on the sampling event as a large dataset has been collected.

4.0 Field Observations and Results

The April/May 2023 sampling event was completed between 17 April and 23 May 2023. The results are summarised in following sections.

4.1 Groundwater

4.1.1 Groundwater Observations and Field Measurements

Table 9 Groundwater Observations and Field Measurements

Item	Details
Access	All monitoring wells were accessible except for MW049 and MW056S which were not found due to heavy vegetation.
Monitoring well network	No issues were identified in 36 monitoring wells sampled. The gatic covers at two locations were damaged, MW042 and MW050.
Field observations	Groundwater from one monitoring well had a sulfuric odour (MW033). Groundwater from five monitoring wells had an organic odour (MW041, MW043, MW044, MW046, MW056I). No other visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells. Field observations are presented in **Table T1** in **Appendix B**.
Depth to groundwater	Depth to groundwater in the Alluvium was between 2.29 and 14.98 metres below top of casing (mbtoc). Depth to groundwater in the Tertiary Formation was between 5.67 and 15.95 mbtoc. Depth to groundwater in the Walloon Coal Measures was between 5.43 and 24.34 mbtoc. Groundwater elevation in the Alluvium was between 9.29 and 18.44 metres above Australian height datum (mAHD). Groundwater elevation in the Tertiary Formation was between 8.73 and 29.00 mAHD. Groundwater elevation in the Walloon Coal Measures was between 14.04 and 38.09 mAHD. Groundwater gauging data are presented in **Table T1** in **Appendix B**. Water level transducer results for six monitoring wells are presented in **Appendix G**.
Groundwater flow direction	Inferred groundwater contours and groundwater flow directions at the Base in April/May 2023 for the Alluvium/Tertiary Formation are shown on **Figure 4** in **Appendix A**. The inferred local groundwater flow direction is towards the northeast, east and southeast in the direction of Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2023b). Inferred groundwater contours and groundwater flow directions at the Base in April/May 2023 for the Walloon Coal Measures are shown on **Figure 5** in **Appendix A**. The inferred local groundwater flow direction is towards the northeast and east in the direction of Bremer River and Warrill Creek. The inferred flow direction is consistent with previous sampling events (AECOM, 2023b).

<tr><td>Weather conditions</td><td>Weather conditions during groundwater sampling were dry and sunny with maximum daily temperatures between 23.1 and 30.2°C. A total of 64.6 mm of rainfall was recorded during the sampling period between 17 April and 23 May 2023 (Bureau of Meteorology (BoM) station 040004 – ‘Amberley) with the majority occurring during rainfall events between 15 and 17 May 2023 (54.6 mm).</td></tr>
<tr><td>Estate management works or training activities</td><td>During the sampling event, remediation works relating to one of the main source areas, the sewage treatment plant, commenced in April 2023. The remediation works involved excavation of soil and stockpiling within an area adjacent to the southern portion of the Base, near MW032 and Warrill Creek.</td></tr>
</table>

4.1.2 Groundwater Analytical Results

The groundwater analytical results for PFAS from the sampling event are presented in **Table T2** in **Appendix B**. There was one new exceedance of the drinking water guideline value for sum of PFOS and PFHxS in the sample from MW024 (0.16 µg/L) located in the eastern portion of the Base adjacent to Bremer River. The laboratory report identified that the LORs were raised in the sample from MW024 due to matrix interference indicating the potential presence of sediment in the water sample and the detection of elevated PFAS concentration may be due to analysis of sediment. There were no first-time detections of PFAS compared to the historical dataset. A summary is presented in **Table 10**. The location of MW024 is shown on **Figure 6** in **Appendix A**.

Concentrations of sum of PFOS and PFHxS in 22 of the 38 groundwater samples exceeded the NEMP (HEPA, 2020) drinking water guideline value with eight groundwater samples exceeding the NEMP (HEPA, 2020) PFOA drinking water guideline value[2].

PFAS were detected above the LOR in 28 of the 38 groundwater samples collected and all these samples exceeded the NEMP (HEPA, 2020) ecological guideline value for PFOS for 99% protection of

[2] The number of exceedances identified only includes the primary samples. Quality assurance samples have not been included.

ecosystems with 20 of these samples also exceeding the 95% protection guideline value. None of the groundwater samples exceeded the NEMP (HEPA, 2020) PFOA ecological guideline values for 99% and 95% protection of freshwater species.

There were seven new maximum sum of PFOS and PFHxS concentrations recorded during the sampling event in groundwater samples from MW020 (134 µg/L), MW021 (142 µg/L), MW024 (0.16 µg/L), MW030 (12.9 µg/L), MW043 (0.70 µg/L), MW044 (0.04 µg/L) and MW050 (0.35 µg/L). There were three new maximum PFOA concentrations recorded in the samples from MW020 (5.59 µg/L), MW021 (4.45 µg/L) and MW030 (1.37 µg/L).

Table 10 First-time Detections or New Exceedances of Sum of PFOS and PFHxS or PFOA in Groundwater

First-time Detection / New Exceedance	Ground water sampling location	Sum of PFOS+PFHxS concentration (µg/L)		PFOA concentration (µg/L)	
		April/May 2023	Historical maximum	April/May 2023	Historical maximum
First-time detection or new exceedance of PFOS and PFHxS or PFOA in groundwater	MW024	0.16	0.04	<0.01	<0.01

Note: Yellow shading indicates a sample with a new exceedance above NEMP (HEPA, 2020) human health drinking water guideline value (refer to **Table 7**), blue indicates a first-time detection.

4.2 Surface Water

4.2.1 Surface Water Observations and Field Measurements

Table 11 Surface Water Observations and Field Measurements

<table>
<tr><th>Item</th><th>Details</th></tr>
<tr><td>Access</td><td>All surface water sampling locations were accessed during the sampling event. Two locations were dry (SW033 and SW038) and surface water samples could not be collected.</td></tr>
<tr><td>Field observations</td><td>A slight sheen was observed at sampling location SW041, a drain sample location. Organic odours were observed at 15 locations (SW015, SW025, SW026, SW040, SW043, SW045, SW051, SW053, SW064, SW067, SW079, SW080, SW098, SW099, SW100). No visual or olfactory indications of contamination were observed during the sampling of the other surface water sampling locations. Field observations are reported in Table T3, Appendix B.</td></tr>
<tr><td>Surface water quality parameter field measurements</td><td>Surface water quality parameters were measured prior to collecting surface water samples. The readings are presented in Table T3 in Appendix B and are summarised below:
<table>
<tr><th>Unit</th><th>Parameter</th><th>Min.</th><th>Max.</th><th>Comment</th></tr>
<tr><td rowspan="5">Drain</td><td>DO (mg/L)</td><td>0.37</td><td>3.32</td><td>Poorly to moderately oxygenated</td></tr>

