## 1.0 Introduction

### 1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Program at the RAAF Base Williamtown (the 'Site') and the Williamtown Management Area in the NSW & JBT Region. The location of the Site and Management Area is shown in **Figure F1** in **Appendix A**.

The Ongoing Monitoring Plan (OMP) (AECOM, 2019) outlines the sampling requirements for the Site and off-Site areas within the Management Area.

Following each sampling event, factual sampling event reports will be prepared. Annual interpretative reports will be prepared following the completion of each 12-month sampling period. This sampling event factual report has been prepared to report the results of the November 2021 biannual sampling event, specifically highlighting first time detections and/or first-time exceedances of human health and ecological screening criteria for PFOS+PFHxS and/or PFOA.

This report has been prepared in accordance with the Defence (2021) *PFAS OMP Factual Report Guidance* Version 2.0 issued in May 2021 (Defence, 2021).

### 1.2 Objectives

The objectives of the Ongoing Monitoring Program are to:

- Implement the Ongoing Monitoring Plan prepared as part of the Detailed Environmental Investigations; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, transport, and transformation of PFAS at each property.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PFAS Management Area Plan (PMAP).

The objective of this phase of works was to implement the scope of works for the November 2021 biannual sampling event in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2021).

## 2.0 Scope of Work

The scope of works for this sampling event included:

- Obtaining access to private properties where selected groundwater, surface water and sediment sampling locations are situated;
- Gauging of groundwater levels in monitoring wells prior to collection of samples;
- Groundwater sampling and collection of water quality parameters at 102 monitoring wells and bores (see **Table 1** below and **Figure F1** in **Appendix A**). It is noted that samples from eight locations could not be collected during this sampling event, refer to **Table 10** for more details;
- Surface water sampling and collection of water quality parameters at 23 locations, see **Table 2** below and **Figure F1** in **Appendix A**. It is noted that samples from two surface water locations could not be collected during this sampling event, refer to **Table 10** for more details;
- Sediment sampling at 26 locations, see **Table 3** below and **Figure F1** in **Appendix A**. It is noted that samples from two sediment locations could not be collected during this sampling event, refer to **Table 10** for more details;
- Soil sampling at 12 locations, see **Table 4** below and **Figure F2** in **Appendix A**;
- Collecting of field duplicate samples at a rate of 1 in 10 primary samples and collecting one rinsate sample per fieldwork day;
- Analysis of samples for PFAS suite at the standard limit of reporting (LOR);
- Data management of the OMP field and laboratory data in Defence ESdat database;
- Preparation of this factual monitoring event report;

**Table 1 Groundwater Sampling Locations**

Area	Description	Sampling Location
On-Site	<b>Former &amp; Current Fire Station</b> (Facility 165)	MW196, MW198, MW202S, MW202D
	<b>Disused Fire Training Pit</b> (Facility 479)	MW166, MW167, MW168, MW169S, MW169D
	<b>Former DEMS Landfill</b> (Facility 394)	MW172, MW282S, MW280D, MW281S
	<b>Ordnance Loading Area</b>	MW244S, MW244D
	<b>Lake Cochran</b>	MW108S, MW108D, MW109D, MW175D, MW179S, MW179D, MW466, MW468
	<b>Northeast Landfill</b>	MW156D, MW209S, MW209D, MW433
	<b>Trade Waste Treatment Plant</b> (Facility 480)	MW106S, MW106D, MW208, MW212
	<b>HWC Pump Station 7</b>	MW134I, MW134D, MW814*
East of Site	<b>Pump Station 9</b> Eastern flank of PFAS plume	MW130S, MW130D, MW132S, MW132D, MW160, MW826*, MW829, MW318S, MW318D
	<b>Moors Drain</b> Eastern flank of PFAS plume	MW121, MW122*, MW162S, MW162D, MW247S, MW247D
West of Site	<b>Existing Monitoring Wells</b> West of PFAS plume	MW107S, MW107D, MW241S, MW214D, MW315S*, MW315D*
Southern Area	<b>Existing Monitoring Wells &amp; Bores</b> Southern portion of PFAS plume	MW146S, MW146A_D, MW177*, MW271S, MW271D, MW278S, MW278D

Area	Description	Sampling Location
<b>Cabbage Tree Road Area</b>	<b>Existing Monitoring Wells &amp; Bores</b> Southern portion of PFAS plume	MW124, MW125S, MW125D, MW126S, MW126D, MW139*, MW178, MW230S*, MW236S, MW236D, MW238S, MW238D
<b>Lavis Lane Area</b>	<b>Monitoring Wells</b> Southern edge of PFAS plume	MW128S, MW128D, MW163, MW279S, MW316D
<b>Salt Ash Area</b>	<b>Existing Monitoring Wells &amp; Bores</b> Eastern portion of PFAS plume	MW118, MW123, MW256S, MW256D, MW257S, MW257D, MW258S, MW258D, MW260S, MW260D, MW263S, MW263D
<b>Fullerton Cove Area</b>	<b>Existing Monitoring Wells &amp; Bores</b> Southern edge of PFAS plume	MW231D, MW231S, MW232S, MW232D, MW235S, MW235D, MW266S, MW266D, MW267S, MW267D

**Notes:**

\* Location not sampled. Refer to **Table 10** for further details.

**Table 2 Surface Water Monitoring Locations**

<b>Fullerton Cove Ring Drain</b>	SD259
<b>Fullerton Cove (tidal gate outlet)</b>	SD254, SD255, SD326
<b>Tilligerry Creek</b>	SD019, SD023, SD024, SD079

**Notes:**

\* Location not sampled. Refer to **Table 10** for further details.

**Table 4 Soil Sampling Locations**

Area	Sampling Location	Number of locations
<b>Flood Areas</b>	2 per flood area	SS101, SS102, SS103, SS104, SS105, SS106, SS107, SS108, SS109, SS110, SS111, SS112

**Notes:**

Soil samples were collected from the designated flood areas outlined in the OMP (AECOM, 2019)

### 3.0 Deviations from the SAQP

The November 2021 sampling event was completed in general accordance with the SAQP (AECOM, 2021) with the exception of the deviations outlined in **Table 5** below.

**Table 5** Deviations from SAQP (AECOM, 2021)

SAQP	November 2021 Sampling Event
102 groundwater locations are identified to be sampled as part of the biannual sampling event	<p>Monitoring wells MW315D, MW315S and MW814 were not sampled due to access to the locations being flooded.</p> <p>Monitoring well MW177 was not sampled due to dense vegetation blocking the access track on Port Stephens Council Land.</p> <p>Monitoring wells MW139 and MW230S were not sampled as contact could not be made with the property owners.</p> <p>Monitoring well MW122 was not sampled as the well could not be located. The well was likely buried beneath soil or gravel observed in the area.</p> <p>Monitoring well MW826 was not sampled as the well could not be located. The well was likely buried beneath the sand observed in the area. Note that AECOM attempted to locate this well on two separate occasions using a metal detector.</p> <p>AECOM will attempt to access and sample these locations during the upcoming sampling event in May 2022.</p>
23 surface water locations are identified to be sampled as part of the biannual sampling event	<p>AECOM was unable collect a sample from proposed surface water locations SW011 (due to access to the location being flooded) and SW072 (as contact could not be made with the property owner).</p> <p>AECOM will attempt to collect a sample from the location again during the next scheduled OMP sampling event in May 2022.</p>
26 sediment locations are identified to be sampled as part of the biannual sampling event	<p>AECOM was unable collect a sample from proposed sediment locations SD011 (due to access to the locations being flooded) and from SD072 (as contact could not be made with the property owner).</p> <p>AECOM will attempt to collect a sample from the location again during the next scheduled OMP sampling event in May 2022.</p>

## 4.0 Methodology

### 4.1 Sampling Methodology

The methodology used for the biannual November 2021 sampling event was in accordance with the SAQP (AECOM, 2021) and is summarised in **Table 6** below.

**Table 6 Sampling Methodology**

Item	Details
Groundwater gauging	<p>The depth to groundwater was measured in each monitoring well immediately prior to collection of groundwater samples using an interface probe.</p> <p>In addition, a targeted gauging round was completed of 30 selected monitoring wells to generate data for the groundwater elevation contours and assess groundwater flow direction. The targeted gauging round was completed on 23 November 2021.</p>
Field parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for all groundwater and surface water samples.</p> <p>Calibration records for the field equipment are presented in <b>Appendix C</b>.</p>
Sampling methodology	<p><b>Groundwater Monitoring Wells</b></p> <p>Groundwater samples were collected from all monitoring wells using no-purge methodology HydraSleeves™.</p> <p>HydraSleeves™ were installed within the screened interval of the wells for a minimum of 24 hours prior to the sampling round. This was based on a review of the well construction log. Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in preparation for the next sampling round.</p> <p><b>Residential Bores</b></p> <p>Bore water samples were collected by placing a laboratory provided sample bottle beneath the tap outlet to collect the “first flush” of water.</p> <p><b>Surface Water</b></p> <p>Surface water samples were collected from immediately below the water surface (approximately 10 centimetres [cm] below the surface water level, where depth permitted) to minimise collection of sediment, surface film or floating materials in the samples.</p> <p>At each location, a new, laboratory supplied container was lowered into the water (either by hand or using a sampling pole) with the cap immediately applied once the container was full.</p> <p><b>Sediment</b></p> <p>Sediment samples were collected from within the water body where possible using a trowel decontaminated between each location or gloved hand and placed directly into a new laboratory supplied container.</p> <p><b>Soil</b></p> <p>Soil samples were collected from the top 0.1 m at each location using a trowel and placing the sample directly into a new laboratory supplied container. The trowel was decontaminated between each location.</p>

Item	Details
Sample analysis	<p>The samples were submitted to the primary and secondary laboratories for analysis detailed in <b>Section 2.0</b>.</p> <p>ALS Environmental (ALS) Sydney, NSW was used as the primary laboratory. Envirolab Services Pty Ltd (Envirolab) Sydney, NSW was used as the secondary laboratory. ALS and Envirolab methods for analyses were certified by the National Association of Testing Authorities (NATA).</p> <p>Laboratory Certificates are presented in <b>Appendix E</b>.</p>
QA/QC Samples	<p>A QA/QC program was implemented for the sampling and analysis program in order to obtain representative data and assess the reliability of the data obtained.</p> <p>To facilitate the QA/QC program the following sample types were obtained during the sampling program:</p> <ul style="list-style-type: none"> <li>• <i>Primary duplicates</i> collected at a rate of a rate of one per 10 primary samples. The relative percentage difference (RPD) should be less than 30%.</li> <li>• <i>Secondary duplicates</i> collected at a rate of one per 10 primary samples. The RPD should be less than 30%.</li> <li>• <i>Rinsate blanks</i> collected at a frequency of one per set of sampling equipment per day where equipment was reused between locations. Analytical results should be below the laboratory limit of reporting (LOR).</li> </ul> <p>For this biannual November 2021 sampling event, the following QA/QC samples were collected:</p> <ul style="list-style-type: none"> <li>• 12 water duplicates (intra-lab) which exceeded the Data Quality Indicator (DQI) of one per 10 primary samples,</li> <li>• 12 water triplicates (inter-lab) which exceeded the DQI of one per 10 primary samples;</li> <li>• 4 soil/sediment duplicate (intra-lab) which exceeded the DQI of one per 10 primary samples;</li> <li>• 4 soil/sediment triplicate (inter-lab) which exceeded the DQI of one per 10 primary samples; and</li> <li>• 12 rinsate blanks which met the DQI of one per day of sampling where sampling equipment was reused between locations.</li> </ul> <p>The Analytical Data Validation is presented in <b>Appendix D</b>.</p>

## 4.2 Adopted Screening Criteria

Adopted screening criteria references national guidance in the form of the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the data set include the following:

- PFAS National Environmental Management Plan 2.0 (NEMP), (HEPA 2020) <https://www.environment.gov.au/system/files/resources/2fadf1bc-b0b6-44cb-a192-78c522d5ec3f/files/pfas-nemp-2.pdf>
- Department of Health (DoH), 2017. Health Based Guidance Values for PFAS for use in site investigations in Australia. April 2017 (FSANZ 2017).
- National Health and Medical Research Council (NHMRC), 2019. Guidance on PFAS in Recreational Water. August 2019 (NHMRC 2019).
- National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM).

The adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in **Table 7** and **Table 8** below.

**Table 7 PFAS Screening Criteria: Water**

Pathway	Compound	Criteria	Comment/Reference
<b>Human Health Receptors</b>			
Drinking water - groundwater	PFOS + PFHxS	0.07 µg/L	The values presented in the PFAS NEMP (2020) are from the Department of Health (DoH) (2017), which published final health-based guidance values for PFAS for use in site investigations in Australia. DoH utilised the Tolerable Daily Intake (TDI) for PFOS and PFOA from Food Standards Australia New Zealand (FSANZ) [2017] and the methodology described in Chapter 6.3.3 of the National Health and Medical Research Council's (NHMRC) of the Australian Drinking Water Guidelines (ADWG, 2022) to determine drinking water values.  For PFHxS, DoH (2017) noted that ' <i>FSANZ concluded that there was not enough toxicological and epidemiological information to justify establishing a tolerable daily intake. However, as a precaution, and for the purposes of site investigations, the PFOS tolerable daily intake should apply to PFHxS. In practice, this means that the level of PFHxS exposure should be added to the level of PFOS exposure; and this combined level be compared to the tolerable daily intake for PFOS. All surface water and groundwater results were compared to these criteria.</i>
	PFOA	0.56 µg/L	
Recreational use – surface water	PFOS + PFHxS	2 µg/L	In August 2019, NHMRC released guidance on the assessment of PFAS in surface water. Rather than adopting an ingestion rate of 0.2 L of water per day (as per the ADWG formula), NHMRC adjusted this rate with consideration of an event frequency (150 events/year) to calculate an annual ingestion rate of 30 L per year.
	PFOA	10 µg/L	
<b>Ecological Receptors</b>			
Freshwater (99% species protection values)	PFOS	0.00023 µg/L	The values are from the PFAS NEMP (2020) which endorsed the Australian and New Zealand Guidelines for Fresh and Marine Water Quality – draft default guideline values. AECOM understands that these guidelines are currently being reviewed and will consider the appropriateness of considering any future revision.  The 99% level of protection has been applied for slightly to moderately disturbed ecosystems. This approach is generally adopted for chemicals that bioaccumulate and biomagnify in wildlife. It is proposed that the laboratory LOR is adopted for the purposes of preliminary screening of analytical water results, rather than sole use of the criteria value.
	PFOA	19 µg/L	

Table 8 PFAS Screening Criteria: Soil

Media	Pathway	Compound	Criteria	Comment/Reference
<b>Human Receptors</b>				
Soil	Commercial/ Industrial	PFOS + PFHxS	20 mg/kg	<p>The values presented in the PFAS NEMP (2020) are based on 20% of FSANZ TDI, i.e. up to 80% of exposure is assumed to come from other pathways.</p> <p>The assumptions utilised in the derivation of the criteria in terms of exposure are adopted from the NEPM (2013) Health Investigation Level D. The values make several assumptions including 8 hrs spent indoors and 1 hr spent outdoors at a site such as a shop, office, factory or industrial site.</p> <p>The PFAS NEMP (2020) notes these soil guidance values should only be used to assess potential human exposure through direct soil contact, with simultaneous investigation of other factors including leaching, off-Site transport, bioaccumulation and secondary exposure. Further, the degree of conservatism in the soil criteria means that exceeding these values does not necessarily indicate an unacceptable risk to human health, provided other exposure pathways are controlled.</p> <p><i>Soil results were compared to these criteria (based on exposure scenario).</i></p>
		PFOA	50 mg/kg	
	Public Open Space	PFOS + PFHxS	1 mg/kg	
		PFOA	10 mg/kg	
	Residential with garden/ accessible soil	PFOS + PFHxS	0.01 mg/kg	
		PFOA	0.1 mg/kg	
<b>Ecological Receptors</b>				
Soil	Interim soil – ecological indirect exposure (Residential)	PFOS	0.01 mg/kg	<p>The values are presented in the PFAS NEMP (2020) which published interim guidance values for ecological receptors, for use in site investigations. The values were adopted from Canadian Federal Environmental Quality Guidelines (2017) for Commercial and Industrial use (coarse soil). The values are assumed to protect against potential impacts on freshwater life from PFOS originating from soil that may enter surface water and groundwater.</p> <p>The values are considered for interim use noting further research is required to review and amend (if necessary) these values for Australian conditions.</p> <p><i>All soil results collected from off-Site areas were compared against the Public Open Space and the Residential criteria.</i></p>
		PFOA	-	
	Interim soil ecological – direct exposure (Public Open Space)	PFOS	1 mg/kg	<p>Additional research is required to assess ecological direct exposure criteria currently proposed by Australian research and industry organisations. The PFAS NEMP (2020) recommends the human health screening values proposed for Public Open Space are adopted in the interim.</p> <p><i>All soil results collected from off-Site areas were compared to these criteria.</i></p>
		PFOA	10 mg/kg	

### 4.3 Data Quality Objectives and Data Validation

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2021). Data validation assessment is provided in **Appendix D**.

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report (refer to **Appendix D**).

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements.

## 5.0 Field Observations and Results

### 5.1 General Field Observations

Field observations recorded during the November 2021 sampling event are summarised in **Table 9** below.

**Table 9** General Field Observations

Items	Observations
Weather Conditions	<p>The weather in general was observed to be overcast with light to heavy precipitation and cool to moderate temperature with a maximum daily temperature of 30.7°C recorded on Friday, 12 November 2021.</p> <p>176.6 mm of rainfall was recorded between 8 and 26 November 2021 at RAAF Base Williamtown (Williamtown RAAF NSW, 061078) (Bureau of Meteorology, 2021).</p>
Estate Management Works or Training Activities	No notable estate works or training activities were observed in the vicinity of the sampling locations.

### 5.2 Field Observations and Measurements

The observations and measurements recorded during the field activities for the biannual November 2021 sampling event are summarised in **Table 10**, below.