<tr><td>ORP (mV)</td><td>213</td><td>458</td><td>Mildly to moderately reducing</td></tr>
<tr><td>Temperature (°C)</td><td>13.1</td><td>23.5</td><td>-</td></tr>
</table>
The measured parameter ranges are consistent with previous sampling event results (AECOM 2023b).</td></tr>
<tr><td>Weather Conditions</td><td>Weather conditions during groundwater sampling were dry and sunny with maximum daily temperatures between 23.1 and 30.2°C. A total of 64.6 mm of rainfall was recorded during the sampling period between 17 April and 23 May 2023 (BoM station 040004 – ‘Amberley) with the majority occurring during rainfall events between 15 and 17 May 2023 (54.6 mm).</td></tr>
<tr><td>Estate Management Works or Training Activities</td><td>During the sampling event, remediation works relating to one of the main source areas, the sewage treatment plant, commenced in April 2023. The remediation works involved excavation of soil and stockpiling within an area adjacent to the southern portion of the Base, near MW032 and Warrill Creek.</td></tr>
</table>

4.2.2 Surface Water Analytical Results

The analytical results for PFAS in surface water from this sampling event are presented in **Table T4** in **Appendix B**. As discussed in **Section 3.5** and **Appendix C**. There were no first-time detections or new exceedances of sum of PFOS and PFHxS and PFOA, other than the new sampling location, SW304 located at the point where a drainage channel enters Warrill Creek (sum of PFOS and PFHxS was 16.1 µg/L and PFOA was 0.15 µg/L). The concentration of sum of PFOS and PFHxS exceeded the NEMP (HEPA, 2020) recreational water guideline value. The ecological guideline for PFOS for 99% species protection of ecosystems was also exceeded.

Concentrations of sum of PFOS and PFHxS in 15 of the 47 surface water samples exceeded the NEMP (HEPA, 2020) recreational water guideline value with none of the samples exceeding the PFOA guideline value.

A total of 38 of 47 samples exceeded the NEMP (HEPA, 2020) ecological guideline for PFOS for 99% protection of ecosystems with 22 of these samples also exceeding the 95% protection guideline value. None of the samples exceeded the NEMP (HEPA, 2020) PFOA ecological guideline values for either 95% or 99% protection of freshwater species.

New maximum sum of PFOS and PFHxS concentrations were recorded in the surface water samples from SW005 (17.6 µg/L), SW052 (0.03 µg/L) and SW100 (0.28 µg/L). New maximum concentrations of PFOA were recorded in the samples from SW005 (0.25 µg/L) and SW049 (0.07 µg/L).

4.3 Sediment

4.3.1 Sediment Observations and Field Measurements

Table 12 Sediment Observations

Item	Details
Access	All sediment sample locations were accessible.
Field Observations	Sediment logging data are presented in **Table T5** in **Appendix B**. 42 of the 49 samples had an organic odour. No visible indications of contamination were observed during sediment sampling.
Weather Conditions	Weather conditions during groundwater sampling were dry and sunny with maximum daily temperatures between 23.1 and 30.2°C. A total of 64.6 mm of rainfall was recorded during the sampling period between 17 April and 23 May 2023 (BoM station 040004 – 'Amberley) with the majority occurring during rainfall events between 15 and 17 May 2023 (54.6 mm).
Estate Management Works or Training Activities	During the sampling event, remediation works relating to one of the main source areas, the sewage treatment plant, commenced in April 2023. The remediation works involved excavation of soil and stockpiling within an area adjacent to the southern portion of the Base, near MW032 and Warrill Creek.

4.3.2 Sediment Analytical Results

The analytical results for PFAS in sediment from this sampling event are presented in **Table T6** in **Appendix B**. There was one first-time detection from the historical dataset. This was in the sample from SD025, which reported a concentration slightly above the limit of reporting (0.0005 mg/kg). The location of SD025 is shown on **Figure 8**, **Appendix A**. The new location SD304 also recorded a first-time detection with sum of PFOS and PFHxS up to 0.223 mg/kg in the triplicate sample (QC210) and up to 0.0006 mg/kg in the duplicate sample (QC110). New maximum sum of PFOS and PFHxS concentrations were recorded at SD008 (0.262 mg/kg), SD009 (0.0725 mg/kg), SD025 (0.0005 mg/kg), SD041 (1.80 mg/kg), SD045 (0.0084 mg/kg), SD052 (0.0015 mg/kg), SD079 (1.94 mg/kg). A new maximum concentration of PFOA was recorded at SD079 (0.018 mg/kg).

5.0 Summary and Next Sampling Event

5.1 Summary of Sampling Event

A groundwater, surface water and sediment sampling event was completed within the RAAF Base Amberley Management Area between 17 April and 23 May 2023. The program included sampling of groundwater from 40 monitoring wells and 49 co-located surface water and sediment sampling locations. In total, 38 groundwater samples 47 surface water samples and 49 sediment samples were collected and analysed.

Table 13 summarises the findings of the April/May 2023 sampling event and the recommended actions.

Table 13 Summary of Sampling Event

Item	Comment	Recommended Actions
Access to sampling locations	All groundwater sampling locations were accessible except for MW049 and MW056S due to the presence of heavy vegetation. All surface water and sediment samples were collected except for surface water samples from SW033 and SW038 as these locations were dry at the time of sampling.	The locations of MW049 and MW056S are heavily vegetated. The off-Base location MW056S would need to mowed by the Council to allow the monitoring well to be found. Surface water sampling locations SW033 and SW038 should be reinspected during the next sampling event in October 2023. Sampling of on-Base drains should continue to be timed to occur after a rainfall event.
Groundwater level loggers	Data from six groundwater level loggers were retrieved and data downloaded. The datalogger installed in MW056S could not be retrieved as the monitoring well could not be found due to the presence of heavy vegetation. The datalogger in MW055S was not functioning, however, data until 31 January 2023 was retrieved. Dataloggers in MW028 and MW056I only recorded data until 31 January 2023.	The datalogger from MW056S will be retrieved in the next sampling event, if the monitoring well is found. The datalogger in MW055S was replaced later in May 2023. The dataloggers in MW028 and MW056I were reset and reinstalled in the wells.
Monitoring well network condition	No issues were identified in 36 of the 38 monitoring wells sampled. The gatic covers for MW042 and MW050 have been damaged.	The gatic covers for MW042 and MW050 require repair.
Analytical results	Sum of PFOS and PFHxS or PFOA concentrations in 37 out of 38 groundwater samples were consistent with historical results. Seven groundwater sampling locations reported new maximum concentrations or either sum of PFOS and PFHxS or PFOA. The result from SW/SD018 were considered anomalous and indicated a drainage channel was sampled rather than Warrill Creek. These results were	Ongoing monitoring in accordance with the OMP. A review of the OMP is being conducted during 2023 which may change the October 2023 and April 2024 sampling events.

Item	Comment	Recommended Actions
	allocated new sampling identification numbers (SW/SD304). Sum of PFOS and PFHxS or PFOA concentrations in the other 46 surface water samples collected were consistent with historical results. Four surface water sampling locations reported new maximum concentrations. Sum of PFOS and PFHxS or PFOA concentrations were consistent with historical results in all sediment samples. Eight sediment samples reported new maximum concentrations for sum of PFOS and PFHxS or PFOA.	
First-time detections of sum of PFOS and PFHxS or PFOA	A first-time detection of sum of PFOS and PFHxS was reported for sediment sample SD025. The concentration was equal to the laboratory limit of reporting. No first-time detections of sum of PFOS and PFHxS or PFOA above the laboratory LOR were recorded in any of the groundwater, surface water or other sediment samples collected, other than the new sampling location, SW/SD304 and sediment sample SD025.	Ongoing monitoring in accordance with the OMP.
New exceedance of NEMP (HEPA, 2020) guideline values	There was one new exceedance of the NEMP (HEPA, 2020) drinking water guideline value in groundwater. This was the sample from MW024. There was one new exceedance of the NEMP (HEPA, 2020) recreational water guideline value and one new exceedance of the ecological (99% species protection) guideline value in surface water. This was in the sample from SW304.	Ongoing monitoring in accordance with the OMP.

5.2 Upcoming Sampling Events

The next biannual sampling event is scheduled for October 2023.

5.3 Upcoming Interpretive Report

At the time of preparing this report, an interpretive report covering the period March 2021 to May 2023 is in preparation.

Notes
All Hydrasleeves™ were installed a minimum of 24 hours prior to sampling.
m - metres
mbtoc - metres below top of casing
mAHD - metres above Australian Height Datum
TOC - Top of Casing
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius

LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
HEPA is Heads of Environmental Protection Agencies
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values
Note that a concentration equal to the assessment criterion is not considered an exceedance.

Notes
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential
Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre
mV - millivolts
°C - degrees Celcius
* SW018 was renamed SW304.

Notes:
LOR is limit of reporting
µg/L is micrograms per litre
'-' denotes no analysis undertaken
'<' denotes concentration is less than
NEMP is National Environmental Mangement Plan
HEPA is Heads of Environmental Protection Agencies
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values
Note that a concentration equal to the assessment criterion is not considered an exceedance.
* SW018 was renamed SW304.