**Table 10** Field Observations and Measurements

Item	Description
Fieldwork Dates	The biannual November 2021 sampling event was completed between 8 and 26 November 2021. The results are summarised in following sections.
Access and Sample Collection	All sample locations were accessible or were able to be sampled with the exception of those identified in Table 5.
Monitoring Well Network Condition	<p>The following repairs to monitoring wells was undertaken on 21 November 2021:</p> <ul style="list-style-type: none"> <li>MW245S – the damaged monument was replaced and secured.</li> </ul> <p>Additionally, eight of the wells were observed to have flooded gatics, either above or below TOC (MW231D, MW235D, MW236S, MW238S, MW266S, MW266D, MW271S and MW271D). Given that concentrations of PFAS were reported within the historical range for these locations, it is considered unlikely that these wells have been compromised, and that the results can be relied upon for the purposes of the OMP.</p>
Water Contamination Observations	<p>No visible indications of contamination were observed in groundwater and surface water during the sampling.</p> <p>Sulphurous like odours were noted at 11 groundwater locations and one surface water location. Organic, putrefied and septic like odours were noted at nine groundwater locations, while a metallic odour was noted at one groundwater location.</p>

Item	Description
Depth to Groundwater and Flow Direction	<p>Depth to groundwater ranged from 0.0 (MW107S, MW231D, MW235D, MW266S, MW266D and MW271D) and 2.362 (MW130S) metres below top of casing (mbTOC).</p> <p>Groundwater elevations in the aquifer ranged between -0.022 (MW128S and MW235S) and 8.462 (MW244D) metres Australian Height Datum (mAHD). Groundwater gauging data is presented in <b>Table T1</b> in <b>Appendix B</b>.</p> <p>The inferred local groundwater flow direction is south and south east, which was generally consistent with previous flow directions (refer to <b>Figure F3</b> and <b>Figure F4</b> in <b>Appendix A</b>).</p>
Geochemical Parameters	<p>Groundwater and surface water geochemical parameters were measured prior to collecting groundwater samples. The parameters are presented in <b>Table T2</b> and <b>Table T3</b> in <b>Appendix B</b>, and are summarised below:</p> <p><b>Groundwater Geochemical Parameters</b></p> <ul style="list-style-type: none"> <li>• Dissolved oxygen ranged from 0.36 mg/L (MW1006S) to 4.89 mg/L (MW167) indicating poor to well oxygenated conditions.</li> <li>• Electrical conductivity ranged from 37 µS/cm (MW202D) to 40,466 µS/cm (MW266D) indicating fresh to saline conditions.</li> <li>• pH ranged from 4.1 (MW236S) to 7.98 (POT382) indicating moderately acidic to near neutral conditions.</li> <li>• Redox ranged from -11 mV (MW125D) to 372.9 mV (MW168) indicating oxidising to reducing conditions.</li> </ul> <p><b>Surface Water Geochemical Parameters</b></p> <ul style="list-style-type: none"> <li>• Dissolved oxygen ranged from 0.4 mg/L (SW081) to 38.3 mg/L (SW060) indicating relatively poorly to well oxygenated conditions.</li> <li>• Electrical conductivity ranged from 87.5 µS/cm (SW048) to 6,332 µS/cm (SW024) indicating fresh to brackish conditions.</li> <li>• pH ranged from 5.61 (SW048) to 8.02 (SW019) indicating acidic to neutral conditions.</li> <li>• Redox ranged from 168 mV (SW081) to 377.8 mV (SW048) indicating oxidising conditions.</li> </ul>
Soil and Sediment Observations	<p>Soils and sediments sampled and logged during this monitoring event comprised of sand, silt and clay materials with minor inclusions of gravels and trace shell fragments, and varying amounts of organic material (roots, leaves, grass). No anthropogenic inclusions were noted.</p> <p>No staining was observed. Organic odour was noted only at 1 location.</p> <p>Refer to in <b>Table T4</b> in <b>Appendix B</b> for a summary of soil and sediment classifications and observations.</p>

## 5.3 Summary of Analytical Results

### 5.3.1 Groundwater Analytical Results

The PFAS groundwater analytical results from this sampling event are presented in **Table T5** in **Appendix B**. In summary:

- PFAS compounds were reported at concentrations above the laboratory LOR in 50 of the 95 primary groundwater samples analysed.

- Concentrations of PFOS+PFHxS and/or PFOA exceeded the adopted human health criteria in 37 of the primary groundwater samples analysed.
- Concentrations of PFOS and/or PFOA exceeded the adopted ecological screening criteria in 44 of the primary groundwater samples analysed.

Deviations from the historical dataset are reported in **Table 11** and graphically on **Figure F5** in **Appendix A**.

**Table 11 Deviations from Historical Dataset: Groundwater**

Deviation Type	Monitoring wells/bores	Sum of PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Nov 2021	Previous maximum	Nov 2021	Previous maximum	Nov 2021	Previous maximum
First time detections of PFOS+PFHxS and/or PFOA in groundwater	MW130S	0.01	<LOR	<LOR	<LOR	<LOR	<LOR
	MW130D	0.01	<LOR	<LOR	<LOR	<LOR	<LOR
	MW146S	0.01	<LOR	<LOR	<LOR	0.01	<LOR
	MW318S	0.01	<LOR	<LOR	<LOR	0.01	<LOR
	MW318D	<b>0.55</b>	<b>0.37</b>	<b>0.02</b>	<LOR	0.03	<LOR
First time exceedance of the adopted Human Health Screening Criteria	No first time exceedances of the adopted Human Health screening criteria were reported in the data set.						
First time exceedance of the adopted Ecological Screening Criteria	MW146S	0.01	<LOR	<LOR	<LOR	0.01	<LOR
	MW271S	0.02	0.03	<LOR	<LOR	0.01	<LOR
	MW318S	0.01	<LOR	<LOR	<LOR	0.01	<LOR
	MW318D	<b>0.55</b>	<b>0.37</b>	<b>0.02</b>	<LOR	0.03	<LOR
<b>Legend</b>							
<b>Bold</b>	Bold text indicates existing detection or exceedance of NEMP Human Health Screening Criteria						
<b>Blue shading</b>	Blue shading indicates sampling location with first time detection of PFOS+PFHxS, PFOS and/or PFOA						
<b>Yellow Shading</b>	Yellow shading indicates sampling location with first time exceedance of NEMP Human Health Screening criteria						
<b>Purple shading</b>	Purple shading indicates sampling location with first time exceedance of NEMP (2020) Ecological Screening Criteria						

### 5.3.2 Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T6** in **Appendix B**.

In summary, PFAS compounds were reported at concentrations above the laboratory LOR in 20 of the 21 primary surface water samples analysed. Concentrations of PFOS+PFHxS and/or PFOA exceeded the adopted human health criteria in 11 of the primary groundwater samples analysed. Concentrations of PFOS and/or PFOA exceeded the adopted ecological screening criteria in 20 of the primary surface water samples analysed.

There were no first-time detections, or first time exceedances of the adopted human health or ecological screening criteria for PFOS+PFHxS and/or PFOA, in the surface water samples analysed.

### 5.3.3 Sediment Analytical Results

The PFAS sediment analytical results from this sampling event are presented in **Table T7** in **Appendix B**.

In summary, PFAS compounds were reported at concentrations above the laboratory LOR in 24 of the 24 primary sediment samples analysed.

There were no first-time detections for PFOS+PFHxS and/or PFOA, in the sediment samples analysed.

#### **5.3.4 Soil Analytical Results**

The PFAS soil analytical results from this sampling event are presented in **Table T8** in **Appendix B**.

In summary, PFAS compounds were reported at concentrations above the laboratory LOR in 11 of the 12 primary soil samples analysed.

There were no first-time detections, or first-time exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA, in the soil samples analysed.

### **5.4 Historical Sampling Data**

Historical groundwater, surface water, sediment and soil sampling data are presented in **Tables T9, T10, T11** and **T12** (respectively) in **Appendix B**.

## 6.0 Summary and Next Sampling Events

### 6.1 Summary of Monitoring Event

The biannual monitoring event was completed at the Site, publicly accessible land and private properties within the Management Area between 8 November 2021 and 26 November 2021.

The findings of the biannual November 2021 sampling event and the recommended actions are summarised in **Table 12** below.

**Table 12 Summary of Sampling Event**

Item	Comment	Recommended Action
Access to sample locations	<p>The following were accessed and able to be sampled:</p> <ul style="list-style-type: none"> <li>• 95 monitoring wells and bores.</li> <li>• 21 surface water locations.</li> <li>• 24 sediment locations.</li> <li>• 12 soil locations.</li> </ul>	Nil
Inaccessible locations	<p>Groundwater sample from two monitoring wells (MW315S/D and MW814), one surface water (SW011) and one sediment (SD011) were not collected as access to the locations was flooded.</p>	AECOM will continue to monitor these sampling locations during the upcoming sampling event (May 2022).
	<p>Groundwater samples from one monitoring well (MW177) was not collected as the well was inaccessible due to dense vegetation blocking the access track on Port Stephens Council land.</p>	AECOM will contact Port Stephens Council to request the access track be cleared before the upcoming May 2022 sampling event.
	<p>Groundwater samples from two monitoring locations (MW139 and MW230S) and one surface water/sediment location (SW072/SD072) were not collected as the stakeholder could not be contacted to arrange appointment.</p>	AECOM will attempt to contact stakeholder and conduct sampling at this location during the upcoming sampling event (May 2022).

Item	Comment	Recommended Action
	<p>The following wells were not sampled as they were not located this round:</p> <ul style="list-style-type: none"> <li>• MW122</li> <li>• MW826</li> </ul> <p>MW122 was likely buried beneath soil / gravel observed in the area. This is considered a critical location east of the Base as it has recorded detects of PFAS previously.</p> <p>MW826 was noted to be buried under sand. This is considered to be a critical location east of the Base as it has recorded detects of PFAS previously. The well is known to be adjacent to Hunter Water Pumping Station infrastructure. Two attempts were made to locate the monitoring well with a metal detector however the monitoring well could not be located.</p>	<p>AECOM will attempt to locate, access and sample these locations during the upcoming May 2022 sampling event.</p> <p>AECOM will engage a surveyor to assist in locating MW122 and MW826 the monitoring wells during the upcoming May 2022 sampling event.</p>
First time detections of PFOS+PFHxS and/or PFOA	Five monitoring wells MW130S, MW130D, MW146S, MW318S and MW318D reported first time detections of PFOS+PFHxS and/or PFOA.	Locations will be sampled again during the May 2022 sampling event.
First time exceedance of Human Health Screening Criteria	No first time exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA were identified in the samples analysed.	Locations will be sampled again during the May 2022 sampling event.
First time exceedance of ecological Screening Criteria	Four monitoring wells MW146, MW271S, MW318S and MW318D reported first time exceedances of the adopted ecological screening criteria for PFOS.	Locations will be sampled again during the May 2022 sampling event.

## 6.2 Upcoming Sampling Events

The next OMP sampling events are scheduled for February 2022 (biota sampling) and May 2022 (comprehensive groundwater, surface water, sediment and soil sampling).

## 6.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled to be delivered in Q3 2022.

Location Code	Alternative Name	Easting	Northing	Sampled Date Time	Location Comments	Sample Comment	Field Measurements					
							Dissolved Oxygen mg/L	Temperature °C	Electrical Conductivity µS/cm	pH pH_Units	Redox Potential Er mV	Redox Potential Eh (Corrected) mV
SW001	MD1			19/11/2021 14:49	Drainage channel. Weeds and grasses in drain. Waterbody width (approx.): 2.0 m, banks up to 4.0 m. Waterbody depth (approx.): 1.0 m. Water flow observed.	Clear, low turbidity, no odour, no sheen.	4.83	22.5	162	6.19	95.5	301.3
SW005	MD5			17/11/2021 14:53	Drainage channel with concrete outlet. Grasses and trees along banks. Waterbody width (approx.): 5.0 m. Waterbody depth (approx.): 0.2 m. Water flow observed.	Yellow, low turbidity, no odour, no sheen.	4.3	21.1	457.8	6.31	89.4	295.2
SW006	MD6			17/11/2021 13:27	Drainage channel. Waterbody width (approx.): 3.0 m. Waterbody depth (approx.): 1.0 m.	Yellow, low turbidity, no odour, no sheen.	5.49	23.8	183.1	7.93	80.1	285.9
SW007	MD7			16/11/2021 15:40	Drainage channel. Grasses in drain and bushes along banks. Waterbody width (approx.): 2.0 m. Waterbody depth (approx.): 0.3 m. No water flow observed.	Clear, low turbidity, no odour, no sheen.	3.85	21.8	133.2	6.81	109.6	315.4
SW009	MD8			17/11/2021 13:43	Drainage channel. Aquatic vegetation present. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): 0.5 m.	Clear, no turbidity, no odour, no sheen.	3.49	26.7	180	6.21	106	311.8
SW011	MD10			n/a	Not accessible, pathway flooded.	n/a	n/a	n/a	n/a	n/a	n/a	n/a
SW014	MD14			17/11/2021 14:24	Drainage channel with concrete outlet. Trees along banks; aquatic vegetation and suspended organic material present. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): 0.5 to 1.0 m. Water flow observed.	Clear, low turbidity, no odour, no sheen.	4.74	23.1	170.8	6.21	79.4	285.2
SW019	TC12			12/11/2021 12:16	Creek. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): 2.0 m. Water flow observed.	Light brown, medium turbidity, no odour, no sheen.	4.27	25.8	744	8.02	9	214.8
SW023	TC6A			17/11/2021 15:49	Creek / Drainage channel. Grass and trees along banks. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): 0.4 m. Water flow observed.	Brown, low turbidity, no odour, no sheen.	3.91	23.7	799	7.17	43.6	249.4
SW024	TC7			17/11/2021 15:18	Creek / Drainage channel with concrete outlets. Trees and reeds on one side of bank and grass on the other. Waterbody width (approx.): 8.0 to 9.0 m. Waterbody depth (approx.): 1.0 to 2.0 m. Water flow observed. Some brown suspended organic material. Sample taken near autosampler.	Brown, high turbidity, sulfurous odour, no sheen.	4.07	23.2	6332	6.85	95.7	301.5
SW047	BD03			16/11/2021 13:20	Drainage channel. Dense vegetation along banks; aquatic plants and suspended algal growth present. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): 2.0 m. Water flow observed.	Yellow, low turbidity, no odour, no sheen.	3.59	20.4	132	5.97	93.5	299.3
SW048	BD04			16/11/2021 13:01	Drainage channel. Reeds and grasses in drain. Waterbody width (approx.): 5.0 m. Waterbody depth (approx.): 0.3 m. No water flow observed.	Light brown, low turbidity, no odour, no sheen.	6.85	25.1	87.5	5.61	172	377.8
SW055	DD1			16/11/2021 12:34	Concrete drainage channel. Waterbody width (approx.): 3.5 m. Waterbody depth (approx.): 0.3 m. Water flow observed.	Yellow, no turbidity, no odour, no sheen.	4.98	18.7	89.2	6.18	62	267.8
SW059	DD2			15/11/2021 11:47	Drainage channel. Vegetation along banks. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): >1.0 m.	Yellow, low turbidity, no odour, no sheen.	2.69	18.8	151.5	6.11	137	342.8
SW060	DD3			15/11/2021 12:24	Drainage channel. Vegetation along banks. Waterbody width (approx.): 4.0 m. Waterbody depth (approx.): >1.0 m.	Light brown, low turbidity, no odour, biosheen.	38.3	20.3	164.7	6.09	120.4	326.2
SW062	DD5			17/11/2021 12:05	Concrete drainage channel. Waterbody width (approx.): 6.0 m. Waterbody depth (approx.): 0.6 m.	Light brown, medium turbidity, no odour, biosheen.	2.67	23.7	857	7.06	47.6	253.4
SW072	FFD4			n/a	Not accessible, unable to secure appointment with property owner.	n/a	n/a	n/a	n/a	n/a	n/a	n/a
SW079	TC2			12/11/2021 15:00	Creek. Waterbody width (approx.): 3.0 m. Waterbody depth (approx.): 1.5 m.	Yellow, low turbidity, no odour, no sheen.	2.91	24.7	796	6.64	73.5	279.3
SW081	TFD1			30/11/2021 16:30	Drainage channel with concrete outlet. Reeds in water and along banks; algal growth and biosheen on water surface. Waterbody width (approx.): 1.0 to 3.0 m at different points. Waterbody depth (approx.): 0.5 to 1.0 m.	Brown, high turbidity, no odour, biosheen.	0.4	18.7	742	6.69	-37.8	168
SW082	TFD2			19/11/2021 12:23	Drainage channel in front of concrete outlets. Grass along banks. Waterbody width (approx.): 8.0 m. Waterbody depth (approx.): > 2.0 m. Water flow observed.	Yellow, low turbidity, no odour, no sheen.	3.49	23.5	1272	7.13	39.7	245.5
SW108	LC			16/11/2021 14:06	Lake Cochran. Vegetation along banks. Waterbody width (approx.): 250 x 150 m. Waterbody depth (approx.): >2 m. No water flow observed.	Yellow, low turbidity, no odour, no sheen.	4.88	24.6	100.2	6.63	34.5	240.3
SW110	LC_B			16/11/2021 12:16	Lake Cochran. Vegetation along banks. Waterbody width (approx.): 250 x 150 m. Waterbody depth (approx.): >2 m. Water flow observed. Sample collected upstream of filtration system.	Yellow, low turbidity, no odour, no sheen.	6.04	21.2	92.1	6.67	33.6	239.4
SW259	FCD4			26/11/2021 8:15	Drainage channel. Waterbody width (approx.): 3.0 to 4.0 m. Waterbody depth (approx.): 2.0 m.	Yellow, low turbidity, no odour, no sheen.	2.52	20.6	1869	7.05	126	331.8

- Notes
- LOR Limit of Reporting
  - Normal Primary sample
  - Field\_D Intra-laboratory duplicate sample
  - Interlab\_D Inter-laboratory duplicate sample
  - Denotes first time detection above LOR
  - Denotes new exceedence of human health screening criteria
  - Denotes new exceedence of ecological screening criteria