Location ID	Sample Date	Location	Sample Description	Odour	Notes on River Conditions
SD002	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Manmade drainage channel around 10m width, running west to east. Water is shallow, ~0.1m depth, pooled, clear with bright green algae and aquatic plants. Long grass in channel. Sediment slug to the east of the culvert.
SD003	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Wide and deep drainage channel, draining north west from the airstrip. Around 40m width and 10m depth. Steep eroded bank to the south west. Heavily vegetated channel with grass, reeds and trees. Reenforced north east bank with large angular boulders.
SD004	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Abundant woody debris in river channel. Eroded southern bank. Brown, flowing water, around 0.5m depth. Flowing west to east. Evidence of flooding (stacked debris).
SD005	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Brown, flowing water (west to east). Appears to be around 0.5m maximum depth. Clear, brown water with fish present. Established riparian vegetation on north bank. Steep eroded southern bank with no riparian vegetation, followed by grassed floodplain to the south. Woody debris within river channel.
SD008	28/04/2023	Drain	Clay, dark grey with organic matter.	Organic odour	Still, pooled water with gently sloping grassed banks. Reeds and grass within channel. Flows west to east. Maximum 1m depth. Maximum 5m width.
SD009	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Flowing, west to east, slightly cloudy, brown water. Around 1m depth, and around 10m width. Vegetated sediment island within creek with established trees and grasses. Woody debris within channel. Fish present. Southern bank issteep and eroded with no vegetation. North bank
SD011	17/04/2023	Drain	Clay,dark grey, fine to medium sub angular gravel, low plasticity.	Organic odour	Shallow, slowly flowing drainage channel. <40cm maximum depth. No riparian vegetation. Grassed banks. Cobble reenforcement of banks. Aquatic plants in drain.
SD015	26/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Gently flowing west to east. Slightly cloudy water. ~0.3m depth. Heavily vegetated on north bank with established trees and native grasses. Gently sloping north bank. South bank is steep with visible erosion and less vegetation.
SD016	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still, clear water, brown in colour. Established riparian vegetation on north bank. Woody debris within channel. Fish observed in creek. Rubbish filled embankment ~20m north consists of concrete slabs, construction material, steel debris.
SD020	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Clear, still water. Heavily vegetated riparian banks to the north and south. Water gently flowing west to east. Water depth maximum 0.3m. Evidence of flooding (debris in trees).
SD021	26/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Shallow, pooled, still water around 0.2m maximum depth. Thick grass and vegetation surrounding sample location.
SD025	26/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still pooled water. Flow direction south to north evidenced by debris build up. Black water with small aquatic surface water plants. Depth >1m, width ~20m. Sparcely vegetated banks. Gradual sloping banks (<10°), with steep drop at waters edge.
SD026	19/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still, pooled, deep water. Very narrow channel, around 2m width. Heavily vegetated banks with native grasses and well established trees. Steep banks. Woody debris within and across the channel. Flow direction south to north.
SD027	17/04/2023	Drain	Clay,dark grey, fine to medium sub angular gravel, low plasticity.	Organic odour	Heavily modified creek bed. Vegetated with reeds and trees. Flow direction east to west. Manmade cobble embankment to the south. Grassed, eroding bank to the north.
SD028	9/04/2023	Frogs Hollow Gully	Clay, dark brown, some mottling.	Organic odour	Pooled water channel with aquatic plants on the surface. Fish and tadpoles present. Long grass surrounding the channel (~1m high). No riparian vegetation. Relatively flat catchment (<5°) surrounding the channel. Water is black. Unable to see the bottom. Channel is ~ 2m width, and around 0.5m maximum depth. Appears to flow west to east.
SD030	17/04/2023	Drain	Silty Clay, light brown, low plasticity with some sand.	Organic odour	Drain beside road. Flat land surrounding. Manmade banks. No riparian vegetation. Grassed mown banks.
SD033	27/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Gently flowing east to west. Man made channel capturing runoff from training area and release from new water treatment tanks. Ponds immediatley adjacent to the south. Currently empty. Channel bed contains large angular cobbles and reenforcement wire.
SD034	28/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still brown water ~0.3m depth. Heavily vegetated riparian zones on both banks. Native grasses within channel. Rubbish observed in northern bank, including porcelain, glass, and rubber. Narrow drainage channel entering creek from the north to south at sample location.
SD036	22/05/2023	Bremer River	Clay, dark grey, slightly sandy with organic matter.	No odour	Pooled deep water in channel. Unable to see the bottom. Large established gums and trees in channel. Aquatic plants covering entire surface. Western bank vegetated with grass and trees. Eastern bank is gently sloping, vegetated with native grasses. Channel is within a regeneration area.
SD037	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Minimal water <0.1m depth. Still, pooled, and stagnant water. Very shallow drainage channel with mown grassed banks. Tall reeds around 2m high within channel.
SD038	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still poolled water >1m depth, ~3m width. Appears to flow west to east (based on the gradient of the land). Large fish observed. Man made embankments with large angular cobble bank reenforcement. Water is clear with a brown/green colour. Aquatic plants on surface. Reeds on banks. Surrounded by open, mown, grassed area.
SD039	26/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still pooled water beneath bridge. <0.2m depth. Large subangular boulders and cobbles within channel. Creek bed is vegetated with reeds and grasses and well established trees. Flow direction is S to N evidenced by woody debris within the creek.
SD040	18/04/2023	Bremer River	Gravelly silt, dark grey, with fine to coarse subangular gravel.	Organic odour	Large, deep, still dam, with brown coloured water. Around 20m width. Depth >1m. Heavily vegetated banks on both sides. Well established trees and native grasses on both gently sloping banks. Vegetated bank around 50m width on north side. Drainage channel entering the dam from the NW. Sample taken around 2m upstream of drainage channel.
SD041	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Clear, black, pooled, still water. Maximum 0.3m depth. Channel is heavily vegetated with tall reeds. Large angular boulders within channel.
SD043	19/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Clear, flowing creek. Flowing south to north. Erosion channels on eastern bank beneath the bridge. Black cracking clays. Banks are well vegetated. Channel is around 5m width.
SD045	18/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still, clear, brown water, flowing west to east. Small aquatic plants on surface. Well vegetated banks on both sides with native grasses and trees.Gently sloping banks with a steep drop off next to sampling point. Woody debris along banks.
SD047	22/05/2023	Bremer River	Clay, dark grey, slightly sandy with organic matter.	No odour	Deep pooled water. Very steep bank on the western side. Channel around 40m width. Vegetated island with well established gums and trees within the river channel.
SD048	27/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Drainage leads from hangar to the north ~40m. Land slopes to the south west. Mowed grassed area.
SD049	26/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Large dam at the bottom of a grassy slope. Around 100m diameter. Deep, still, brown water. Aquatic reeds surrounding the banks. Ducks and fish present. Slopes gently from the east to the west.
SD050	11/05/2023	Bremer River	Clay, dark grey, low plasticity.	Organic odour	Manmade drainage channel around 10m width, running W to E. Water is still and shallow. Around 0.2m depth. Banks are gently sloping and stabilised with large angular boulders. Aquatic plants within channel.
SD051	19/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Deep pooled, still water. Flow direction N to S evidenced by flood debris in trees. Very steep embankment. Channel around 5m width. Green scum covering entire surface. Woody debris within channel. Overland flow across embankments evident with rubbish (corrugated iron) running W to E. Heavily vegetated banks with native grasses, reeds, and trees.
SD052	26/04/2023	Bremer River	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Still, pooled, deep water. Narrow channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are heavily vegetated. Flow direction is W to E evidenced by flood debris in trees. Very steep banks.
SD053	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Manmade drainage channel surrounding the runway. Water flowing south to north. Very shallow. Concrete base with 4 drains entering
SD056	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Flat surrounding land. Very gently sloping banks. Channel is around 2m maximum width. Depth around 0.2m max. Grassed mown banks. Reeds and aquatic plants within channel. Still, pooled water.
SD059	17/04/2023	Drain	Silty Clay, light brown, low plasticity with some sand.	Organic odour	Still pooled water >1m depth, ~3m width. Appears to flow west to east (based on the gradient of the land). Large fish observed. Man made embankments with large angular cobble bank reenforcement. Water is clear with a brown/green colour. Aquatic plants on surface. Reeds on banks. Surrounded by open, mown, grassed area. H37
SD064	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Very shallow, narrow drainage channel bordering the runway. Mown grassed area surrounding sample location.
SD067	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Small drainage channel. Concrete culvert contains dark green water. Culvert is covered with a grill. Very shallow channel. Mown grassed banks. Dry during visit.
SD076	18/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Flat surrounding land. Very shallow banks. Channel is around 10m width. Very shallow water flowing E to W (~10cm). Channel vegetated with reeds around 1.5m high
SD079	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Very tall reeds in channel. Green and brown algae in channel. No flow. Shallow. Around 0.2m depth. Very gently sloping mown grassed banks.
SD080	21/04/2023	Drain	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Manmade drainage channel bordering the runway. 2m high reeds in channel. Sediment build up on the southern side of the culvert. Very gently sloping mown grassed banks.
SD088	22/05/2023	Bremer River	Clay, dark grey with organic matter.	No odour	Deep, wide channel. Entire surface is covered with small aquatic plants. Gently sloping vegetated banks. Woody debris within channel. Flow direction is west to east.
SD089	22/05/2023	Bremer River	Clay, dark grey, slightly sandy with organic matter.	No odour	Still, pooled, shallow water. Entire surface is covered with small aquatic plants. Woody debris across channel. Fallen trees across the banks. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
SD090	22/05/2023	Bremer River	Clay, dark grey, slightly sandy with organic matter.	No odour	Still, pooled, deep water. Channel is around 3m width. Entire surface is covered with small aquatic plants. Woody debris in channel. Banks are heavily vegetated. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
SD091	22/05/2023	Bremer River	Clay, dark grey, slightly sandy with organic matter.	No odour	Still, pooled, clear water. Small aquatic plants on surface. Woody debris within creek channel. Fallen trees across channel. Channel around 3m width. Water around 0.3m depth. Heavily vegetated banks. Banks are fenced off for regeneration. Flow direction is south to north evidenced by flood debris in trees. Very steep banks.
SD094	22/05/2023	Bremer River	Clay, dark grey with organic matter.	No odour	Shallow, pooled water in creek channel. Not flowing, clear, brown. Large woody debris within channel. Vegetated banks. Steep easterly bank, gently sloping on the west. Western bank is a revegetation area. Flow direction is north to south, evidenced by flood debris within the channel. Drainage channel entering the creek from the northwest to southeast. Heavily eroded.
SD098	18/04/2023	Bremer River	Silty Clay, dark grey wth organic matter.	Organic odour	Still pooled water beneath bridge. ~0.5m depth. Clear, with a brown colour. Water flow north to south evidenced by debris build up within creek. Film of white/green substance on water surface. Geofab on embankments. Vegetated banks on both sides with native grass and trees.
SD099	18/04/2023	Warrill Creek	Silty Clay, light brown, low plasticity with some sand.	Organic odour	Deep, wide channel. Brown, turbid water. Gently flowing south to north. Woody debris along banks. Grassed bank to the west. Vegetated with well established trees to the east.
SD100	19/04/2023	Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Deep, narrow channel, gently flowing east to west. Clear, green/brown colour. Flood debris in trees and on banks. Very steep north bank. Long grass and vegetation on south bank.
SD304	28/04/2023	Drain entering Warrill Creek	Silty Clay, dark grey, low plasticity with some fine grained sand.	Organic odour	Clear, gently flowing water W to E. Approximately 0.3m depth. Wood debris in river channel. Large angular cobbles in channel (~30 cm). Well vegetated on both banks. Creek bed contains native grass vegetation. Lots of rubbish observed, including bottles, concrete, metal, and asbestos. Construction rubble in creek channel.

Notes:
LOR is limit of reporting
mg/kg is milograms per kilogram
'-' denotes no analysis undertaken
'<' denotes concentration is less than
Denotes first time detection above LOR
Denotes new exceedance of human health guideline values
* SD018 was renamed SD304.

Analytical Data Validation

Appendix C Analytical Data Validation

DATA VALIDATION REPORT

Project No.:	60612563	**Validation by:** AA	**Date:** 06/06/2023
Client:	Department of Defence		
Site:	Royal Australian Airforce Base, Amberley		
Matrix type:	Groundwater, surface water, sediment	**Data verified by:** JP	**Date:** 06/06/2023
No. of primary samples:	38 groundwater, 47 surface water, 49 sediment		
Laboratory:	ALS (Brisbane), NMI (Sydney)	**Project Manager:** JP	
Lab reference:	EB2312057, EB2312062, EB2312761, EB2312770, EB2314270, EB2315514, RN1393124, RN1393133, RN1394931		

Key Issues:	With one exception, no key QA/QC issues were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project. The data are considered appropriate for use to meet the project objectives.

Field QA/QC

Sampling personnel	Sampling was conducted by AECOM environmental scientists between 17 April and 23 May 2023.
Sampling Methodology	Samples were collected using appropriate methods as identified within the main body of the report and as presented in the SAQP. Field parameters were measured using a water quality meter prior to sample collection. The probe on the water quality meter was decontaminated prior to use.
Chain of Custody	COC documents were completed as per AECOM procedures.
Rinsate Blank	Rinsate blank samples were collected at a frequency of one per day of sampling where appropriate (12 in total) during the monitoring between 17 April to 23 May 2023. Rinsate blank samples were collected from the decontaminated interface probe. Concentrations reported below the LOR for all analytes tested except for one sample, QC300, collected on 17 April 2023 where PFOS was detected (0.02 µg/L) marginally above the limit of reporting. See **Table C1**. The result is potentially a false positive. No first-time detections of PFOS were recorded during the sampling event.
Field Blanks	Field blank samples were collected at a frequency of one per day of sampling (12 in total between 17 April and 23 May 2023) by filling sample containers with laboratory supplied deionised water in the field. All field blanks reported concentrations below the LOR for the analytes tested. See **Table C1**.
Trip Blanks	Trip blank samples were present during the transport of samples collected between 17 April and 28 April 2023 for the primary laboratory samples. Trip blanks were present in four batches including two soil trip blanks and two water blanks. All concentrations were reported below the LOR, see **Table C1** (water) and **Table C2** (soil). The number of blanks analysed is lower than the target frequency in the SAQP (one per batch). This was because no trip blanks were available during the follow up visits to complete the sampling between 9-11 May and 22-23 May 2023. This minor non-compliance is not expected to impact data quality as PFAS are not volatile compounds and are unlikely to volatise during sample transport.
Frequency of field QC	Field duplicate (inter-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected. There were nine duplicates/triplicate sets for water samples (inclusive of groundwater and surface water samples) and five duplicates/triplicate sets for

	sediment samples (see **Tables C3, C4** and **C5**). The frequency of field QC achieves the expected frequency for each media type. The target frequency of one in ten primary samples was achieved for all matrices.
Handling and preservation	Primary, duplicate and triplicate samples were received preserved and chilled at the laboratory. All samples were received at the laboratory in appropriate sample containers with no sample container non-compliances noted.
Laboratory QA/QC	
Tests requested/reported	Samples were analysed and reported as requested on the COC.
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory Accreditation	The laboratory analysis was conducted by ALS Environmental Pty Ltd (Brisbane) a National Association of Testing Authorities (NATA) accredited laboratory. The triplicate samples were analysed at the National Measurement Institute (NMI) (Sydney), also a NATA accredited laboratory.
Frequency of laboratory QC	The laboratory reported a sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision, except for the following: Laboratory duplicates below expected rate of 10% for PFAS in the following batches: • EB2312057 (5.6%) 18 samples in batch • EB2312062 (3.6%) 56 samples in batch • EB2312761 (5.3%) 38 samples in batch • EB2312770 (0.0%) 14 samples in batch • EB2315514 (0.0%) 17 samples in batch Matrix spikes below expected rate of 5% for PFAS in the following batches: • EB2312057 (0.0%) 18 samples in batch • EB2312062 (1.8%) 56 samples in batch • EB2312761 (2.63%) 38 samples in batch • EB2312770 (0.0%) 14 samples in batch • EB2315514 (0.0%) 17 samples in batch The reason for insufficient matrix spikes and laboratory duplicates for these batches is due to the way the laboratory assigns the duplicates and matrix spikes and the availability of additional bottles. The laboratory LIMS assigns laboratory QC to samples in the analytical run; however, the runs may not allocate samples to allow for frequency compliance. However, as all other laboratory QC results met control limits this is not expected to impact data quality.
Method Blank	No method blank non-compliances were reported.
Laboratory duplicate RPDs	Laboratory duplicate Relative Percentage Differences (RPD) were within control limits for all samples except for the following: • EB2312062 – RPDs exceeded the LOR based limits (0-20%) in one sediment sample, 0861_SD003_230418, for PFOS (29.9%). The laboratory reported that the sample 0861_SD003_230418, showed poor duplicate results due to sample heterogeneity. These results are not expected to impact data quality.
Laboratory control spike recovery	All Laboratory Control Spikes (LCS) recoveries (where reported) were within control limits, except: • EB2312057 (water): LCS recovery for MeFOSAA and 10:2 FTS were greater than the upper control limit. • EB2312062 (soil): LCS recovery for 10:2 FTS was greater than the upper control limit. • EB2314270 (water): LCS recovery for 10:2 FTS was greater than the upper control limit.