Table T6 - Surface Water Analytical Results

**Notes**  
 LOR Limit of Reporting  
 Normal Primary sample  
 Field\_D Intra-laboratory duplicate sample  
 Interlab\_D Inter-laboratory duplicate sample  
 Denotes first time detection above LOR  
 Denotes new exceedence of human health screening criteria  
 Denotes new exceedence of ecological screening criteria  
 #1 Reported Analyte LOR is higher than Requested Analyte LOR

## Calibration Certificates

## Appendix C Calibration Certificates

<b>Company Name</b>	WAM Scientific
<b>Office Address</b>	26 Bungarra Crescent, Chipping Norton NSW 2170
<b>Phone Number</b>	+61 405 241 484
<b>Contact Name</b>	[REDACTED]
<b>Instrument</b>	YSI Professional Plus Water Quality Meter w/ 1m Quatro Cable
<b>Serial Number</b>	20G100643
<b>Client Name</b>	[REDACTED] (AECOM Australia)
<b>Project Number</b>	60612562 Task 2.1
<b>Comments</b>	-

**Instrument Check**

Item	Test	Test Passed	Comments
2 x Alkaline C-size Batteries	Klein Tools MM300 Multimeter	✓	Both batteries reading above 2.9V
Battery Saver Function	Operation	✓	Automatically turns off after 60 minutes if idle
Unit Display	Operation	✓	Screen visible, no damage
Keypad	Operation	✓	Responsive, no damage
Connection Port and Cable	Condition/Check	✓	Clean, no damage
Monitor Housing	Condition/Check	✓	No damage
Firmware	Version	✓	4.0.0
pH Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
pH millivolts for pH 7.00	Calibration	✓	pH 7.00 calibration range between 0 mV ± 50 mV
pH millivolts for pH 4.00	Calibration	✓	pH 4 mV range +165 to +180 from 7 buffer mV value
pH slope	Calibration	✓	Range between 55 to 60 mV/pH (ideal value 59 mV)
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
ORP Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
ORP Reading	Calibration	✓	Within ± 80 mV of reference Zobell Reading
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
Conductivity/Temp Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
Conductivity Cell	Calibration	✓	Conductivity cell constant 5.0 ± 1.0 in GLP file
Clean Sensor Readings	Calibration	✓	Clean sensor reads less than 3 uS/cm in dry air
Dissolved Oxygen Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
DO Cap	Condition/Calibration	✓	1.25 mil PE membrane (yellow membrane)
DO Sensor in Use	Condition	✓	Polarographic DO sensor
DO Sensor Value	Calibration	✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA

**Instrument Readings**

Parameter	Standard Used	Reference No.	Calibration Value	Observed	Actual	Units
Temperature	Centre 370 Thermometer	Room Temp.	20.3	20.3	20.3	°C
pH	pH 4.00	351750	4.01	4.08	4.01	pH
pH	pH 7.00	351621	7.00	7.00	7.00	pH
Conductivity	2760 µS/cm at 25°C	362912	2760	2738	2760	µS/cm
ORP (Ref. check only)	Zobell A & B	364644/363903	237.5	237.2	237.5	mV
Zero Dissolved O <sub>2</sub>	NaSO <sub>3</sub> in Distilled H <sub>2</sub> O	362832	0.0	-0.4	0.0	%
100% Dissolved O <sub>2</sub>	100% Air Saturated H <sub>2</sub> O	Fresh Air	100.0	101.6	100.0	%

**Declaration**

**WAM Scientific** certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The calibration data supplied was obtained in accordance with manufacturer's specifications using solutions of known values.

<b>Calibrated By</b>	[REDACTED]
<b>Calibration Date</b>	02/11/2021
<b>Calibration Due</b>	02/05/2022

**FQM - Water Quality Meter Calibration Record**

Project Name:	OMP		Project Number:	60612562	
Project Location:	Williamstown		Client:	Defence	
PM Name:	JB		Fieldwork Staff Name:	P.Y	
This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.					
<b>INSTRUMENT DETAILS</b>					
Supplier:	WAMSCIENTIFIC				
Make and Model:	Professional Plus

## Analytical Data Validation

## Appendix D Analytical Data Validation

<b>Project number:</b>	60612562	<b>Validation by:</b>	██████████	<b>Date:</b>	14/12/2021
<b>Client:</b>	Defence	<b>Data verified by:</b>	██████████	<b>Date:</b>	17/01/2022
<b>Site:</b>	RAAF Base Williamtown and Management Area		<b>Project Manager:</b>	██████████	
<b>Matrix type:</b>	Soil, Sediment, Surface Water and Groundwater				
<b>Primary Samples:</b>	12 Soil, 24 Sediment, 21 Surface Water and 95 Groundwater				
<b>Laboratory:</b>	ALS (Primary) and Envirolab (Secondary)				
<b>Lab reference:</b>	ES2143044, ES2143045, ES2143046, ES2143047, ES2143048, ES2143049, ES2143050, ES2143051, ES2143052, ES2143053, ES2143123, ES2143600, 284113 and 284113-A				
<b>Key Issues:</b>	No significant issues were identified that have the potential to impact upon the reliability of the data. AECOM considers that the field and laboratory QA/QC procedures were appropriate for the purposes of the investigation.				
<b>Field Quality Assurance and Quality Controls</b>					
Field DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2021).				
Sampling personnel	Sampling was conducted by ██████████ between 08/11/2021 and 30/11/2021. Field personnel were suitably qualified and experienced AECOM environmental scientists and engineers.				
Sampling Methodology	<p>Groundwater samples were collected using pre-deployed Hydrasleeve™ samplers or directly into laboratory supplied bottles for bore water accessed by tap. Sample bottles were filled to the top, following laboratory instructions, caps immediately applied and stored on ice for preservation. Water quality parameters were collected from the Hydrasleeve™ sampler or tap and recorded using a water quality meter once field values had stabilised.</p> <p>Surface water samples were collected from immediately below the water surface (approximately 10 cm below the surface water level, where depth permitted) to minimise collection of sediment, surface film or floating materials in the samples. Laboratory supplied bottles were lowered into the water (either by hand or using a sampling pole) with the cap immediately applied once the container was full.</p> <p>Sediment and soil samples were collected using a trowel or gloved hand and deposited directly into laboratory prepared containers. The containers were filled to the top, following laboratory instructions, and stored on ice for preservation.</p> <p>After each sample was collected, re-usable equipment was decontaminated using Liquinox and dedicated nitrile gloves were disposed of in waste bins.</p>				
Chain of Custody	All samples taken were recorded on the Chain of Custody documents (COC) and subsequent email amendments and analysed for requested analytes.				
Rinsate Blank Sampling	Rinsate blank samples were collected at a frequency of one per day of sampling where equipment was re-used and decontaminated between sample points.				

<p>Frequency of field QC</p>	<p>Field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a frequency of one per ten primary samples (10%) in accordance with the DQOs. In total:</p> <ul style="list-style-type: none"> <li>• 12 water field duplicates and 12 water field triplicates were collected for 116 primary water samples</li> <li>• 4 soil field duplicates and 4 soil field triplicates were collected for 36 primary soil samples.</li> </ul>
<p>Handling and preservation</p>	<p>All samples were placed in a chilled cooler immediately after sampling until handed to the laboratory. Samples were received preserved and chilled at the primary and secondary laboratories, with most containers received within the recommended temperature range (<math>4 \pm 2^{\circ}\text{C}</math>), except for the following work order where the recorded temperature was above the recommended range:</p> <ul style="list-style-type: none"> <li>• ES2143600 (<math>8.9^{\circ}\text{C}</math>)</li> <li>• 284113 (<math>12^{\circ}\text{C}</math>)</li> </ul> <p>As the samples in this batch were analysed only for PFAS, the elevated temperature is not expected to impact the overall data quality and interpretation of its results.</p> <p>All samples were received at the laboratory in appropriate sample containers.</p>
<p>Calibration of equipment</p>	<p>Measurements of water geochemical parameters were undertaken using the YSI WQM Professional Plus, which was calibrated by the supplier prior to use, in accordance with manufacturer's instructions and daily by the field personnel. Measurement of depth to groundwater was undertaken using an interface probe, which was serviced by the supplier prior to use.</p> <p>The equipment calibration and service certificates are presented in <b>Appendix C</b>.</p>
<p><b>Laboratory Quality Assurance and Quality Controls</b></p>	
<p>Tests requested/reported</p>	<p>All primary samples were analysed for the PFAS extended suite. All samples and requested analyses were documented in the chain of custody (COC) and any subsequent email amendments.</p>
<p>Holding time compliance</p>	<p>Samples were extracted and analysed within recommended holding times.</p> <p>As moisture content is not a contaminant and not assessed, there is no impact to the interpretation of results.</p>
<p>Laboratory</p>	<p>The primary laboratory analysis was conducted by ALS Environmental Pty Ltd (Sydney), a National Association of Testing Authorities (NATA) accredited laboratory (Accreditation No. 825). The secondary sample analysis was conducted at the Envirolab Services Pty Ltd (Envirolab, Sydney), also a NATA accredited laboratory (accreditation number 2901).</p>

Frequency of laboratory QC	<p>The laboratory reported a sufficient frequency of quality control samples to assess whether the results had been reported to an acceptable accuracy and precision, except for the following laboratory certificates which reported quality control frequency outliers:</p> <p><b>Laboratory Duplicates (DUP) Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS:</b></p> <ul style="list-style-type: none"> <li>• ES2143044 – 7.28, below the expected 10.0</li> <li>• ES2143045 – 0.0, below the expected 10.0</li> <li>• ES2143123 – 5.26, below the expected 10.0</li> </ul> <p><b>Laboratory Duplicates (DUP) Moisture Content:</b></p> <ul style="list-style-type: none"> <li>• ES2143053 – 9.38, below the expected 10.0</li> </ul> <p><b>Matrix Spikes (MS) Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS:</b></p> <ul style="list-style-type: none"> <li>• ES2143044 – 3.97, below the expected 5.0</li> <li>• ES2143045 – 0.0, below the expected 5.0</li> <li>• ES2143123 – 2.63, below the expected 5.0</li> </ul> <p>The precision and accuracy of the data can be assessed as acceptable based on method blanks, laboratory control spike and surrogate spike recoveries, which were reported at the required frequencies and within control limits and available laboratory duplicates and matrix spikes for the same analytical group which were reported within control limits.</p>
Method Blank (MB)	<p>All method blank concentrations were reported &lt;LOR for the analytes tested. This is presented in the Quality Control Reports for both laboratories.</p>
Laboratory Duplicate (LD) Relative Percent Difference (RPD)	<p>The reported laboratory duplicate's Relative Percentage Differences (RPDs) were within laboratories control limits. The laboratory duplicate RPDs are presented in the Quality Control Reports for both laboratories.</p>
Laboratory Control Spike (LCS) recovery	<p>Laboratory control spike (LCS) recoveries were within control limits. This is presented in the Quality Control Reports for both laboratories.</p>
Matrix Spike (MS) recovery	<p>Matrix spike (MS) recoveries mostly met the DQI, except for the following:</p> <p><b>Non-determined MS recoveries for Perfluorooctane sulfonic acid (PFOS):</b></p> <ul style="list-style-type: none"> <li>• 0908_MW175D_211116 – ES2143044</li> <li>• Anonymous soil sample from non-AECOM batch – reported for ES2143123</li> <li>• Anonymous water sample from non-AECOM batch – reported for ES2143046 and ES2143123</li> </ul> <p><b>Non-determined MS recoveries for Perfluorohexane sulfonic acid (PFHxS):</b></p> <ul style="list-style-type: none"> <li>• Anonymous water sample from non-AECOM batch – reported for ES2143046 and ES2143123</li> </ul> <p>These non-determinations, due to background levels being greater than or equal to four times spike levels, do not reflect method bias or affect data interpretation.</p>
Surrogate spike (SS) recovery	<p>The reported surrogate spike recoveries were within laboratory control limits. This is presented in the Quality Control Reports for both laboratories.</p>

Quality Assurance and Quality Controls Data Evaluation	
Comparison of Esdat data and laboratory results	No anomalous results between Esdat output data and laboratory analytical results were noted.
Data transcription	The laboratory results within the electronic data, the laboratory reports, and tables generated by AECOM were checked, with no anomalies identified.
Limits of reporting	With the exception of the 99% ecosystem protection values for PFOS, the Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted screening levels. As per the SAQP (AECOM, 2021), the laboratory LOR was adopted for screening purposes at locations where PFOS was analysed at the standard LOR.
Rinsate Blank Sample Results	The results of the Rinsate Blank sample analysis ( <b>Table D3</b> ) indicated that concentrations of PFAS were below the laboratory limits of reporting (LORs) for all analytes tested, indicating decontamination procedures were adequate.
Field duplicate and RPDs	<p>Field duplicate RPDs were reported within the acceptable range (0%-30%), with the exception for:</p> <p><b>MW178/QC107</b></p> <ul style="list-style-type: none"> <li>Perfluorooctane sulfonic acid (PFOS): 40%</li> </ul> <p><b>SW001/QC114</b></p> <ul style="list-style-type: none"> <li>Perfluorobutane sulfonic acid (PFBS): 33%</li> </ul> <p><b>SW023/QC110</b></p> <ul style="list-style-type: none"> <li>Perfluorobutane sulfonic acid (PFBS): 40%</li> </ul> <p><b>SD001/QC115</b></p> <ul style="list-style-type: none"> <li>Perfluorooctane sulfonic acid (PFOS): 40%</li> <li>Perfluorotridecanoic acid (PFTrDA): 127%</li> <li>Perfluorohexanoic acid (PFHxA): 86%</li> <li>Perfluoroheptane sulfonic acid (PFHpS): 40%</li> </ul> <p><b>SD023/QC113</b></p> <ul style="list-style-type: none"> <li>Perfluorohexane sulfonic acid (PFHxS): 67%</li> <li>Sum of PFHxS and PFOS: 67%</li> <li>Sum of PFAS: 67%</li> </ul> <p>These RPDs outside the 30% acceptable range can be considered acceptable, in line with the DQIs, as the results are less than 10 times the LOR (no limit for acceptable range) or are less than 20 times the LOR (and the RPD is less than 50%). Water and Soil RPD results are provided in Table D1 and Table D2.</p>

Field triplicate RPDs

Field triplicate RPDs were reported mostly within acceptable range (0%-30%), except for:

**MW134I/QC209**

- Perfluorooctane sulfonic acid (PFOS): 67%

**MW108S/QC203**

- Perfluorooctanoic Acid (PFOA): 67%
- Perfluoroheptane sulfonic acid (PFHpS): 67%
- Perfluorobutane sulfonic acid (PFBS): 40%

**MW260S/QC205**

- Perfluorohexane sulfonic acid (PFHxS): 67%

**MW160/QC206**

- Sum of PFHxS and PFOS: 40%
- Sum of PFAS: 40%

**MW132D/QC207**

- Perfluorobutane sulfonic acid (PFBS): 156%

**MW468/QC208**

- 6:2 Fluorotelomer sulfonic acid (6:2 FTS): 40%

**SW024/QC210**

- Perfluorooctane sulfonic acid (PFOS): 35%
- Perfluorohexanoic acid (PFHxA): 67%

**SW062/QC211**

- Perfluorooctane sulfonic acid (PFOS): 46%
- Perfluorohexanoic acid (PFHxA): 67%

**SD014/QC212**

- Perfluorooctane sulfonic acid (PFOS): 41%
- Perfluoropentane sulfonic acid (PFPeS): 67%
- Perfluorohexanoic acid (PFHxA): 35%
- Perfluoroheptanoic acid (PFHpA): 40%
- Perfluorobutane sulfonic acid (PFBS): 143%
- Sum of PFHxS and PFOS: 40%
- Sum of PFAS 40%

**SD001/QC215**

- Perfluorooctanoic Acid (PFOA): 100%
- Perfluorooctane sulfonic acid (PFOS): 61%
- Perfluorohexane sulfonic acid (PFHxS): 126%
- Perfluorotridecanoic acid (PFTrDA): 57%
- Perfluorohexanoic acid (PFHxA): 133%
- Perfluoroheptane sulfonic acid (PFHpS): 100%
- Perfluorodecane sulfonic acid (PFDS): 67%
- Sum of PFHxS and PFOS: 66%
- Sum of PFAS: 67%

These RPDs outside the 30% acceptable range can be considered acceptable, in line with the DQIs, as the results are less than 10 times the LOR (no limit for acceptable range) or are less than 20 times the LOR (and the RPD is less than 50%). Some of the elevated RPDs may be attributed to the sediment matrix type and its heterogenous nature. Water and Soil RPD results are provided in Table D1 and Table D2.

**Comments**

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

\*RPDs have only been considered where a concentration is greater than 1 times the LOR.  
 \*\*High RPDs are in bold (Acceptable RPDs for each LOR multiplier range are: 30 (1-10xLOR); 30 (10-20xLOR); 30 (>20xLOR))  
 \*\*\*Interlab Duplicates are matched on a per compound basis as methods vary between laboratories.  
 Any methods in the row header relate to those used in the primary laboratory  
 nc = RPD non-calculable due to one or both results being below the laboratory LOR

\*RPDs have only been considered where a concentration is greater than 1 times the LOR.  
 \*\*High RPDs are in bold (Acceptable RPDs for each LOR multiplier range are: 30 (1-10xLOR); 30 (10-20xLOR); 30 (>20xLOR)  
 \*\*\*Interlab Duplicates are matched on a per compound basis as methods vary between laboratories.  
 Any methods in the row header relate to those used in the primary laboratory  
 nc = RPD non-calculable due to one or both results being below the laboratory LOR

Quote number : ES2021AECOMAU0024 (SY/139/19 v4  
60612562\_2.1)  
QC Level : NEPM 2013 B3 & ALS QC Standard

Dates

Date Samples Received : 27-Nov-2021 12:36  
Client Requested Due Date : 03-Dec-2021  
Issue Date : 08-Dec-2021  
Scheduled Reporting Date : 03-Dec-2021

Delivery Details

Mode of Delivery : Client Drop Off  
No. of coolers/boxes : ----  
Receipt Detail :  
Security Seal : Not Available  
Temperature : 3.5°C - Ice present  
No. of samples received / analysed : 114 / 112

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which indicates the addition of samples #113 and #114.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Subject: RE: [EXTERNAL] RE: SRN for ALS Workorder : ES2143123 | Your Reference: NSW\_0908\_PFASOMP

Thanks for sending these photos. They must have been missed in the final count that was done before submitting.

Please could you action as listed below? And could you also send the Esdat format SRN so I can do an in-depth check for time stamps and labels against my records please?

Environmental Division  
Sydney  
Work Order Reference  
**ES2143044**

Telephone : + 61-2-8784 8656

Unfortunately none of those resolve our missing sample #023 (0908\_SW081\_211117). I will check again on our end to see if it can be located.

Label	Bottle Date	Bottle Barcode	Action
MW1341	18/11/2021	00352101023258	Please add as new sampled to work order ES2143044. Date time as 18/11/21 09:23 AM. Analysis as EP231X. To re-issue SRN, and this email request
MW1341	18/11/2021	00352101023118	Please add as new sampled to work order ES2143044. Date time as 18/11/21 09:23 AM. Analysis as EP231X. To re-issue SRN, and this email request
MW231S	12/11/2021	00352101023329	Please add to existing sample (ES2143047-002) in work order ES2143047 as extra bottle. All details as per logged sample. Extra bottle collected for
MW260S	12/11/2021	00352101023131	Please add as new sampled to work order ES2143044. Date time as 12/11/21 16:10. Analysis as EP231X. To re-issue SRN, and this email request
MW260S	12/11/2021	00352101023253	Please add as new sampled to work order ES2143044. Date time as 12/11/21 16:10. Analysis as EP231X. To re-issue SRN, and this email request

Thank you for your assistance on this.

I'm sorry to hear about this, checking the scanning again the attached have not gone through but came in with the same work. Could you please advise if any of the attached may be relating to these missing samples?

Best regards,

Client Services Officer, Environmental  
Sydney

For this work order, on top of the changes already discussed in attached email chain, can you please have the team double check sample #023 (0908\_SW081\_211117) which is marked as not received for this batch?

Cam and I definitely collected this one and we believe we submitted all samples. There were many work orders in the same eskies, so maybe it was grouped with one of the other ones below?

0908\_PFASOMP batches from November: ES2143044, ES2143045, ES2143046, ES2143047, ES2143048, ES2143049, ES2143050, ES2143051, ES2143052, ES2143053 and ES2143123.

Issue Date : 08-Dec-2021 18:19

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes Organic Coordinator, LCMS Coordinator, and Sydney Inorganics, Smithfield, NSW.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X: Positive result for analyte 6:2 Fluorotelomer sulfonic acid (6:2 FTS) on sample ES2143044\_048 has been confirmed by re-extraction re-analysis.
- EP231X: PFAS results for sample #113 and #114 confirmed by re-extraction and re-analysis.
- EP231X: Sample ES2143044\_090 required dilution due to sample matrix interferences (Internal standard suppression and retention time shift). LOR values have been adjusted accordingly. Surrogates were diluted out of analytical range and were not determined.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2143044	Page	: 1 of 16
Amendment	: 1		
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 27-Nov-2021
Site	: 0908 Williamtown	Issue Date	: 08-Dec-2021
Sampler	: [REDACTED]	No. of samples received	: 114
Order number	: 60612562_2.1	No. of samples analysed	: 112

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

### Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
<b>Matrix Spike (MS) Recoveries</b>							
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143044--079	0908_MW175D_211116	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	11	151	7.28	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	6	151	3.97	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>							
<b>Laboratory Duplicates (DUP)</b>							
Moisture Content	EA055	5	46	10.87	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	37	10.81	10.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	37	5.41	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Method Blanks (MB)</b>

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ES2143044

Page : 1 of 35

Amendment : 1

Client : AECOM AUSTRALIA PTY LTD
Contact :
Address : LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000

Laboratory : Environmental Division Sydney
Contact :
Address : 277-289 Woodpark Road Smithfield NSW Australia 2164

Telephone :
Project : NSW\_0908\_PFASOMP
Order number : 60612562\_2.1
C-O-C number : 29733

Telephone : +61 2 8784 8555
Date Samples Received : 27-Nov-2021
Date Analysis Commenced : 27-Nov-2021
Issue Date : 08-Dec-2021

Sampler :
Site : 0908 Williamtown
Quote number : SY/139/19 v4 60612562\_2.1
No. of samples received : 114
No. of samples analysed : 112

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Rows include Organic Coordinator, LCMS Coordinator, and LCMS Coordinator.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: SOIL

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

Order number : 60612562\_2.1

Page : 1 of 3  
Quote number : ES2021AECOMAU0024 (SY/139/19 v4  
60612562\_2.1)

C-O-C number : 29916

QC Level : NEPM 2013 B3 & ALS QC Standard

Site : Resi #2

Sampler : [REDACTED]

Dates

Date Samples Received : 26-Nov-2021 12:30  
Client Requested Due : 03-Dec-2021  
Date

Issue Date : 27-Nov-2021  
Scheduled Reporting Date : 03-Dec-2021

Delivery Details

Mode of Delivery : Client Drop Off  
No. of coolers/boxes : ----  
Receipt Detail :

Security Seal : Not Available  
Temperature : 3.5°C - Ice present  
No. of samples received / analysed : 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## Analytical Results

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis			
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>							
<b>Laboratory Duplicates (DUP)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	0	19	0.00	10.00	✖	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	19	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Method Blanks (MB)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	19	5.26	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	0	19	0.00	5.00	✖	NEPM 2013 B3 & ALS QC Standard

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Project : NSW\_0908\_PFASOMP

Date Samples Received : 26-Nov-2021

Order number : 60612562\_2.1

Date Analysis Commenced : 29-Nov-2021

C-O-C number : 29916

Issue Date : 06-Dec-2021

Sampler : [REDACTED]

Site : Resi #2

Quote number : SY/139/19 v4 60612562\_2.1

No. of samples received : 2

No. of samples analysed : 2

Accreditation No. 825  
Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
RPD = Relative Percentage Difference  
# = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.
Please direct any queries you have regarding this work order to the above ALS laboratory contact.
Analytical work for this work order will be conducted at ALS Sydney.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- **NO** Quality Control Sample Frequency Outliers exist.

### Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: WATER

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
<b>Matrix Spike (MS) Recoveries</b>							
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143118--064	Anonymous	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143118--064	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: WATER

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	37	5.41	5.00	✔	NEPM 2013 B3 & ALS QC Standard

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

## Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: WATER

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

Thanks for sending these photos. They must have been missed in the final court that was done before submitting.

Please could you action as listed below? And could you also send the Esdat format SRN so I can do an in-depth check for time stamps and labels against my records please?

LC121

Unfortunately none of those resolve our missing sample #023 (0908\_SW081\_211117). I will check again on our end to see if it can be located.

Label	Bottle Date	Bottle Barcode	Action

For this work order, on top of the changes already discussed in attached email chain, can you please have the team double check sample #023 (0908\_SW081\_211117) which is marked as not received for this batch?

Can and I definitely collected this one and we believe we submitted all samples. There were many work orders in the same eskies, so maybe it was grouped with one of this other ones below?

0908\_PFA5OMP batches from November: ES2143044, ES2143045, ES2143046, ES2143047, ES2143048, ES2143049, ES2143050, ES2143051, ES2143052, ES2143053 and ES2143123.

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2143047	Page	: 1 of 4
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 26-Nov-2021
Site	: Resi #3	Issue Date	: 03-Dec-2021
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 3
Order number	: 60612562_2.1	No. of samples analysed	: 3

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

No. of coolers/boxes : ----  
Receipt Detail :

Security Seal : Not Available  
Temperature : 3.5°C - Ice present  
No. of samples received / analysed : 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes entries for LCMS Coordinator at Sydney Inorganics and Sydney Organics.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Order number	: 60612562_2.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

### Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Method Container / Client Sample ID(s)	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
<b>EA055: Moisture Content (Dried @ 105-110°C)</b>						
<b>HDPE Soil Jar</b> 0908_SD019_211112	----	----	----	02-Dec-2021	26-Nov-2021	6

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

### Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>							
<b>Laboratory Duplicates (DUP)</b>							
Moisture Content	EA055	2	20	10.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	18	11.11	10.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ES2143048

Page : 1 of 11

Client : AECOM AUSTRALIA PTY LTD

Laboratory : Environmental Division Sydney

Contact : [REDACTED]

Contact : [REDACTED]

Address : LEVEL 21 420 GEORGE STREET  
SYDNEY NSW, AUSTRALIA 2000

Address : 277-289 Woodpark Road Smithfield NSW Australia 2164

Telephone : ----

Telephone : +61 2 8784 8555

Project : NSW\_0908\_PFASOMP

Date Samples Received : 26-Nov-2021

Order number : 60612562\_2.1

Date Analysis Commenced : 29-Nov-2021

C-O-C number : 30001

Issue Date : 06-Dec-2021

Sampler : [REDACTED]

Site : Resi #4

Quote number : SY/139/19 v4 60612562\_2.1

No. of samples received : 2

No. of samples analysed : 2

Accreditation No. 825  
Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.
Please direct any queries you have regarding this work order to the above ALS laboratory contact.
Analytical work for this work order will be conducted at ALS Sydney.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2143049	Page	: 1 of 4
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 26-Nov-2021
Site	: Resi #5	Issue Date	: 03-Dec-2021
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 2
Order number	: 60612562_2.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2143051	Page	: 1 of 4
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 26-Nov-2021
Site	: Resi #7	Issue Date	: 03-Dec-2021
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 1
Order number	: 60612562_2.1	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
<span style="background-color: black; color: black;">[REDACTED]</span>	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
<span style="background-color: black; color: black;">[REDACTED]</span>	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 26-Nov-2021
Site	: Resi #8	Issue Date	: 06-Dec-2021
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 6
Order number	: 60612562_2.1	No. of samples analysed	: 6

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

### Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>							
<b>Laboratory Duplicates (DUP)</b>							
Moisture Content	EA055	2	20	10.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	18	11.11	10.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	18	5.56	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Method Blanks (MB)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	18	5.56	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	18	5.56	5.00	✔	NEPM 2013 B3 & ALS QC Standard

### Matrix: WATER

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ES2143052

Page : 1 of 11

Client : AECOM AUSTRALIA PTY LTD

Laboratory : Environmental Division Sydney

Contact : [REDACTED]

Contact : [REDACTED]

Address : LEVEL 21 420 GEORGE STREET  
SYDNEY NSW, AUSTRALIA 2000

Address : 277-289 Woodpark Road Smithfield NSW Australia 2164

Telephone : ----

Telephone : +61 2 8784 8555

Project : NSW\_0908\_PFASOMP

Date Samples Received : 26-Nov-2021

Order number : 60612562\_2.1

Date Analysis Commenced : 29-Nov-2021

C-O-C number : 30339

Issue Date : 06-Dec-2021

Sampler : [REDACTED]

Site : Resi #8

Quote number : SY/139/19 v4 60612562\_2.1

No. of samples received : 6

No. of samples analysed : 6

Accreditation No. 825  
Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.
Please direct any queries you have regarding this work order to the above ALS laboratory contact.
Analytical work for this work order will be conducted at ALS Sydney.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Includes entries for LCMS Coordinator at Sydney Inorganics and Sydney Organics.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Order number	: 60612562_2.1	No. of samples analysed	: 5

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

### Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Moisture Content	3	32	9.38	10.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ES2143053

Page : 1 of 11

Client : AECOM AUSTRALIA PTY LTD

Laboratory : Environmental Division Sydney

Contact : [REDACTED]

Contact : [REDACTED]

Address : LEVEL 21 420 GEORGE STREET  
SYDNEY NSW, AUSTRALIA 2000

Address : 277-289 Woodpark Road Smithfield NSW Australia 2164

Telephone : ----

Telephone : +61 2 8784 8555

Project : NSW\_0908\_PFASOMP

Date Samples Received : 26-Nov-2021

Order number : 60612562\_2.1

Date Analysis Commenced : 29-Nov-2021

C-O-C number : 30742

Issue Date : 06-Dec-2021

Sampler : [REDACTED]

Site : Resi #9

Quote number : SY/139/19 v4 60612562\_2.1

No. of samples received : 5

No. of samples analysed : 5

Accreditation No. 825  
Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
[REDACTED]	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Site : WLM\_SW/SD
Sampler :

QC Level : NEPM 2013 B3 & ALS QC Standard

Dates

Date Samples Received : 26-Nov-2021 12:36
Client Requested Due Date : 03-Dec-2021

Issue Date : 06-Dec-2021
Scheduled Reporting Date : 03-Dec-2021

Delivery Details

Mode of Delivery : Client Drop Off
No. of coolers/boxes :
Receipt Detail :

Security Seal : Not Available
Temperature : 3.5°C - Ice present
No. of samples received / analysed : 42 / 41
No. of samples NOT collected : 1

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.
Sample 0908\_SW081\_211117 was not received due to the following reason: not received
Please direct any queries you have regarding this work order to the above ALS laboratory contact.
Analytical work for this work order will be conducted at ALS Sydney.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

Accreditation No. 825  
 Accredited for compliance with  
 ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## Analytical Results

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2143123	Page	: 1 of 12
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 26-Nov-2021
Site	: WLM_SW/SD	Issue Date	: 06-Dec-2021
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 43
Order number	: 60612562_2.1	No. of samples analysed	: 41

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- Analysis Holding Time Outliers exist - please see following pages for full details.

#### Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

### Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
<b>Matrix Spike (MS) Recoveries</b>							
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143118--045	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
<b>Matrix Spike (MS) Recoveries</b>							
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143118--064	Anonymous	Perfluorohexane sulfonic acid (PFHxS)	355-46-4	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.
EP231A: Perfluoroalkyl Sulfonic Acids	ES2143118--064	Anonymous	Perfluorooctane sulfonic acid (PFOS)	1763-23-1	Not Determined	----	MS recovery not determined, background level greater than or equal to 4x spike level.

### Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Method	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
<b>EA055: Moisture Content (Dried @ 105-110°C)</b>						
HDPE Soil Jar 0908_SD079_211112	----	----	----	30-Nov-2021	26-Nov-2021	4

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2	38	5.26	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	38	2.63	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

Matrix: SOIL

Evaluation: ✘ = Holding time breach ; ✔ = Within holding time.

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

### Matrix: SOIL

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>							
<b>Laboratory Duplicates (DUP)</b>							
Moisture Content	EA055	5	49	10.20	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	4	40	10.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	40	5.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Method Blanks (MB)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	40	5.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	40	5.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard

### Matrix: WATER

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

QUALITY CONTROL REPORT

Work Order : ES2143123

Page : 1 of 16

Client : AECOM AUSTRALIA PTY LTD

Laboratory : Environmental Division Sydney

Contact : [REDACTED]

Contact : [REDACTED]

Address : LEVEL 21 420 GEORGE STREET  
SYDNEY NSW, AUSTRALIA 2000

Address : 277-289 Woodpark Road Smithfield NSW Australia 2164

Telephone : ----

Telephone : +61 2 8784 8555

Project : NSW\_0908\_PFASOMP

Date Samples Received : 26-Nov-2021

Order number : 60612562\_2.1

Date Analysis Commenced : 27-Nov-2021

C-O-C number : 30004

Issue Date : 06-Dec-2021

Sampler : [REDACTED]

Site : WLM\_SW/SD

Quote number : SY/139/19 v4 60612562\_2.1

No. of samples received : 43

No. of samples analysed : 41

Accreditation No. 825  
Accredited for compliance with  
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

[REDACTED]	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

No. of samples received / analysed : 1 / 1

General Comments

- This report contains the following information:
- Sample Container(s)/Preservation Non-Compliances
- Summary of Sample(s) and Requested Analysis
- Proactive Holding Time Report
- Requested Deliverables
Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.
Please direct any queries you have regarding this work order to the above ALS laboratory contact.
Analytical work for this work order will be conducted at ALS Sydney.
Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
Analytical Results
Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], LCMS Coordinator, Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 01-Dec-2021
Site	: WLM (SW)	Issue Date	: 08-Dec-2021
Sampler	: [REDACTED]	No. of samples received	: 1
Order number	: 60612562_2.1	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER** Evaluation: \* = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Table with 3 columns: Signatories, Position, Accreditation Category. Row 1: [Redacted], LCMS Coordinator, Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

### Additional Info

Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt.

Requests for longer term sample storage must be received in writing.

Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.

TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

Method ID	Methodology Summary
<p><b>Inorg-008</b></p> <p><b>Org-029</b></p>	<p>Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.</p> <p>Soil samples are extracted with basified Methanol. Waters and soil extracts are directly injected and/or concentrated/extracted using SPE. TCLPs/ASLP leachates are centrifuged, the supernatant is then analysed (including amendment with solvent) - as per the option in AS4439.3.</p> <p>Analysis is undertaken with LC-MS/MS.</p> <p>PFAS results include the sum of branched and linear isomers where applicable.</p> <p>Please note that PFAS results are corrected for Extracted Internal Standards (QSM 5.3 Table B-15 terminology), which are mass labelled analytes added prior to sample preparation to assess matrix effects and verify processing of the sample. PFAS analytes without a commercially available mass labelled analogue are corrected vs a closely eluting mass labelled PFAS compound. Surrogates are also reported, in this context they are mass labelled PFAS compounds added prior to extraction but are used as monitoring compounds only (not used for result correction). Envicarb (or similar) is used discretionally to remove interfering matrix components.</p> <p>Please contact the laboratory if estimates of Measurement Uncertainty are required as per WA DER.</p>

**Result Definitions**

<b>NT</b>	Not tested
<b>NA</b>	Test not required
<b>INS</b>	Insufficient sample for this test
<b>PQL</b>	Practical Quantitation Limit
<b>&lt;</b>	Less than
<b>&gt;</b>	Greater than
<b>RPD</b>	Relative Percent Difference
<b>LCS</b>	Laboratory Control Sample
<b>NS</b>	Not specified
<b>NEPM</b>	National Environmental Protection Measure
<b>NR</b>	Not Reported

## Quality Control Definitions

<b>Blank</b>	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
<b>Duplicate</b>	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
<b>Matrix Spike</b>	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
<b>LCS (Laboratory Control Sample)</b>	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
<b>Surrogate Spike</b>	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.
Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.	
The recommended maximums for analytes in urine are taken from "2018 TLVs and BEIs", as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.	
Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2	

## Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

## Report Comments

For PFAS Extracted Internal Standards denoted with # or outside the 50-150% acceptance range, the respective target analyte results may be unaffected, in other circumstances the PQL has been raised to accommodate the outlier(s).

Method ID	Methodology Summary
<p><b>Inorg-008</b></p> <p><b>Org-029</b></p>	<p>Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.</p> <p>Soil samples are extracted with basified Methanol. Waters and soil extracts are directly injected and/or concentrated/extracted using SPE. TCLPs/ASLP leachates are centrifuged, the supernatant is then analysed (including amendment with solvent) - as per the option in AS4439.3.</p> <p>Analysis is undertaken with LC-MS/MS.</p> <p>PFAS results include the sum of branched and linear isomers where applicable.</p> <p>Please note that PFAS results are corrected for Extracted Internal Standards (QSM 5.3 Table B-15 terminology), which are mass labelled analytes added prior to sample preparation to assess matrix effects and verify processing of the sample. PFAS analytes without a commercially available mass labelled analogue are corrected vs a closely eluting mass labelled PFAS compound. Surrogates are also reported, in this context they are mass labelled PFAS compounds added prior to extraction but are used as monitoring compounds only (not used for result correction). Envicarb (or similar) is used discretionally to remove interfering matrix components.</p> <p>Please contact the laboratory if estimates of Measurement Uncertainty are required as per WA DER.</p>

## Quality Control Definitions

<b>Blank</b>	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
<b>Duplicate</b>	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
<b>Matrix Spike</b>	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
<b>LCS (Laboratory Control Sample)</b>	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
<b>Surrogate Spike</b>	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.
Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.	
The recommended maximums for analytes in urine are taken from "2018 TLVs and BEIs", as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.	
Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2	

## Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

## Report Comments

For PFAS Extracted Internal Standards denoted with # or outside the 50-150% acceptance range, the respective target analyte results may be unaffected, in other circumstances the PQL has been raised to accommodate the outlier(s).

## 1.0 Introduction

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) at the RAAF Base Williamtown ('the Base') and the Williamtown Management Area in the NSW & JBT Region.

In February 2022, AECOM undertook an aquatic biota sampling event at Fullerton Cove (refer to **Figure F1**, in **Appendix A**) located approximately 4 km southwest of the Base and included selected locations and specific species as outlined in the *Addendum OMP – Biota Sampling, RAAF Base Williamtown* dated 27 May 2019 (AECOM, 2019).

The monitoring event was undertaken in accordance with the *Sampling and Analysis Quality Plan (SAQP) Rev E* (AECOM, 2021).

### 1.1 Objectives

The objective of the biota sampling event is to provide the NSW Government with monitoring data of temporal variations of PFAS concentrations in selected sentinel finfish and Crustacea appropriate to support and/or update ongoing advice relating to minimising PFAS exposure.

## 2.0 Scope of Work

The planned scope of work for the biota sampling event included:

- collection of aquatic biota specimens from Fullerton Cove on 23 February 2022. The target biota species collected comprised dusky flathead (*P. fuscus*), luderick (*G. tricuspidata*) and the school prawn (*M. macleay*)
- preparation of 12 composite samples (up to 10 individuals for dusky flathead and luderick, and up to 40 individuals for school prawn) by the National Measurement Institute (NMI) laboratory.
- retention of one frozen composite sample at NMI for potential future analysis
- collection of data relating to the type and quantity of any bycatch caught in the sampling equipment
- collection of water quality parameters (dissolved oxygen, electrical conductivity, pH, redox and temperature) during sampling
- photograph the aquatic biota specimens caught and the sampling locations and keep on record in project file
- analysis of the composite samples for the extended PFAS suite at the standard laboratory limit of reporting (LOR)
- preparation of this factual biota sampling event report.

Deviations from this scope are discussed in **Section 3.0**.

### 3.0 Deviations from the SAQP

The February 2022 biota sampling event was completed in general accordance with the SAQP (AECOM, 2021), with the exception of the deviations outlined in **Table 1** below.

**Table 1** Deviations from SAQP (AECOM, 2021)

SAQP	February 2022 Sampling Event
Nets will be placed over night in the target locations and will be collected the following morning.	<p>Due to adverse weather conditions at the time of the sampling event, nets were placed in the target locations and were collected within three hours for both luderick and dusky flathead, rather than being left in place overnight.</p> <p>This change in methodology is not considered to impact upon meeting the objectives of the OMP given that sufficient numbers of dusky flathead and school prawns were collected, and DPI Fisheries advised that it was unlikely that any additional luderick would be collected due to their scarcity at the time of the sampling event.</p>
Four composite samples shall be collected per event, per target species. Each composite sample will comprise of up to 10 individual specimens and will be prepared at the laboratory under the laboratory's supervision.	<p>Due to the limited availability of luderick in Fullerton Cove during the February 2022 sampling event, DPI Fisheries were unable to obtain the target quota of individual luderick specimens to prepare four composite samples (containing up to 10 individual specimens).</p> <p>A total of six luderick (out of a target of 40) were collected during the sampling event. AECOM instructed DPI Fisheries to prepare two composite samples (comprising three individual specimens each) however due to a miscommunication, DPI Fisheries prepared four "composite" samples (two samples containing two individual specimens and two samples containing one specimen) before submitting them to the laboratory for analysis.</p> <p>While the composite samples for luderick contain fewer individual specimens than specified in the SAQP, AECOM considers the data obtained for luderick from this sampling event as reliable given that the results are within the historical data range.</p>
Annual biota sampling events are to be completed in January, commencing in December	Due to prolonged wet weather conditions, and the reported scarcity of sentinel species in Fullerton Cove, DPI Fisheries recommended delaying the start of the annual biota sampling event until February 2022 in an effort to collect the target number of individual specimens.
Method of fish euthanasia	During the February 2022 sampling event, fish were euthanised by ice and water, rather than the methodology specified in the SAQP (blunt force trauma followed by exsanguination). This alternative method was considered by DPI Fisheries to be suitable and within their permit. This change in methodology is unlikely to impact the reliability of the results.
Records of live bycatch	During the February 2022 sampling event, DPI Fisheries did not record details of live bycatch. While this is noted to be a deviation from the SAQP, it is not considered to impact the reliability of the data collected.

## 4.0 Methodology

The biota sampling event was completed at Fullerton Cove in February 2022 in general accordance with the Addendum OMP (AECOM, 2019) and the SAQP (AECOM, 2021).

### 4.1 Sampling Locations

The sampling was conducted on 23 February 2022 in Fullerton Cove from seven locations shown in **Table 2** below. Samples were collected by the NSW Department of Primary Industries (DPI), Port Stephens Fisheries Institute (Fisheries).

Refer to **Figure F2** in **Appendix A** for specific biota sampling locations.

**Table 2** Biota Sampling Locations

Sample Location ID	Sampling Date	Latitude	Longitude
1	23/02/2022	-32.8511	151.7847
2	23/02/2022	-32.8339	151.7898
3	23/02/2022	-32.8492	151.7829
4	23/02/2022	-32.8618	151.7857
5	23/02/2022	-32.8540	151.7912
6	23/02/2022	-32.8503	151.8002
7	23/02/2022	-32.8522	151.7957

### 4.2 Sample Type

The following sentinel species as outlined in the OMP Addendum (AECOM, 2019) were sampled:

- Dusky flathead (*P. fuscus*)
- Luderick (*G. tricuspidata*)
- School prawn (*M. macleayi*).

### 4.3 Sampling Methodology

DPI Fisheries were responsible for obtaining the required sampling permits, and sample collection was conducted under a Section 37 Scientific Collection Permit (Permit P01/0059), and an Animal Research Authority issued by NSW Department of Primary Industries (Permit 14-11).

#### 4.3.1 Sample Collection

Aquatic biota samples were captured utilising the following process:

- boats were used to deploy mesh netting. Nets were placed in the target locations and were collected within 3 hours for luderick and dusky flathead. School prawns were captured using an otter trawl net
- observations on the number of target species and bycatch captured were recorded. Live bycatch was returned to the water, and dead bycatch was retained and disposed
- target specimens were retrieved from the nets and euthanised by ice and water
- target specimens were placed in labelled plastic bags and transported to the Port Stephens Fisheries Institute on ice in a portable cooler.
- target specimen metrics (length, weight, bag number) were recorded at the Fisheries Institute by DPI

- water quality parameters including (dissolved oxygen, electrical conductivity, pH, redox and temperature) were recorded by NSW DPI.

#### 4.3.2 Sample Preparation

Aquatic biota sample preparation (for analysis) was undertaken utilising the following process:

- Biota sample preparation occurred at the Fisheries Institute which involved descaling the fish, removing the left fillet (with skin remaining on the fillet), and placing it into a clean plastic bag corresponding to that particular composite sample. Prawns were peeled and muscle meat (including vein) placed into the bag.
- DPI Fisheries prepared 12 composite samples, of up to 10 individuals for finfish and 40 individuals for school prawn. The bags containing the composites were frozen in readiness for shipment to the laboratory. The composite sample information is presented in **Table 3**.

The biota samples were transported directly from the Fisheries Institute to NMI laboratory, located in North Ryde NSW on ice and under chain-of-custody (CoC) conditions. Each composite sample was homogenised at the laboratory in readiness for PFAS analysis.

**Table 3 Composite Sample Information**

0908_BIOAFA059_220223	Dusky flathead	Fish-Muscle/skin	10	2, 3, 4
0908_BIOAFA060_220223	Luderick	Fish-Muscle/skin	2	3, 6
0908_BIOAFA061_220223	Luderick	Fish-Muscle/skin	2	3
0908_BIOAFA062_220223	Luderick	Fish-Muscle/skin	1	3
0908_BIOAFA063_220223	Luderick	Fish-Muscle/skin	1	3

#### 4.4 Laboratory Analysis

The composite biota tissue samples were analysed for the extended PFAS suite.

Laboratory reports and CoC documentation are presented in **Appendix C**.

## 4.5 Adopted Screening Criteria

The adopted screening criteria for this aquatic biota sampling event are sourced from the Food Standards Australia New Zealand (FSANZ) *Perfluorinated chemicals in food* (FSANZ, 2017) and are summarised in **Table 4** below.

**Table 4 PFAS Screening Criteria - Aquatic Biota**

Compound	Criteria	Comment
<b>FSANZ 2017 2-6 years Crustaceans (all species)</b>		
PFOS	0.065 mg/kg	<i>All school prawn sample results will be compared against these criteria</i>
PFHxS	0.065 mg/kg	
PFOA	0.52 mg/kg	
<b>FSANZ 2017 2-6 years Finfish (all species)</b>		
PFOS	0.0052 mg/kg	<i>All luderick and dusky flathead sample results will be compared against these criteria</i>
PFHxS	0.0052 mg/kg	
PFOA	0.041 mg/kg	

## 4.6 Data Quality Objectives and Data Validation

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2020).

Data validation assessment is provided in **Appendix D**.

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with DCMM requirements

## 5.0 Results

### 5.1 Conditions During Sampling

Sampling was conducted on 23 February 2022. Weather conditions observed during the February 2022 sampling event included:

- Temperature: 19.2 – 28.6°C.
- Rainfall: 25.2 millimetres (mm).
- Winds ranging between 9 and 39 kilometres per hour (km/hr).

The water quality parameters collected on 23 February 2022 are summarised in **Table 5**.

**Table 5 Water Quality Parameters**

Date	Dissolved Oxygen (mg/L)	Electrical Conductivity (mS/cm)	pH	Turbidity (NTU)	Temperature (°C)
23 February 2022	6.0	28.2	8.2	46.0	25.9

Note: Data presented is the average of the Water Quality Parameters measured at each sampling location

### 5.2 Number of Sampled Biota and Characteristics

The number of luderick (*G. tricuspidata*), dusky flathead (*P. fuscus*) and school prawn (*M. macleayi*) collected during the February 2022 biota sampling event are presented in **Table 6**.

Details of the live bycatch during this event were not recorded by DPI.

The average length and weight recorded for each species was as follows:

- 1.9 cm and 5.3 grams (g) for school prawns.
- 29.9 cm and 529.6 g for luderick.
- 46.1 cm and 662.6 g for dusky flathead.

**Table 6 Aquatic Biota Sampled**

Location ID	No. of School Prawn Samples	No. of Luderick Individuals	No. of Dusky Flathead Individuals
1	160	0	0
2	0	0	15
3	0	5	7
4	0	0	8
5	0	0	7
6	0	1	0
7	0	0	3

### 5.3 Analytical Results

The samples were analysed for the PFAS suite and are provided in **Table T1** in **Appendix B**.

A summary of the reported concentrations of PFOS and PFHxS in biota tissues are presented in **Table 7**.

Table 7 Summary of Aquatic Biota PFAS Analytical Concentrations

Analyte	Number of samples analysed	Number of detections	Minimum concentration (mg/kg)	Maximum concentration (mg/kg)
<b>Dusky Flathead (<i>Platycephalus fuscus</i>)</b>				
PFOS	4	4	0.012	0.014
PFHxS	4	0	<0.0005	<0.0005
<b>Luderick (<i>Girella tricuspidata</i>)</b>				
PFOS	4	4	0.0014	0.0046
PFHxS	4	0	<0.0005	<0.0005
<b>School Prawn (<i>Metapenaeus macleayi</i>)</b>				
PFOS	4	4	0.0053	0.0072
PFHxS	4	4	0.00058	0.00080

A summary of the PFAS concentrations detected in the tissue samples is as follows:

- PFOS was detected in all biota composite samples with concentrations ranging between 0.0014 mg/kg and 0.014 mg/kg
- the PFOS concentrations were above the FSANZ (2017) finfish trigger value of 0.0052 mg/kg (for children aged between two and six years) in the four dusky flathead composite samples analysed
- the PFOS concentrations were below the FSANZ (2017) finfish trigger value of 0.0052 mg/kg (for children aged between two and six years) in the four luderick composite samples analysed
- the PFOS concentrations were below the FSANZ (2017) crustacean trigger value of 0.065 mg/kg (for children aged between two and six years) in the four school prawn composite samples analysed
- in addition to PFOS, PFHxS was detected in the composite samples collected from the school prawn with concentrations ranging between 0.00058 and 0.0008 mg/kg
- concentrations of PFAS were reported within the historical range (2016 to 2021) for the respective sentinel species analysed.

No other PFAS were detected at concentrations above the laboratory LORs in the luderick and dusky flathead composite samples analysed.

## 6.0 Discussion

AECOM completed the biota sampling event in Fullerton Cove on 23 February 2022 to meet the requirements of the OMP Addendum (AECOM, 2019). The target species collected were the school prawn (*M. macleaya*); luderick (*G. tricuspidata*) and dusky flathead (*P. fuscus*).

A summary of the PFAS concentrations detected in the tissue samples was as follows:

- PFOS was detected in all biota composite samples with concentrations ranging between 0.0014 mg/kg and 0.014 mg/kg
- concentrations of PFOS in the dusky flathead composite samples analysed were above the FSANZ (2017) finfish trigger value of 0.0052 mg/kg (for children aged between two and six years). Concentrations of PFOS in remaining composite samples were below the FSANZ (2017) trigger values
- in addition to PFOS, PFHxS was detected in the composite samples collected from the school prawn with concentrations ranging between 0.00058 and 0.00080 mg/kg
- no other PFAS compounds were detected at concentrations above the laboratory LORs in the luderick and dusky flathead composite samples analysed
- concentrations of PFAS were reported within the historical range (2016 to 2021) for the respective sentinel species analysed. Biota results collected under the OMP (2020 to 2022) are presented in **Table T2 (Appendix B)**.

N22/006490

Internal standard recoveries are outside the acceptable range of 50-150% due to matrix interference for: 4:2 FTS

██████████ Analyst  
Australian Ultra Trace Laboratory

06-JUN-2022

All results are reported on a wet weight basis as received, and are corrected for labelled internal standard recoveries.

PFHxS and PFOS were quantified using combined branched and linear standards, for all PFAS linear and branched isomers in samples are totalled for reporting.

Results relate only to the sample(s) as received and tested.

Measurement Uncertainty is available upon request.

This Report shall not be reproduced except in full.

## SAMPLE RECEIVED CONDITION

Date samples received: 11-APR-2022

Sample received in good order: Yes

NMI Quotation no. provided:

Client purchase order number:

Temperature of samples: Frozen

Comments: Please provide order no for job AECO01/220411

Mode of Delivery: Courier

---

## Additional Terms and Conditions

Incomplete / unclear information about samples or required testing will delay the start of the analysis work

**If you require your Purchase Order (PO) number to be included on our invoice, please provide the number during sample submission and before the completion of work to avoid unnecessary delays and/or additional processing/handling fees.**

The lodgement of an order or receipt of samples for NMI services referenced in this Sample Receipt Notification constitutes an acceptance of the current version of NMI Terms and Conditions or other applicable Terms referenced in the NMI Quotation. NMI Terms and Conditions are available on the web at

<https://www.industry.gov.au/client-services/testing-and-analysis-services/chemical-and-biological-analysis-services-terms-and-conditions>

## Data Validation

LABORATORY DATA VALIDATION REPORT	
<b>Project number:</b>	60612562
<b>Client:</b>	Defence
<b>Site:</b>	Fullerton Cove
<b>Matrix type:</b>	Biota
<b>Primary Samples:</b>	12 Composite Biota Samples
<b>Laboratory:</b>	National Measurement Institute (NMI)
<b>Lab reference:</b>	AECO01_220411/ RN1354026
<b>Validation by:</b>	██████████
<b>Date:</b>	07/06/2022
<b>Data verified by:</b>	██████████
<b>Date:</b>	07/06/2022
<b>Project Manager:</b>	██████████
<b>Key Issues:</b>	No issues were identified that have the potential to impact upon the reliability of the Data. AECOM considers that the field procedures and laboratory QA/QC processes employed were appropriate for the purposes of the investigation.
Field Quality Assurance and Quality Controls	
Sampling personnel	Samples were collected by an AECOM subcontractor (NSW Department of Primary Industries (DPI), Port Stephens Fisheries Institute (Fisheries)).
Sampling Methodology	<p>Aquatic biota samples were captured utilising the following process:</p> <ul style="list-style-type: none"> <li>Boats were used to deploy mesh netting. Nets were placed in the target locations and collected within 3 hours for Luderick and Ducky Flathead. School prawns were captured using an otter trawl net.</li> <li>Target specimens were retrieved from the nets and euthanised by ice and water.</li> <li>Target specimens were placed in labelled plastic bags and transported to the Port Stephens Fisheries Institute on ice in an esky.</li> <li>Target specimen metrics (length, weight, bag number) were recorded at the Fisheries Institute by DPI.</li> </ul>
Chain of Custody	<p>All samples taken were reported on the Chain of Custody documents (COC) and analysed for requested analytes.</p> <p>Note: The original laboratory report RN1352415 was superseded by RN1354026, to include updated Field IDs.</p>
Rinsate Blank (RB)	No Rinsate Blanks were included with this batch given nets were used to catch samples.
Frequency of field QC	As per the SAQP, no duplicate samples were collected as the samples were being composited. Individual specimens of the composite samples were retained to validate composite results as required.
Handling and preservation	<p>It is noted that all biota samples were stored frozen before being submitted and shipped to the laboratory frozen, and in suitable conditions.</p> <p>All biota samples were received by NMI laboratories in appropriate containers.</p> <p>Sample homogenisation and preparation for analysis were undertaken in the laboratory.</p>

Calibration of equipment	Measurement of groundwater geochemical parameters was undertaken by NSW DPI. Calibration details have not been provided by NSW DPI.
<b>Laboratory Quality Assurance and Quality Controls</b>	
Tests requested/reported	All biota samples were analysed for the PFAS (25 analytes).
Holding time compliance	Samples were extracted and analysed within recommended holding times.
Laboratory	Aquatic Biota samples were analysed at the National Measurement Institute (NMI, Sydney), a NATA accredited laboratory (accreditation number 198).
Frequency of laboratory QC	The laboratory reported a sufficient frequency of quality control samples to assess whether the results have been reported to an acceptable accuracy and precision.
Method Blank (MB)	Method Blank concentrations were reported <LOR for all analytes tested. MB concentrations are presented in the laboratory Quality Assurance Report.
Laboratory Duplicate (LD) Relative Percent Difference (RPD)	Laboratory Duplicate Relative Percentage Differences were within the laboratory control limits. The LD RPDs are presented in the laboratory Quality Assurance Report.
Laboratory Control Spike (LCS) recovery	Laboratory Control Spikes recoveries were within the laboratory control limits. LCS recoveries are presented in the laboratory Quality Assurance Report.
Matrix Spike (MS) recovery	Matrix Spikes recoveries were within the laboratory control limits. MS recoveries are presented in the laboratory Quality Assurance Report.
Surrogate spike (SS) recovery	<p>Surrogate Spike recoveries were within the laboratory control limits (50-150%) with the exception of 4:2 FTS (154%) in sample 0908_BIOAFA061_220223 and 4:2 FTS (153%) in sample 0908_BIOAFA063_220223, due to matrix interference. SS recoveries are presented in the laboratory Quality Assurance Report.</p> <p>It is noted that these SS recoveries are only marginally outside of control limits and, furthermore, the SS recoveries for PFOS and PFHxS were within the acceptable range for the analysed samples, and as such the minor non-compliance is not considered to affect the interpretation of results.</p>
<b>Quality Assurance and Quality Controls Data Evaluation</b>	
Comparison of Esdat data and Laboratory Results	No anomalous results between Esdat output data and laboratory analysis results were noted.
Data transcription	A check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by AECOM.
Limits of reporting	Limits of Reporting (LORs) were sufficiently low to enable assessment against adopted human health screening levels and were consistent with Defence (2018) <i>Guidance Document E Standard PFAS Analytical Suite</i> requirements.
<b>Comments</b>	
The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

## 1.0 Introduction

### 1.1 General

AECOM Australia Pty Ltd (AECOM) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan at the RAAF Base Williamtown (the 'Site') and the Williamtown Management Area in the NSW & JBT Region. The location of the Site and Management Area is shown in **Figure F1** in **Appendix A**.

The OMP (AECOM, 2019) outlines the sampling requirements for the Site and off-Site areas within the Management Area.

Following each sampling event, factual sampling event reports will be prepared. Annual interpretive reports will be prepared following the completion of each 12-month sampling period.

This Sampling Event Factual Report has been prepared to report the results of the May 2022 annual sampling event, specifically highlighting first time detections and/or new exceedances of human health or ecological screening criteria for PFOS+PFHxS, PFOS and/or PFOA.

This report has been prepared in accordance with the Defence *PFAS OMP Factual Report Guidance (Version 0.2)* issued in May 2021 (Defence, 2021).

### 1.2 Objectives

The objectives were to:

- Implement the OMP (AECOM, 2019) prepared as part of the Detailed Environmental Investigations; and
- Collect data that will enable Defence to maintain an up to date understanding of the distribution, concentration, transport, and transformation of PFAS.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PFAS Management Area Plan (PMAP) (Defence, 2019).

The objective of this phase of works was to implement the scope of works for the May 2022 annual sampling event in accordance with the Sampling and Analysis Quality Plan (SAQP) (AECOM, 2022).

## 2.0 Scope of Work

The scope of works was completed generally in accordance with the SAQP (AECOM, 2022), as follows:

- obtain permission (where required) to conduct works at the Site, off-site publicly accessible areas and commercial properties, and at private properties
- gauging of groundwater level in monitoring wells prior to collection of samples
- groundwater sampling and collection of water quality parameters at 130 monitoring wells and bores (refer to **Table 1** below and **Figures F2-1 to F2-4** in **Appendix A** for specific locations), noting that samples from 27 locations could not be collected during this sampling event (refer to **Table 10** for further details)
- surface water sampling and collection of water quality parameters at 20 locations (refer to **Table 2** below and **Figure F3** in **Appendix A** for specific locations), noting that samples from 3 locations could not be collected during this sampling event (refer to **Table 10** for further details)
- sediment sampling at 23 locations (refer to **Table 3** below and **Figure F4** in **Appendix A** for specific locations), noting that samples from 3 sediment locations could not be collected during this sampling event (refer to **Table 10** for further details)
- soil sampling at 12 locations (refer to **Table 4** below and **Figure F5** in **Appendix A** for specific locations)
- collection of field duplicate samples at a rate of 1 in 10 primary samples
- analysis of samples for PFAS suite at the standard limit of reporting (LOR)
- data management of the OMP field and laboratory data in Defence ESdat database
- preparation of this factual monitoring event report.

Note: due to privacy considerations, selected monitoring locations are unable to be shown on the figures in **Appendix A**.

**Table 1** Groundwater Sampling Locations

Area	Description	Sampling Location	Total
On-Site	<b>Former &amp; Current Fire Station</b> (Facility 165)	MW196, MW198, MW200, MW201S, MW201D, MW202S, MW202D	7
	<b>Disused Fire Training Pit</b> (Facility 479)	MW166, MW167, MW168, MW169S, MW169D	5

Note: Soil samples were collected from the designated flood areas outlined in the OMP (AECOM, 2019)

### 3.0 Deviations from the SAQP

The May 2022 annual sampling event was completed in general accordance with the SAQP (AECOM, 2022) with the exception of the deviations outlined in **Table 5** below.

**Table 5** Deviations from SAQP (AECOM, 2022)

SAQP	May 2022 annual Sampling Event
<p>157 groundwater locations are identified to be sampled as part of the annual sampling event</p>	<p>During the May 2022 sampling event, 27 of the 157 scheduled groundwater locations were unable to be gauged and/or sampled.</p> <p>Monitoring wells MW103S, MW103D, MW107S and MW107D, located to the west of the Site, were in flooded areas and could not be sampled. Given that nearby monitoring wells MW280S, MW135S/MW135D and MW241S/MW241D were able to be gauged and sampled, the lack of sampling data from these locations is not considered to present a significant data gap.</p> <p>Monitoring well MW120, located to the east of the Site, was covered by a stockpile of road base and could not be accessed. The lack of sampling data from MW120 presents a potential data gap in monitoring the eastern flank of PFAS plume, however nearby wells MW121 and MW279S, which were able to be sampled, provide coverage to the east and south of MW120.</p> <p>Monitoring wells MW125S, MW125D, MW146S, MW188D, MW229S, MW229D, MW278S and MW278D located to the south of the Site, were either buried beneath stockpiles of soil associated with the Cabbage Tree Road upgrade works (MW125S, MW125D and MW188D), could not be located or accessed in areas of overgrown vegetation (MW146S, MW229S and MW229D), or could not be accessed due to flooding in the area (MW278S and MW278D). The lack of sampling data from MW146S, MW188D, MW278S and MW278D is not considered to present a significant data gap as nearby monitoring wells MW146AD, MW147S, MW147D, MW188S, MW126S/MW126D and MW230S were able to be sampled and provide sufficient coverage of this area. The lack of sampling data from MW125S, MW125D, MW229S and MW229 presents a potential data gap in monitoring the southwestern extent of the western plume.</p> <p>Monitoring wells MW177, MW226S and MW226D, located to the south of the Site, could not be located or accessed in areas of overgrown vegetation and not sampled. Given that nearby monitoring wells MW184S/MW184D, MW104S/MW104D, MW731S and MW188S were able to be sampled, the lack of sampling data from these locations were not considered to be a significant data gap.</p> <p>Monitoring well MW130 was located in a flooded area and could not be sampled. Given that paired monitoring well MW130D and nearby monitoring wells MW159S and MW159D were able to be sampled, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>Monitoring well MW155 in the northern portion of the Site was covered by pipes associated with construction works and could not be sampled. Given that nearby monitoring wells MW406, MW245S and MW245D were able to be sampled, the lack of sampling data from this location is not considered to be a significant data gap.</p>

SAQP	May 2022 annual Sampling Event
	<p>Access to sample monitoring well locations MW235D, MW235S, MW267D and MW267S, located on private properties to the south of the Site were declined by the property owner and therefore were not sampled. Given that nearby monitoring wells MW233S/MW233D, MW268S and down hydraulic gradient wells MW270S/S270D were able to be sampled, the lack of sampling data from these locations were not considered to be a significant data gap.</p> <p>Monitoring wells MW266S and MW266D, located to the south of the Site, were located in a flooded area and could not be sampled. Given that monitoring wells MW233S/MW233D, MW147S/MW147D and MW270S/MW270D were able to be sampled, the lack of sampling data from these locations is not considered to be a significant data gap.</p> <p>Monitoring well MW252S, located to the east of the Site, was unable to be accessed due to localised flooding. Given that nearby monitoring wells and residential bores MW123, POT087 and POT089 were able to be accessed and sampled, the lack of sampling data at this location is not considered to present a significant data gap.</p> <p>Monitoring well MW814, located in the northern portion of the Site, was within a flooded area and could not be sampled. Given that nearby monitoring wells MW317S/MW317D and MW134I/MW134D were able to be sampled, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>Monitoring well MW826, located to the east of the Site, could not be located and was therefore not be sampled. Given that nearby monitoring wells MW132S/MW132D, MW160 and MW829 were able to be sampled, the lack of sampling data from this location is not considered to be a significant data gap.</p>
<p>23 surface water locations are identified to be sampled as part of the annual sampling event</p>	<p>During the May 2022 sampling event, three of the 23 scheduled surface water locations were unable to be sampled.</p> <p>Surface water sample location SW011 was located in a flooded area and could not be sampled. Given that surface water samples were able to be collected downstream of this location at SW014 and SW005, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>No surface water samples were collected at location SW072 as the private property owner declined access to their property. Given that a surface water sample was able to be collected upstream of this location at SW062, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>No surface water sample was collected at location SW082 as the private property owner declined access to their property. Given that surface water samples were able to be collected upstream of this location within Ten Foot Drain at SW081, the lack of sampling data from this location is not considered to be a significant data gap.</p>
<p>26 sediment locations are identified to be sampled as part of the annual sampling event</p>	<p>During the May 2022 sampling event, three of the 26 scheduled sediment locations were unable to be sampled.</p> <p>Sediment sample location SD011 was located in a flooded area and could not be sampled. Given that sediment samples were able to be</p>

SAQP	May 2022 annual Sampling Event
	<p>collected downstream of this location at SD014 and SD005, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>No surface water samples were collected at location SD072 as the private property owner declined access to their property. Given that a sediment sample was able to be collected upstream of this location at SD062, the lack of sampling data from this location is not considered to be a significant data gap.</p> <p>No sediment sample was collected at location SD082 as the private property owner declined access to their property. Given that surface water samples were able to be collected upstream of this location within Ten Foot Drain at SD081, the lack of sampling data from this location is not considered to be a significant data gap.</p>
<p>Groundwater samples will be collected from monitoring wells using no-purge methodology with HydraSleeves™</p>	<p>Due to the absence or failed deployment of the HydraSleeve™ in monitoring wells MW108S, MW109D, MW126, MW171S, MW209S, MW245S, MW280S and MW829, samples were collected using dedicated disposable bailers. The change in sampling methodology is not considered to impact the reliability of the data given that the concentrations of PFAS reported during this round were within the same order of magnitude of previous results.</p> <p>Due to the narrow PVC of monitoring wells MW842 and MW844, no HydraSleeve™ was able to be installed, and a grab sample was collected using a peristaltic pump with dedicated sample tubing. Note that this sampling methodology has been previously used at these locations under the OMP scope of works, and that the SAQP will need to be updated to reflect the need for a specific sampling methodology for these two locations.</p>

## 4.0 Methodology

### 4.1 Sampling Methodology

The methodology used for the May 2022 annual sampling event was in accordance with the SAQP (AECOM, 2022) and is summarised in **Table 6** below.

**Table 6 Sampling Methodology**

Item	Details
Groundwater gauging	<p>The depth to groundwater was measured in each monitoring well immediately prior to collection of groundwater samples using an interface probe.</p> <p>In addition, a targeted gauging round was completed of 33 selected monitoring wells to generate data for the groundwater elevation contours and assess groundwater flow direction. The targeted gauging round was completed on 1 June 2022 and 2 June 2022.</p>
Field parameters	<p>Temperature, electrical conductivity (EC), dissolved oxygen (DO), oxidation-reduction potential (ORP), pH and observations of water quality were recorded for groundwater and surface water samples.</p> <p>Field parameters were collected using a calibrated water quality meter (WQM). The equipment supplier and field calibration records are provided in <b>Appendix C</b>.</p>
Sampling methodology	<p><b>Groundwater Monitoring Wells</b></p> <p>The majority of groundwater samples were collected from each monitoring well using HydraSleeves™, a no-purge sampling methodology.</p> <p>HydraSleeves™ were installed within the screened interval of the wells for a minimum of 24 hours prior to the sampling round, based on a review of the well construction log. For this event, all the HydraSleeves™ were installed during previous sampling rounds in May 2021 and November 2021.</p> <p>Once sampling was completed, new HydraSleeves™ were deployed in each of the monitoring wells, within the screened interval depth in preparation for the next sampling round.</p> <p>At locations where the HydraSleeves™ failed to deploy, or had been removed prior to the sampling event, AECOM collected groundwater samples using dedicated, disposable bailers. At locations MW842 and MW844, groundwater samples were collected using a peristaltic pump with dedicate sample tubing, given that the diameter of the well casing was too small to accommodate a HydraSleeve™ or disposable bailer.</p> <p><b>Residential Bores</b></p> <p>Bore water samples were collected by placing a laboratory provided sample bottle beneath the tap outlet to collect the “first flush” of water.</p> <p><b>Surface Water</b></p> <p>Surface water samples were collected from immediately below the water surface (approximately 10 centimetres [cm] below the surface water level, where depth permitted) to minimise collection of sediment, surface film or floating materials in the samples.</p> <p>At each location, a new, laboratory supplied container was lowered into the water (either by hand or using a sampling pole) with the cap immediately applied once the container was full.</p> <p><b>Sediment</b></p>

Item	Details
	<p>Sediment samples representative of potentially deposited sediments were collected from within the water body, using a hand trowel to a maximum depth of 0.3 metres below ground level (mbgl). A new laboratory supplied container was used at each location for collection of samples.</p> <p><b>Soil</b></p> <p>Soil samples were collected using a hand trowel to a maximum depth of 0.1 mbgl. A new laboratory supplied container was used at each location for collection of samples.</p>
QA/QC Samples	<p>A QA/QC program was implemented for the sampling and analysis program in order to obtain representative data and assess the reliability of the data obtained.</p> <p>To facilitate the QA/QC program the following sample types were obtained during the sampling program:</p> <ul style="list-style-type: none"> <li>• <i>Intra-laboratory duplicates</i> collected at a rate of 1 in 10 primary samples. The relative percentage difference (RPD) should be less than 30%, or less than 50% if results are less than 20 times the limit of reporting (LOR). Higher RPDs may also be acceptable if results are less than 10 times the LOR.</li> <li>• <i>Inter-laboratory duplicates</i> collected at a rate of 1 in 10 primary samples. The relative percentage difference (RPD) should be less than 30%, or less than 50% if results are less than 20 times the limit of reporting (LOR). Higher RPDs may also be acceptable if results are less than 10 times the LOR.</li> <li>• <i>Rinsate blanks</i> collected at a frequency of one per set of sampling equipment per day where equipment was reused between locations. Analytical results should be below the laboratory limit of reporting (LOR).</li> </ul> <p>For this May 2022 annual sampling event, the QA/QC samples included:</p> <ul style="list-style-type: none"> <li>• 22 x intra-laboratory duplicates (16 groundwater, 3 surface water, 2 sediment and 1 soil), which met the target frequency</li> <li>• 21 x inter-laboratory duplicates, (16 groundwater, 2 surface water, 2 sediment and 1 soil) which met the target frequency</li> <li>• 17 x rinsate blanks, which met the target frequency</li> </ul> <p>The data validation assessment is presented in <b>Appendix D</b>.</p>
Sample analysis	<p>Samples were submitted to the primary and secondary laboratories for PFAS suite at the standard limit of reporting (LOR).</p> <p>ALS Environmental (ALS) Sydney, NSW was used as the primary laboratory. Envirolab Services (Envirolab) Sydney, NSW was used as the secondary laboratory. ALS and Envirolab methods for analyses were certified by the National Association of Testing Authorities (NATA).</p> <p>A summary of the laboratory results is presented in <b>Section 5.3</b> and the laboratory certificates are presented in <b>Appendix E</b>.</p>

## 4.2 Adopted Screening Criteria

Adopted screening criteria references the PFAS National Environmental Management Plan, Defence estate and environmental strategies, and Defence PFAS-specific strategies and guidance. Guidance documents used to assess the data set include the following:

- Heads of Environmental Protection Agencies (HEPA), 2020. PFAS National Environmental Management Plan (NEMP) Version 2.0. January 2020 (HEPA 2020).

- Department of Health (DoH), 2017. Health Based Guidance Values for PFAS for use in site investigations in Australia. April 2017 (FSANZ 2017).
- National Health and Medical Research Council (NHMRC), 2019. Guidance on PFAS in Recreational Water. August 2019 (NHMRC 2019).
- National Environment Protection Council (NEPC), 2013. National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (NEPC 2013).

The adopted PFAS screening criteria to assess the data generated as part of the OMP are presented in

**Table 7** and **Table 8** below.

**Table 7 Summary of Adopted Screening Criteria: Water**

Pathway	Compound	Criteria	Comment/Reference
<b>Human Health Receptors</b>			
Drinking water – groundwater and surface water	PFOS + PFHxS	0.07 µg/L	The values presented in the PFAS NEMP (2020) are from the DoH (2017), which published final health-based guidance values for PFAS for use in site investigations in Australia. DoH utilised the Tolerable Daily Intake (TDI) for PFOS and PFOA from Food Standards Australia New Zealand (FSANZ) (2017) and the methodology described in Chapter 6.3.3 of the National Health and Medical Research Council's (NHMRC) of the Australian Drinking Water Guidelines (ADWG) (2022) to determine drinking water values.
	PFOA	0.56 µg/L	For PFHxS, DoH (2017) noted that ' <i>FSANZ concluded that there was not enough toxicological and epidemiological information to justify establishing a tolerable daily intake. However, as a precaution, and for the purposes of site investigations, the PFOS tolerable daily intake should apply to PFHxS. In practice, this means that the level of PFHxS exposure should be added to the level of PFOS exposure; and this combined level be compared to the tolerable daily intake for PFOS.</i> '  <i>All surface water and groundwater results were compared to these criteria.</i>
Recreational use – surface water	PFOS + PFHxS	2 µg/L	In August 2019, NHMRC released guidance on the assessment of PFAS in surface water. Rather than adopting an ingestion rate of 0.2 L of water per day (as per the ADWG formula), NHMRC adjusted this rate with consideration of an event frequency (150 events/year) to calculate an annual ingestion rate of 30 L per year. These values were adopted by the HEPA NEMP 2.0 (2020).  <i>All surface water results were compared to these criteria.</i>
	PFOA	10 µg/L	
<b>Ecological Receptors</b>			
Freshwater	PFOS	0.00023 µg/L	The values are from the PFAS NEMP (2020) which endorsed the Australian and New Zealand Guidelines for Fresh and Marine Water Quality.  The 99% species protection level (for freshwater and interim marine) has been applied for high value

	PFOA	19 µg/	<p>conservation systems. This approach is generally adopted for chemicals that bioaccumulate and biomagnify in wildlife. It is proposed that the laboratory LOR is adopted for the purposes of preliminary screening of analytical water results, rather than sole use of the criteria value.</p> <p><i>All groundwater and surface water results were compared to these criteria.</i></p>
--	------	--------	--

Table 8 Summary of Adopted Screening Criteria: Soil

Media	Pathway	Compound	Criteria	Comment/Reference
<b>Human Receptors</b>				
Soil	Public Open Space	PFOS + PFHxS	1 mg/kg	<p>The values presented in the PFAS NEMP (2020) are based on 20% of FSANZ TDI, i.e. up to 80% of exposure is assumed to come from other pathways.</p> <p>The assumptions utilised in the derivation of the criteria in terms of exposure are adopted from the NEPM (2013) Health Investigation Level D. The values make several assumptions including 8 hrs spent indoors and 1 hr spent outdoors at a site such as a shop, office, factory or industrial site.</p> <p>The PFAS NEMP (2020) notes these soil guidance values should only be used to assess potential human exposure through direct soil contact, with simultaneous investigation of other factors including leaching, off-Site transport, bioaccumulation and secondary exposure. Further, the degree of conservatism in the soil criteria means that exceeding these values does not necessarily indicate an unacceptable risk to human health, provided other exposure pathways are controlled.</p> <p><i>The off-site soil results were compared to the most relevant exposure scenario (Public Open Space for soil samples collected from flood areas).</i></p>
		PFOA	10 mg/kg	
<b>Ecological Receptors</b>				
Soil	Interim soil ecological - indirect exposure (All land uses)	PFOS	0.01 mg/kg	<p>The values are presented in the NEMP (2020) which published interim guidance values for ecological receptors, for use in Site investigations. The values were adopted from Canadian Federal Environmental Quality Guidelines (2017) for Commercial and Industrial use (coarse soil). The values are assumed to protect against potential impacts on freshwater life from PFOS originating from soil that may enter surface water and groundwater.</p> <p>The values are considered for interim use noting further research is required to review and amend (if necessary) these values for Australian conditions.</p> <p><i>All soil results collected from off-site open space areas (soil samples collected from flood areas) were compared against the direct and indirect screening criteria.</i></p>
		PFOA	-	
	Interim soil ecological – direct exposure (All land uses)	PFOS	1 mg/kg	
		PFOA	10 mg/kg	

### 4.3 Data Quality Objectives and Data Validation

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022). Data validation assessment is provided in **Appendix D**.

Data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

Following the reporting of PFAS concentrations which were outside historical ranges at a number of locations (MW128D, MW139, MW146AD, MW230S, MW245D, MW842, MW844, SS107), the primary laboratory was requested to repeat the analysis to confirm the reported concentrations. Further details are provided in **Appendix D**.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements.

## 5.0 Field Observations and Results

### 5.1 General Observations

The weather conditions and general observations (including activities that may impact the monitoring program) recorded during the May 2022 annual sampling event completed between 16 May 2022 and 02 June 2022 are summarised in **Table 9** below.

**Table 9** General Observations

Items	Observations
Weather Conditions	<p>During the sampling event, the weather was observed to be variable, with maximum daily temperatures between 14.4°C (20 May) and 23.4°C (16 May).</p> <p>A cumulative 72 mm of rainfall was recorded at Williamtown (Williamtown RAAF, 61078) (Bureau of Meteorology, 2022) during the sampling event, with the majority of the rainfall recorded between 21 and 25 May 2022.</p> <p>It is noted that above average rainfall had been experienced consistently at Williamtown in the four months preceding the monitoring event in May 2022 (with more than three times the monthly average recorded in March 2022).</p> <p>As a result, significant standing water was observed in low lying areas at the Site and surrounds which impacted access to a number of sampling locations.</p>
Estate Management Works, Training Activities and/or Construction Works.	<p>During the May 2022 sampling event, construction activities in the vicinity of MW155 in the northern portion of the Site prevented access to this location.</p> <p>Several monitoring wells (MW125S, MW125D, and MW188D) located along Cabbage Tree Road to the south of the Site could not be accessed or sampled due to road widening construction activities being undertaken in this area.</p>

### 5.2 Field Observations and Measurements

The observations and measurements recorded during the field activities for the May 2022 annual sampling event are summarised in **Table 10**, below.

**Table 10** Field Observations and Measurements

Item	Description
Access and Sample Collection	All sample locations were accessible or were able to be sampled with the exception of those identified in <b>Table 5</b> .

Item	Description
Monitoring Well Network Condition	<p>All wells sampled were observed to be in good condition with the exception of the following:</p> <ul style="list-style-type: none"> <li>• MW156D, MW188S, MW198, MW208 and MW238S: these monitoring wells were observed to have damaged or missing gatic lids. AECOM will attempt to repair and/or replace these gatics ahead of the next scheduled sampling event</li> <li>• MW230S, MW258D and MW263D: these monitoring wells were observed to have water within the gatic covers either above or below the top of PVC casing</li> <li>• MW120, MW125D, MW125S: condition unable to be assessed as the wells was buried beneath stockpiled material</li> <li>• MW256S and MW260D: both wells had missing gatic cover bolts which were replaced by the field team during the sampling event.</li> </ul>
Water Contamination Observations	<p>No visible signs of contamination in groundwater or surface water were observed at the locations sampled.</p>
Depth to Groundwater and Flow Direction	<p>Depth to groundwater ranged from 0.000 (MW130D, MW158S/D, MW195, MW230S, MW231D, MW264D, MW280S) and 2.460 (MW210S/D) metres below top of casing (mbTOC). Groundwater elevation ranged between -0.051 (MW128S) and 9.347 (MW264D) metres Australian Height Datum (mAHD). Groundwater gauging data is presented in <b>Table T1</b> in <b>Appendix B</b>.</p> <p>The inferred groundwater flow direction is to the south and south east towards Tilligerry Creek and Fourteen Foot Drain, and to the south of Tilligerry Creek, Fourteen Foot Drain and Ten Foot Drain, groundwater is inferred to be flowing to the north-northeast (refer to <b>Figure F6-1</b> and <b>F6-2</b> in <b>Appendix A</b>) which was generally consistent with previous flow directions.</p>

Item	Description
Geochemical Parameters	<p>Groundwater and surface water geochemical parameters were measured during the collection of water samples. The readings are presented in <b>Table T2</b> and <b>Table T3</b> in <b>Appendix B</b> and are summarised below:</p> <p><b>Groundwater Geochemical Parameters</b></p> <ul style="list-style-type: none"> <li>• Dissolved oxygen ranged from 0.04 mg/L (MW281S) to 10.7 mg/L (MW104S) indicating poor to well oxygenated conditions.</li> <li>• Electrical conductivity ranged from 29.7 µS/cm (MW247S) to 35,940 µS/cm (MW147D) indicating fresh to saline conditions.</li> <li>• pH ranged from 3.59 (MW282S) to 7.55 (POT382) indicating moderately acidic to neutral conditions.</li> <li>• Redox ranged from -224.6 mV (MW231D) to 521 mV (POT085) indicating oxidising to reducing conditions.</li> </ul> <p><b>Surface Water Geochemical Parameters</b></p> <ul style="list-style-type: none"> <li>• Dissolved oxygen ranged from 2.3 mg/L (MW245D, SW047) to 8.21 mg/L (SW048) indicating generally well oxygenated conditions.</li> <li>• Electrical conductivity ranged from 23.4 µS/cm (SW048) to 1,107 µS/cm (SW079) indicating fresh to saline conditions.</li> <li>• pH ranged from 5.15 (POT046, SW048) to 7.15 (SW110) indicating slightly acidic to neutral conditions.</li> <li>• Redox ranged from -6.9 mV (SW055) to 153.8 mV (SW108) indicating oxidising to reducing conditions.</li> </ul>
Soil and Sediment Observations	<p>Soil and sediment sampled and logged during this monitoring event comprised sand, silt and clay materials with minor inclusions of gravels and trace shell fragments, and varying amounts of organic material (roots, leaves, grass).</p> <p>No anthropogenic inclusions or staining was observed. Organic odour was noted in samples collected from seven locations.</p> <p>Refer to in <b>Table T4</b> in <b>Appendix B</b> for a summary of soil and sediment classifications and observations.</p>

## 5.3 Summary of Analytical Results

### 5.3.1 Groundwater Analytical Results

The PFAS groundwater analytical results from this sampling event are presented in **Table T5** in **Appendix B**. In summary, 130 primary groundwater samples were analysed for PFAS compounds, with concentrations of:

- PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 83 primary samples
- PFOS+PFHxS and/or PFOA exceeded the adopted human health screening criteria in 55 primary samples
- PFOS and/or PFOA exceeded the adopted ecological screening criteria in 69 primary samples.

Deviations from the historical dataset are reported in **Table 11** and graphically on **Figure F7** in **Appendix A**.

Table 11 Deviations from Historical Dataset: Groundwater

Deviation Type	Groundwater sampling location	Sum of PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		May 2022	Previous maximum	May 2022	Previous maximum	May 2022	Previous maximum
First time detections of PFOS+PFHxS PFOS and/or PFOA in groundwater	MW128D	0.01	<LOR	There was no first-time detection in the dataset.		0.01	<LOR
	MW146AD	0.28	<LOR	There was no first-time detection in the dataset.		0.27	<LOR
	MW147S	There were no first-time detections in the dataset.		0.01	<LOR	There were no first-time detections in the dataset.	
	MW230S	0.01	<LOR	There was no first-time detection in the dataset.		There was no first-time detection in the dataset.	
	MW245D	0.01	<LOR	There was no first-time detection in the dataset.		There was no first-time detection in the dataset.	
	MW264S	0.02	<LOR	There was no first-time detection in the dataset.		0.02	<LOR

	POT089	There were no first-time detections in the dataset.		0.01	<LOR	There were no first-time detections in the dataset.	
New exceedance of the NEMP (HEPA, 2020) drinking water guidelines in groundwater	MW146AD	0.28	<LOR	There were no new exceedances of the NEMP Human Health Screening Criteria in the dataset.		There are no applicable NEMP Human Health Screening Criteria.	
	MW247D	0.08	0.06	There were no new exceedances of the NEMP Human Health Screening Criteria in the dataset.		There are no applicable NEMP Human Health Screening Criteria.	
New exceedance of the NEMP (HEPA, 2020) Freshwater 99% guidelines in groundwater	MW128D	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		0.01	<LOR
	MW146AD	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		0.27	<LOR
	MW264S	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological		0.02	<LOR

Deviation Type	Groundwater sampling location	Sum of PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		May 2022	Previous maximum	May 2022	Previous maximum	May 2022	Previous maximum
				Screening Criteria in the dataset (99%).			
	MW270S	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		0.01	<LOR
	MW842	There are no applicable NEMP Ecological Screening Criteria (99%).		There were no new exceedances of the NEMP Ecological Screening Criteria in the dataset (99%).		0.02	<LOR
<b>Legend</b>							
Blue Shading	Blue shading indicates sampling location with first time detection of PFOS+PFHxS, PFOS and/or PFOA						
Yellow Shading	Yellow shading indicates sampling location with new exceedance of NEMP Human Health and/or Ecological Screening criteria						

### 5.3.2 Surface Water Analytical Results

The PFAS surface water analytical results from this sampling event are presented in **Table T6** in **Appendix B**. In summary, 20 primary surface water samples were analysed for PFAS compounds, with concentrations of:

- PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 19 primary samples
- PFOS+PFHxS and/or PFOA exceeded the adopted drinking water human health screening criteria in 19 primary samples
- PFOS+PFHxS and/or PFOA exceeded the adopted recreational use human health screening criteria in nine primary samples
- PFOS and/or PFOA exceeded the adopted ecological screening criteria in 19 primary samples.

There were no first-time detections, or new exceedances of the adopted human health or ecological screening criteria for PFOS+PFHxS, PFOS and/or PFOA, in the surface water samples analysed.

### 5.3.3 Sediment Analytical Results

The PFAS sediment analytical results from this sampling event are presented in **Table T7** in **Appendix B**. In summary, 23 primary sediment samples were analysed for PFAS compounds, with concentrations of PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 23 primary samples.

There were no first-time detections for PFOS+PFHxS, PFOS and/or PFOA, in the sediment samples analysed.

### 5.3.4 Soil Analytical Results

The PFAS soil analytical results from this sampling event are presented in **Table T8** in **Appendix B**. In summary, 12 primary soil samples were analysed for PFAS compounds, with concentrations of:

- PFOS+PFHxS, PFOS and/or PFOA reported above laboratory LOR in 12 primary samples
- PFOS+PFHxS and/or PFOA did not exceed the adopted human health screening criteria in any primary samples
- PFOS and/or PFOA exceeded the adopted ecological screening criteria in 3 primary samples.

Deviations from the historical dataset are reported in **Table 12** and graphically on **Figure F8** in **Appendix A**.

**Table 12** Deviations from Historical Dataset: Soil

Deviation Type	Soil sampling location	Sum of PFOS+PFHxS (mg/kg)		PFOA (mg/kg)		PFOS (mg/kg)	
		May 2022	Previous maximum	May 2022	Previous maximum	May 2022	Previous maximum
First time detections of PFOS+PFHxS PFOS and/or PFOA in soil	-	There was no first-time detection in the dataset.		There was no first-time detection in the dataset.		There was no first-time detection in the dataset.	
New exceedance of the NEMP (HEPA, 2020) Human Health Screening Criteria in soil	-	There were no first-time exceedances of the NEMP Human Health Screening Criteria in the dataset.		There were no first-time exceedances of the NEMP Human Health Screening Criteria in the dataset.		There are no applicable NEMP Human Health Screening Criteria.	
New exceedance of the NEMP (HEPA, 2020) Ecological Screening Criteria in soil	SS107	There are no applicable NEMP Ecological Screening Criteria.		There were no first-time exceedances of the NEMP Ecological Screening Criteria in the dataset.		0.0299	0.0078
<b>Legend</b>							
Blue Shading	Blue shading indicates sampling location with first time detection of PFOS+PFHxS, PFOS and/or PFOA						
Yellow Shading	Yellow shading indicates sampling location with new exceedance of NEMP Human Health and/or Ecological Screening criteria						

## 5.4 Historical Sampling Data

Historical groundwater, surface water, sediment and soil sampling data are presented in **Tables T9, T10, T11** and **T12** (respectively) in **Appendix B**.

## 6.0 Summary and Next Sampling Events

### 6.1 Summary of Monitoring Event

The May 2022 annual sampling event was completed between 16 May 2022 and 02 June 2022. The findings and the recommended actions are summarised in **Table 13** below.

**Table 13 Summary of Sampling Event**

Item	Comment	Recommended Action
Access to sampling locations	<p>The following were accessed and able to be sampled:</p> <ul style="list-style-type: none"> <li>• 130 groundwater locations</li> <li>• 20 surface water locations</li> <li>• 23 sediment locations</li> <li>• 12 soil locations</li> </ul>	Nil.
Location unable to be located, inaccessible or dry	<p>Groundwater samples from six monitoring wells (MW103S, MW103D, MW107S, MW107D, MW130 and SW252S) and one co-located surface water / sediment location (SW011 / SD011) were not collected as the location or access to the locations was flooded.</p>	<p>AECOM will continue to monitor these sampling locations during the next scheduled sampling event (November 2022).</p>
	<p>Groundwater samples from eight monitoring wells (MW120, MW177, MW226S, MW226D, MW266S, MW266D, MW814 and MW826) were not collected as they could not be accessed and/or located.</p>	<p>AECOM recommends the removal of these eight locations from the OMP scope of works as they have not been able to be sampled over successive sampling events and, in some cases, since 2018-2019. These locations are either lost, destroyed or unable to be accessed in the long term.</p> <p>The existing monitoring well network provides adequate coverage for these wells.</p> <p>AECOM recommends replacing MW120 with nearby existing monitoring wells MW150S and MW150D, if they are still operational.</p>
	<p>Groundwater samples from nine monitoring locations (MW125S, MW125D, MW146S, MW155, MW188D, MW229S, MW229D, MW278S and MW278D) to the south of the Site could not be located or sampled due to overgrown vegetation, flooded access and/or construction activities.</p>	<p>AECOM will continue to monitor these sampling locations during the next scheduled sampling event.</p>

Item	Comment	Recommended Action
	Groundwater samples from four groundwater monitoring locations (MW235D, MW235S, MW267D and MW267S) and two co-located surface water / sediment locations (SW072 / SD072 and SW082 / SD082) located on private properties could not be sampled as the property owners did not provide consent to access the properties.	<p>Two property owners have permanently opted out for the OMP program, as such AECOM will no longer have access to MW235D, MW235S, MW267D, MW267S, SW072/SD072 and SW082/SD082.</p> <p>These monitoring wells are outside of the current inferred plume footprint and the current well network provides sufficient coverage for the southerly extent.</p> <p>AECOM proposes to replace SW072/SD072 with a new co-located surface water / sediment location in the vicinity of MW147S/MW147D, downstream of the original location.</p>
Monitoring well network condition	All monitoring wells that were able to be accessed were noted to be in good condition, with the exception of some with damaged or missing gatic lids and some with water in gatics, with the water either above or below TOC.	AECOM will attempt to replace gatic lids were damaged or missing during the next scheduled sampling event.
Analytical Results	130 groundwater primary samples, 20 surface water primary samples, 23 sediment primary samples and 12 soil primary samples were analysed.	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.
First time detections of PFOS+PFHxS, PFOS and/or PFOA	<p>10 monitoring wells / bores out of the 130 sampled (MW128D, MW146AD, MW147S, MW230S, MW245D, MW264S, MW264S, MW270S, MW842 and POT089) reported first time detections of PFOS+PFHxS and/or PFOA.</p> <p>No surface water, sediment or soil locations sampled reported first time detections of PFOS+PFHxS, PFOA and/or PFOS.</p>	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.

Item	Comment	Recommended Action
New exceedance of adopted human health screening criteria	<p>2 monitoring wells out of the 130 sampled (MW146AD, MW247D) reported new exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA.</p> <p>No surface water locations reported new exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA.</p> <p>No sediment locations reported new exceedances of the adopted human health screening criteria for PFOS+PFHxS and/or PFOA.</p>	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.
New exceedance of adopted ecological screening criteria	<p>5 monitoring wells out of the 130 sampled (MW128D, MW146AD, MW264S, MW270S, MW842) reported new exceedances of the adopted ecological screening criteria for PFOS and/or PFOA.</p> <p>No surface water locations reported new exceedances of the adopted ecological screening criteria for PFOS and/or PFOA.</p> <p>1 soil location out of the 12 sampled (SS107) reported new exceedances of the adopted ecological screening criteria for PFOS and/or PFOA.</p>	Locations will be sampled again during the next scheduled sampling event to continue to monitor concentrations over time.

## 6.2 Upcoming Sampling Events

The next OMP sampling event is scheduled for November 2022.

## 6.3 Upcoming Annual Interpretive Report

The next annual interpretive report is scheduled to be delivered in Q3 2022.

**Notes**  
 LOR Limit of Reporting  
 Normal Primary sample  
 Field\_D Intra-laboratory duplicate sample  
 Interlab\_D Inter-laboratory duplicate sample  
 Denotes first time detection above LOR  
 Denotes new exceedence of human health and/or ecological screening criteria

## Calibration Certificates

**Certificate of Service and Calibration**  
**Interface Meter**  
**Heron H.Oil**

<b>Company Name</b>	WAM Scientific
<b>Office Address</b>	26 Bungarra Crescent, Chipping Norton NSW 2170
<b>Phone Number</b>	+61 405 241 484
<b>Contact Name</b>	[REDACTED]
<b>Instrument</b>	Heron H.Oil Interface Meter (30m)
<b>Serial Number</b>	01-8023
<b>Client Name</b>	[REDACTED] (AECOM Australia Pty Ltd)
<b>Project Number</b>	60612562 Task 1.2

Instrument Check			
Item	Test	Test Passed	Comments
9V Battery	Klein Tools MM300 Multimeter	✓	Battery voltage reading above 7.9V
Battery Box	Check	✓	No damage
Face and Back Plates	Check	✓	No damage
Thumb Screws	Check	✓	Rubber ends intact
Tape Hangar/Protector	Check	✓	No damage
On/Off Button	Operation	✓	Button is functional
Buzzer	Operation	✓	Intermittent tone in H <sub>2</sub> O, solid tone in product
LED Signal Light	Operation	✓	LED light functional – green and red
Probe	Operation/Check	✓	Decontaminated, cleaned and tested
Tape	Condition/Check	✓	Decontaminated and cleaned, no damage
Connection	Check	✓	Probe and link connected correctly and tightly
PCB	Operation	✓	Unit is fully functional
Electronics Panel	Orientation	✓	Correctly aligned

Instrument Readings		
Product	Buzzer	LED Light
H <sub>2</sub> O	Intermittent	Blinking – Red
Petroleum	Solid	Steady – Red

Declaration
<b>WAM Scientific</b> certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The interface meter was decontaminated, cleaned and tested with a mixture of tap water and petrol, shielded from ambient light.

<b>Checked By</b>	[REDACTED]
<b>Calibration Date</b>	11/05/2022
<b>Calibration Due</b>	11/11/2022

**Peristaltic Pump  
Geotech Geopump 2**

<b>Company Name</b>	WAM Scientific
<b>Office Address</b>	26 Bungarra Crescent, Chipping Norton NSW 2170
<b>Phone Number</b>	+61 405 241 484
<b>Contact Name</b>	[REDACTED]
<b>Instrument</b>	Geotech Geopump Peristaltic Pump
<b>Cable Length</b>	4.5m
<b>Serial Number</b>	Pump: 6231
<b>Serial Number</b>	Head: -
<b>Client Name</b>	[REDACTED] (AECOM Australia Pty Ltd)
<b>Project Number</b>	60612562 Task 2.1

<b>Instrument Check</b>			
Item	Test	Test Passed	Comments
2 x 12V Batteries	Klein Tools MM300 Multimeter	✓	Both batteries reading above 12V
Battery Terminals	Check	✓	No damage
Charger	Condition/Check	✓	Functioning
Cabling	Check	✓	No damage
Alligator Clips	Check	✓	Protected, no damage
Casing	Check	✓	Clean, no damage
Handle	Check	✓	No damage
Pump Head	Check	✓	EZ2 Head, no damage
Pump Condition	Decontamination	✓	Decontaminated
Pump Operation	Operation	✓	Peristaltic pump functional
Pump Tubing	Replacement	✓	New 0.5m ¼" OD LDPE silicon tubing
Pump Speed	Operation	✓	Speed knob functional

<b>Inclusions</b>
2 x Sealed lead acid 12V batteries included 1x Carry case for 12V batteries included 1x Intrinsically safe charger (clips) included

<b>Declaration</b>
<b>WAM Scientific</b> certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The pump has been decontaminated and cleaned upon return from the previous hire and is in good working order.

**Instrument Check**

Item	Test	Test Passed	Comments
2 x Alkaline C-size Batteries	Klein Tools MM300 Multimeter	✓	Both batteries reading above 2.9V
Battery Saver Function	Operation	✓	Automatically turns off after 60 minutes if idle
Unit Display	Operation	✓	Screen visible, no damage
Keypad	Operation	✓	Responsive, no damage
Connection Port and Cable	Condition/Check	✓	Clean, no damage
Monitor Housing	Condition/Check	✓	No damage
Firmware	Version	✓	4.0.0
pH Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
pH millivolts for pH 7.00	Calibration	✓	pH 7.00 calibration range between 0 mV ± 50 mV
pH millivolts for pH 4.00	Calibration	✓	pH 4 mV range +165 to +180 from 7 buffer mV value
pH slope	Calibration	✓	Range between 55 to 60 mV/pH (ideal value 59 mV)
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
ORP Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
ORP Reading	Calibration	✓	Within ± 80 mV of reference Zobell Reading
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
Conductivity/Temp Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
Conductivity Cell	Calibration	✓	Conductivity cell constant 5.0 ± 1.0 in GLP file
Clean Sensor Readings	Calibration	✓	Clean sensor reads less than 3 uS/cm in dry air
Dissolved Oxygen Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
DO Cap	Condition/Calibration	✓	1.25 mil PE membrane (yellow membrane)
DO Sensor in Use	Condition	✓	Polarographic DO sensor
DO Sensor Value	Calibration	✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA

**Instrument Readings**

Parameter	Standard Used	Reference No.	Calibration Value	Observed	Actual	Units
Temperature	Centre 370 Thermometer	Room Temp.	16.9	16.8	16.9	°C
pH	pH 4.00	351750	4.01	3.82	4.01	pH
pH	pH 7.00	351621	7.00	7.16	7.00	pH
Conductivity	2760 µS/cm at 25°C	362912	2760	3143	2760	µS/cm
ORP (Ref. check only)	Zobell A & B	364644/363903	242.7	240.5	242.7	mV
Zero Dissolved O <sub>2</sub>	NaSO <sub>3</sub> in Distilled H <sub>2</sub> O	362832	0.0	4.5	0.0	%
100% Dissolved O <sub>2</sub>	100% Air Saturated H <sub>2</sub> O	Fresh Air	100.0	113.0	100.0	%

**Declaration**

**WAM Scientific** certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The calibration data supplied was obtained in accordance with manufacturer's specifications using solutions of known values.

FQM - Water Quality Meter Calibration Record

Q4AN(EV)-410-FM1

Project Name:	PFAS OMP	Project Number:	60612 <del>562</del> 562
Project Location:	Williamstown	Client:	Defence
PM Name:		Fieldwork Staff Name:	

This calibration record is intended to prompt fieldwork staff to calibrate water quality meter (WQM) daily before the start of fieldworks.

INSTRUMENT DETAILS

Supplier:	WAM scientific
Make and Model:	YSI Pro Plus
Serial Number:	20D102896

## Analytical Data Validation

DATA VALIDATION	
<b>Project number:</b>	60612562
<b>Client:</b>	Defence
<b>Site:</b>	RAAF Base Williamtown
<b>Matrix type:</b>	Soil, Sediment, Surface water and Groundwater
<b>Primary Samples:</b>	12 soil, 23 sediment, 20 surface water and 130 groundwater
<b>Laboratory:</b>	ALS (Primary) and Envirolab (Secondary)
<b>Lab reference:</b>	ES2217533, ES2217534, ES2217535, ES2217536, ES2217537, ES2217538, ES2217539, ES2217540, ES2217541, ES2217542, ES2217543, ES2217544, ES2217545, ES2217546, ES2217547, ES2217548, ES2219407, ES2219408, ES2219409, ES2219411, ES2219412, ES2219413, 297361
<b>Validation by:</b>	██████████
<b>Date:</b>	26/08/2022
<b>Data verified by:</b>	██████████
<b>Date:</b>	01/09/2022
<b>Project Manager:</b>	██████████
<b>Key Issues:</b>	No significant issues were identified that have the potential to impact upon the reliability of the data or have a material implication to decision-making on the project. AECOM considers that the field and laboratory QA/QC procedures were appropriate for the purposes of the investigation.
Field Quality Assurance and Quality Controls	
Field DQOs and DQIs	The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (AECOM, 2022).
Sampling personnel	Sampling was conducted by ██████████ ██████████ ██████████ ██████████ and ██████████ between the 16/05/2022 and 02/06/2022 (14 days total). Field personnel were suitably qualified and experienced AECOM environmental scientists and engineers.
Sampling Methodology	All water and soil samples were collected in accordance with the SAQP (AECOM, 2022), except for samples MW108S, MW109D, MW126S, MW171S, MW209S, MW245S and MW280S which were collected using bailers instead of Hydrasleeves™. The Hydrasleeves™ at these locations had either been removed or did not deploy properly.  After each sample was collected, re-usable equipment was decontaminated using Liquinox and the consumables (nitrile gloves, HydraSleeves™ materials and/or bailers) were disposed of in waste bins.
Chain of Custody	All samples taken were reported on the Chain of Custody documents (COC) and subsequent email amendments and analysed for requested analytes.
Rinsate Blank (RB)	Rinsate blank samples were collected at a frequency of 1 per day of sampling where equipment was re-used and decontaminated between sample points. Rinsate blank samples were either collected from the final rinse of the interface probe or sampling trowel following decontamination using laboratory supplied de-ionised water.

DATA VALIDATION	
Frequency of field QC	<p>Field duplicates (intra-laboratory duplicates) and triplicates (inter-laboratory duplicates) were collected at a frequency of 1 in 10 primary samples (10%). In total:</p> <ul style="list-style-type: none"> <li>• 19 water field duplicates (12.7%) and 18 water field triplicates were collected (12%) for 150 primary water samples;</li> <li>• 3 soil field duplicate and 3 soil field triplicates were collected (8.6%) for 35 primary soil samples;</li> </ul> <p>Overall, the number of field duplicates and triplicates collected meet the DQI requirements.</p>
Handling and preservation	<p>All samples were placed in a chilled cooler between immediately after sampling until handed to the laboratory. Samples were received preserved and chilled at the primary and secondary laboratory, with all containers received within the recommended temperature range (<math>4 \pm 2^{\circ}\text{C}</math>).</p>
Calibration of equipment	<p>Measurement of groundwater geochemical parameters was undertaken using YSI Professional Plus water quality meter, which was calibrated by the supplier prior to use, in accordance with the manufacturer's instructions and bump tested daily by the field personnel.</p> <p>Measurement of depth to groundwater was undertaken using an interface probe, which was serviced by the supplier prior to use.</p> <p>All equipment calibration and service certificates are presented in <b>Appendix C</b>.</p>
Laboratory Quality Assurance and Quality Controls	
Tests requested/reported	<p>All samples were analysed for the per- and polyfluoroalkyl substances (PFAS) extended suite.</p>
Holding time compliance	<p>Samples were extracted and analysed within recommended holding times.</p>
Laboratory	<p>Laboratory analysis was undertaken by National Association of Testing Authorities (NATA) accredited laboratories: ALS Environmental Pty Ltd (Sydney) (Accreditation No. 825), and Envirolab Services Pty Ltd (Envirolab, Sydney) (Accreditation number 2901).</p>

**DATA VALIDATION**

Frequency of laboratory QC	<p>The laboratory reported a sufficient frequency of quality control samples to assess whether the results had been reported to an acceptable accuracy and precision, except for the following:</p> <ul style="list-style-type: none"> <li>• 19 of the 23 laboratory certificates did not have required Laboratory Duplicates (DUP) for Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS, with 15 not conducting any and 4 reporting less than the expected rate of 10%.</li> <li>• 18 of the 23 laboratory certificates did not have required Matrix Spikes (MS) for Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS, with 17 not conducting any and 1 reporting less than the expected rate of 5%.</li> </ul> <p>Furthermore, one laboratory certificate reported a quality control frequency outlier in the Laboratory Duplicate (DUP) Moisture Content with an actual result of 8.33%, falling short of the expected 10%.</p> <p>Overall, the laboratory QC frequency is adequate to assess the data for useability.</p>
Method Blank (MB)	<p>All method blank concentrations were reported below the LOR for the analytes tested. This is presented in the laboratory Quality Control Report for both laboratories.</p>
Laboratory Duplicate (LD) Relative Percent Difference (RPD)	<p>The reported laboratory duplicate RPDs were within laboratories control limits. The laboratory duplicate RPDs are presented in the laboratory Quality Control Report for both laboratories.</p>
Laboratory Control Spike (LCS) recovery	<p>The reported laboratory Control Spikes (LCS) recoveries were within the laboratories control limits. This is presented in the laboratory Quality Control Report for both laboratories.</p>
Matrix Spike (MS) recovery	<p>The reported laboratory Matrix spike (MS) recoveries were within the laboratories control limits. This is presented in the laboratory Quality Control Report for both laboratories.</p>
Surrogate spike (SS) recovery	<p>The reported laboratory Surrogate Spikes (SS) recoveries were within the laboratories control limits. This is presented in the laboratory Quality Control Report for both laboratories.</p>

**Quality Assurance and Quality Controls Data Evaluation**

Comparison of Esdat data and laboratory results	<p>No anomalous results between Esdat output data and laboratory analytical results were noted.</p>
Anomalous