	LCS are known, interference-free matrix spiked with target analytes or certified reference material. The purpose of this quality control type is to monitor precision and accuracy independent of sample matrix and to indicate if the analytical procedure is in control and evaluates the laboratory capability to report unbiased results. Although some non-conformances have been detected in a small number of QC samples, the non-conformances do not include the key analytes, PFHxS and PFOS so the understanding of the concentrations of these compounds is not impacted.
Matrix spike recovery	All matrix spike (MS) recoveries (where reported) were within control limits, except: • EB2312057 (soil): MS recovery for PFPeS, PFOS, PFTrDA and MeFOSA in 0861_SD026_230419 was either greater or lower than the data quality objective. This was confirmed by re-extraction and re-analysis. • EB2312062 (soil): MS recovery for PFHxS and PFOS in 0861_MW048_230417 was not determined. • EB2312761 (water): MS recovery for 10:2 FTS in an anonymous sample was greater than the upper data quality objective. • EB2315514 (soil): MS recovery for PFDS in sample 0861_SD047_230522 was not determined. This indicates that matrix interference may have occurred in the sample from SD026, MW048 and SD047. Review of the results for these samples did not indicate anomalies. This non-conformance is not expected to impact data quality.
Surrogate spike recovery	Surrogate spike recoveries were within control limits for all samples.
QA/QC Data Evaluation	
Comparison of Field Observations and Laboratory Results	No anomalous results between field observations and analysis results were noted.
Data transcription	A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	LORs were sufficiently low to enable assessment against adopted screening levels except for PFOS for NEMP (HEPA, 2020) ecological guideline values for the 99% protection of freshwater species. The potential exists for concentrations of PFOS to be above the adopted guideline, but below the laboratory LOR. This should be taken into consideration when interpreting and using this data quantitatively where results are reported below LOR. LORs in the following samples were raised due to matrix interference: • 0861_SD043_230419 (EB2312057_003) – PFOS • 0861_SW099_230419 (EB2312062_038 and 0861_MW041_230419 (EB2312062-039)- PFHxS and PFOS. • 0861_SW064_230421 (EB2312062-073) – PFPeA. • 0861_SD011_230417 (EB2312062-002). • 0861_MW024_230428 (E2312761-031). • 0861_MW032_230427 (EB2312761-006) – 6:2 FTS. • 0861_MW054S_230426 (EB2312770-001) – PFBS. • 0861_MW054D_230426 (EB2312770-002) – PFOS. The following samples required dilution prior to analysis: • 0861_SD045_230418 (EB2312057-004) due to matrix interference. • 0861_SD067_230402 (EB2312062_060), 0861_SD080_230420 (EB2312062_061) and 0861_SD041_230418 (EB2312062_020) due to high concentrations of contaminants. • 0861_SD050_230511 (EB2314270-008) due to matrix interference.
Field QA/QC RPDs	RPDs for sediment, groundwater and surface water samples are reported in **Tables C3, C4** and **C5** respectively. Field duplicate and triplicate RPDs were reported within control limits for all groundwater, surface water and sediment samples except the following (the sample with the higher concentration is in bold).

	• 0861_SD059_230417 **and 0861_QC107_230417** for PFHxS (102%) and PFOS (120%), • 0861_SD059_230417 **and 0861_QC207_230417** for PFOS (117%) • 0861_SD304_230428 and **0861_QC110_230428** for PFHxS (186%), PFOS (184%) and FOSA (156%) • 0861_SD304_230428 and **0861_QC210_230428** for PFHxS (185%) and PFOS (186%) • **0861_MW050_230417** and 0861_QC200_230417 for PFOS (32%) • **0861_MW057S_230419** and 0861_QC203_230419 for PFOS (49%) • **0861_MW021_230428** and 0861_QC206_230428 for PFBS (47%), PFPeS (55%), PFHxS (48%), PFOS (46%), PFHxA (51%), PFHpA (40%), PFOA (60%) • **0861_SW059_230417** and 0861_QC201_230417 for PFPeS (30%), PFPeA (41%) and PFOA (42%) The RPD non-conformances are likely to be due to lack of mixing of samples, different extraction techniques used by the primary and secondary laboratories and heterogeneity in the solid samples. Therefore, the elevated RPDs are not considered to affect data interpretation for use in this report. The higher concentration has however conservatively been adopted in the report tables. All remaining samples reported within the control limits.
Other	
Other observations	The new exceedance of sum of PFOS and PFHxS in the groundwater sample from MW024 was in a sample which has matrix interferences. The elevated concentrations recorded in the sample from MW024 during the sampling event may be due to the presence of sediment in the sample. PFAS concentrations in SW/SD018 were not consistent compared to historical results and with other sampling locations along Warrill Creek. The concentrations are consistent with a drainage channel location rather than Warrill Creek. Samples SW/SD018 were renamed SW/SD304. No other key observations were identified in the field or laboratory datasets that could have a material implication on data interpretation and therefore decision-making on the project.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.

**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-20 x EQL); 30 (> 20 x EQL))

***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

NC is not calculable

Sampled By: [redacted]
Mobile no. :

Project Name: QLD_0861_PFASOMP [redacted]

AECOM Project #: 60612563 3.1

Purchase Order No: 60612563 3.1

Specifications: Please report in ESdat format

	Yes (tick)
1. Urgent TAT required? (please circle: 24hr 48hr 5 days)	
2. Fast TAT Guarantee Required?	
3. Is any sediment layer present in waters to be excluded from extractions?	
4. % extraneous material removed from samples to be reported as per NEPM 5.1.1?	
5. Special storage requirements? (details: _____)	

6. Report Format: ESdat

7. Project Manager: James Peachey

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 19/05/2023: As per email from [redacted] on 19/05/2023, Project ID changed to QLD_0861_PFASOMP_23.***
- **Please be advised, a sample ID provided on the COC (0861_MW057I_230419) differ from the ID provided on the sample containers (0861_MW057D_230419). ALS will proceed with analysis using the ID provided on the COC.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: The LOR for PFOS for sample '0861_SD043_230419' (EB2312057_003) has been raised due to matrix interference.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: High LCS recoveries deemed acceptable as associated sample analyte results are less then the limit of reporting.
- EP231X PFAS: Sample "0861_SD026_230419"(EB2312057-001) shows poor matrix spike recovery. Confirmed by re-extraction and re-analysis.
- EP231X PFAS: Sample ‘0861_SD045_230418’ (EB2312057-004) required dilution prior to analysis due to matrix interference. LOR values have been adjusted accordingly.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 03/05/2023: As per email from [redacted] on 03/05/2023, Sample Names amended for ALS Sample #'s 005,015,016,023,024, 033,034,037,043,044,054,055, 062,063,067 and 068.***
- ***SRN Reissued 11/05/2023: Request received from [redacted] on 11/05/2023 to split ALS Sample #'s 023-024 & 031-032 onto separate COA.***
- ***SRN Reissued 19/05/2023: As per email from [redacted] on 19/05/2023, Project ID changed to QLD_0861_PFASOMP_23.***
- ***SRN Reissued 22/05/2023: As per email from [redacted], EB2312062_023 Sample Name amended from 0861_QC108_230417 to 0861_QC108_230418.***
- ***23/04/23*: SRN has been resent to acknowledge improved reporting date. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- **Please be advised that extra samples '0861_SW053_230421', '0861_SW064_230421', and '0861_SW079_230421' were received in addition to the samples listed on the COC. These samples have been added to the end of the work order and EP231X analysis has been applied in line with the rest of the samples in the workorder.**
- **Please be advised, some sample IDs provided on the COC (0861_SW027_230417, 0861_SD041_230418, 0861_QC503_230419, 0861_QC603_230419, 0861_SD038_230420, 0861_SD053_230420, 0861_SD079_230420, 0861_SD064_230420, 0861_SD067_230420, 0861_SD080_230420) differ from the ID provided on the sample containers (0861_SD027_230417, 0861_SW041_230418, 0861_QC502_230419, 0861_QC602_230419, 0861_SD038_230421, 0861_SD053_230421, 0861_SD079_230421, 0861_SD064_230421, 0861_SD067_230421, 0861_SD080_230421). ALS will proceed with analysis using the ID provided on the COC. If this is incorrect, or you have any questions, please enquire with Client Services at ALSEnviro.Brisbane@ALSGlobal.com.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).

- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

EB2312062-062 : [21-Apr-2023] : 0861_QC500_230418 - 040617
EB2312062-063 : [21-Apr-2023] : 0861_QC501_230418 - 060425

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order	: **EB2312062-AA**	Page	: 1 of 33
Amendment	: **3**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	: [redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP_23	Date Samples Received	: 21-Apr-2023 14:31
Order number	: 60612563 3.1	Date Analysis Commenced	: 22-Apr-2023
C-O-C number	: ----	Issue Date	: 22-May-2023 16:38
Sampler	: [redacted]		
Site	: BASE		
Quote number	: SY/139/19 v4 60612563_2.1		
No. of samples received	: 70		
No. of samples analysed	: 70		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- EP231X PFAS: The LOR for PFHxS and PFOS for samples '0861_SW099_230419' (EB2312062_038) and '0861_MW041_230419' (EB2312062-039) have been raised due to matrix interference.
- EP231X PFAS: Sample '0861_SD003_230418' (EB2312062_022) shows poor duplicate results due to sample heterogeneity.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 22/05/2023: This report has been amended as a result of misinterpretation of sample identification name for samples EB2312062_023. All analysis results are as per the previous report.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: Samples '0861_SD067_230420' (EB2312062_060) and '0861_SD080_230420' (EB2312062_061) required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. The LOR for PFUnDA has been raised further due to matrix interference.
- EP231X PFAS: Sample '0861_SD041_230418' (EB2312062_020) required dilution due to the presence of high level contaminants. Surrogate recoveries not determined and LOR values have been adjusted accordingly.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. Particular LORs have been raised further due to additional matrix interferences.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of PFPeA for sample "0861_SW064_230421"(EB2312062-073) has been raised due to matrix interference.
- EP231X PFAS: Sample '0861_SD011_230417' (EB2312062-002) shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP231X PFAS: The LORs of particular analytes for particular samples have been raised due to sample matrix interferences.
- Amendment 11/05/2023: This report has been amended following the request to report specific samples EB2312062_023, 024, 031 & 032 on a separate COA, received from James Peachey on 11/05/2023.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Morgan Lennox	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X PFAS: High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- EP231X PFAS: The LOR for PFHxS and PFOS for samples '0861_SW099_230419' (EB2312062_038) and '0861_MW041_230419' (EB2312062-039) have been raised due to matrix interference.
- EP231X PFAS: Sample '0861_SD003_230418' (EB2312062_022) shows poor duplicate results due to sample heterogeneity.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 22/05/2023: This report has been amended as a result of misinterpretation of sample identification name for samples EB2312062_023. All analysis results are as per the previous report.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: Samples '0861_SD067_230420' (EB2312062_060) and '0861_SD080_230420' (EB2312062_061) required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. The LOR for PFUnDA has been raised further due to matrix interference.
- EP231X PFAS: Sample '0861_SD041_230418' (EB2312062_020) required dilution due to the presence of high level contaminants. Surrogate recoveries not determined and LOR values have been adjusted accordingly.
- EP231X PFAS: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly. Particular LORs have been raised further due to additional matrix interferences.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of PFPeA for sample "0861_SW064_230421"(EB2312062-073) has been raised due to matrix interference.
- EP231X PFAS: Sample '0861_SD011_230417' (EB2312062-002) shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP231X PFAS: The LORs of particular analytes for particular samples have been raised due to sample matrix interferences.
- Amendment 11/05/2023: This report has been amended following the request to report specific samples EB2312062_023, 024, 031 & 032 on a separate COA, received from James Peachey on 11/05/2023.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

No. of samples analysed	: 70		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QUALITY CONTROL REPORT

Work Order	: **EB2312062-AB**	Page	: 1 of 11
Amendment	: **3**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	[redacted]
Address	: [redacted]	Address	[redacted]
Telephone	: +[redacted]	Telephone	[redacted]
Project	: QLD_0861_PFASOMP_23	Date Samples Received	: 21-Apr-2023
Order number	: 60612563 3.1	Date Analysis Commenced	: 22-Apr-2023
C-O-C number	: ----	Issue Date	: 22-May-2023
Sampler	: [redacted]		
Site	: BASE		
Quote number	: SY/139/19 v4 60612563_2.1		
No. of samples received	: 4		
No. of samples analysed	: 4		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2312062--022	0861_SD003_230418	**Perfluorooctane sulfonic acid (PFOS)**	1763-23-1	29.9 %	0% - 20%	**RPD exceeds LOR based limits**
Laboratory Control Spike (LCS) Recoveries							
EP231D: (n:2) Fluorotelomer Sulfonic Acids	QC-5009470-002	----	**10:2 Fluorotelomer sulfonic acid (10:2 FTS)**	120226-60-0	129 %	54.8-124%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2312062--002	0861_SD011_230417	**Perfluorooctane sulfonic acid (PFOS)**	1763-23-1	34.8 %	68.0-136%	**Recovery less than lower data quality objective**

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2312062--007	0861_MW048_230417	**Perfluorohexane sulfonic acid (PFHxS)**	355-46-4	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EP231A: Perfluoroalkyl Sulfonic Acids	EB2312062--007	0861_MW048_230417	**Perfluorooctane sulfonic acid (PFOS)**	1763-23-1	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

Outliers : Frequency of Quality Control Samples

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
Method	QC	Regular	Actual	Expected	
	2				
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	56	3.57	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	56	1.79	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 03/05/2023: As per email from [redacted] on 03/05/2023, Sample Names amended for ALS Sample #'s 016-020,024,025,040,050-052. COA Spit for Samples #007,008,011 & 012.***
- ***SRN Reissued 19/05/2023: As per email from [redacted] on 19/05/2023, Project ID changed to QLD_0861_PFASOMP_23.***
- **Please be advised that some samples were not received at the laboratory (denoted SNR on the scanned COC).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Samples '0861_QC205_230426', '0861_QC402_230426', '0861_QC206_230428', and '0861_QC403_230428' have been forwarded to NMI as requested. Please note that this will incur a freight forwarding fee.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

EB2312761-024 : [28-Apr-2023] : 0861_QC502_230426 - 040615
EB2312761-025 : [28-Apr-2023] : 0861_QC503_230426 - 060422

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: Particular samples required dilution due to matrix interferences and the presence of high level contaminants. LOR values have been adjusted accordingly. The LOR values of particular analytes have been further raised due to additional matrix interferences. Surrogate recoveries not determined.
- EP231X PFAS: Sample "0861_SD008_230428"(EB2312761-032) has high moisture content, LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of PFBS for sample '0861_MW024_230428' (EB2312761-031) has been raised due to matrix interference.
- EP231X PFAS: High matrix spike recovery for sample 'EB2312591-084' deemed acceptable as associated sample analyte results are less than the limit of reporting.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR for 6:2 FTS has been raised in sample '0861_MW032_230427' (EB2312761-006) due to matrix interference.
- Amendment (DD/MM/YYYY): This report has been amended following the request to report specific samples (EB2312761) ALS Samples # 007, 008, 011 & 112 on a separate COA, received from [redacted] via email on 03/05/2023.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: Particular samples required dilution due to matrix interferences and the presence of high level contaminants. LOR values have been adjusted accordingly. The LOR values of particular analytes have been further raised due to additional matrix interferences. Surrogate recoveries not determined.
- EP231X PFAS: Sample "0861_SD008_230428"(EB2312761-032) has high moisture content, LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR of PFBS for sample '0861_MW024_230428' (EB2312761-031) has been raised due to matrix interference.
- EP231X PFAS: High matrix spike recovery for sample 'EB2312591-084' deemed acceptable as associated sample analyte results are less than the limit of reporting.
- EP231X PFAS: Whole bottle extraction was not possible for particular samples. Samples required dilution prior to extraction due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP231X PFAS: The LOR for 6:2 FTS has been raised in sample '0861_MW032_230427' (EB2312761-006) due to matrix interference.
- Amendment (DD/MM/YYYY): This report has been amended following the request to report specific samples (EB2312761) ALS Samples # 007, 008, 011 & 112 on a separate COA, received from [redacted] via email on 03/05/2023.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Site	:		
Quote number	: SY/139/19 v4 60612563_2.1		
No. of samples received	: 4		
No. of samples analysed	: 4		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
	Senior Chemist - Organics	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231D: (n:2) Fluorotelomer Sulfonic Acids	EB2312591--084	Anonymous	**10:2 Fluorotelomer sulfonic acid (10:2 FTS)**	120226-60-0	151 %	70.0-130%	**Recovery greater than upper data quality objective**

Outliers : Frequency of Quality Control Samples

Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	38	2.63	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	SOIL	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***SRN Reissued 19/05/2023: As per email from [redacted] on 19/05/2023, Project ID changed to QLD_0861_PFASOMP_23.***
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment 19/05/2023: This report has been amended to alter the project reference code. All analysis results are as per the previous report.
- EP231X PFAS: The LORs of PFBS for sample '0861_MW054S_230426'(EB2312770-001) and PFOS for sample '0861_MW054D_230426' (EB2312770-002) have been raised due to matrix interferences.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Order number	: 60612563 3.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count		Rate (%)		Quality Control Specification
	QC 0	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	14	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	14	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER** Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order	: **EB2314270**	Page	: 1 of 9
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: [redacted]	Contact	[redacted]
Address	: [redacted]	Address	: [redacted]
Telephone	: [redacted]	Telephone	: [redacted]
Project	: QLD_0861_PFASOMP_23	Date Samples Received	: 12-May-2023 11:13
Order number	: 60612563 3.1	Date Analysis Commenced	: 12-May-2023
C-O-C number	: ----	Issue Date	: 19-May-2023 17:49
Sampler	: AECOM		
Site	: ----		
Quote number	: SY/139/19 v4 60612563_2.1		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: Sample '0861_SD050_230511' (EB2314270-008) required dilution prior to analysis due to matrix interference (internal standard suppression). LOR values have been adjusted accordingly.
- EP231X PFAS: High LCS recovery for 10:2 FTS deemed acceptable as associated sample analyte results are less than the LOR.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Analytical Results

Quote number	: SY/139/19 v4 60612563_2.1		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP231D: (n:2) Fluorotelomer Sulfonic Acids	QC-5047744-002	----	**10:2 Fluorotelomer sulfonic acid (10:2 FTS)**	120226-60-0	138 %	64.2-133%	**Recovery greater than upper control limit**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please be advised that for sample point 0861_QC111_230522, the containers submitted came labelled as 0861_QC113_230522. ALS as labelled these containers as per the received chain of custody.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Samples "QC211 and QC212 " has been forwarded to NMI , as requested. Please note that this will incur a freight forwarding fee.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X PFAS: The LOR values of particular analytes have been raised due to the presence of sample matrix interference.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EP231A: Perfluoroalkyl Sulfonic Acids	EB2315514--008	0861_SD047_230522	**Perfluorodecane sulfonic acid (PFDS)**	335-77-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
Method	QC	Regular	Actual	Expected	
	0				
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	17	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	17	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

[redacted]

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

SAMPLE RECEIVED CONDITION

Date samples received: 3-MAY-2023

Sample received in good order: Yes

NMI Quotation no. provided:

Client purchase order number: 60612563_3_1

Temperature of samples: Chilled

Comments:

Mode of Delivery:

Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.

Alterations to Client requirements requested after commencement of testing may incur charges.

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptence of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions

to
N23/008564

PFOS and PFHxS are quantified using a combined branched and linear standard,

REPORT OF ANALYSIS

linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

N23/008174
PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

REPORT OF ANALYSIS

PFOS and PFHxS are quantified using a combined branched and linear standard,
linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

PFOS and PFHxS are quantified using a combined branched and linear standard,

[redacted]

REPORT OF ANALYSIS

linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

PFOS and PFHxS are quantified using a combined branched and linear standard,

REPORT OF ANALYSIS

linear and branched isomers are totalled for reporting.
All results corrected for labelled surrogate recoveries.

Selected PFAS surrogate recoveries are biased due to matrix effects.ô
High PFAS surrogate recoveries accepted - results corrected for recovery.
Surrogate recoveries low for selected analytes - PFAS LORs not raised since S/N >10.

BUMP TEST WITH CALIBRATION SOLUTION

Date and Time:	18/04/2023 0800				
Parameter	Acidity		Conductivity	Dissolved Oxygen	Redox
Units	pH	pH	µS/cm	ppm	mV
Calibration Standard Concentration:	4	7	2760	0	231.4
Bump Test Reading:	4.02	7.02	2686	0	232.3
Bump Test Temperature:	17.2	17.1	17.2	17.2	17.2

COMMENTS

Detail any equipment faults, minor maintenance performed, change of batteries or technical support provided.

Approval and Distribution

☐ Each individual instrument has been inspected and calibrated daily and bump tested as required by fieldwork staff.

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PFAS OMP	**Project Number:**	60612563
Project Location:	AACO	**Client:**	DOD
PM Name:	[redacted]	**Fieldwork Staff Name:**	[redacted]

This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.

INSTRUMENT DETAILS

Supplier:	Air-met
Make and Model:	YSI Pro Quatro
Serial Number:	10H100314

CALIBRATION

CALIBRATE WITH CALIBRATION SOLUTIONS

Date and Time:					
Parameter	Acidity		Conductivity	Dissolved Oxygen	Redox
Units	pH	pH	µS/cm	ppm	mV
Calibration Standard Concentration:					
Calibration Reading:					
Calibration Temperature:
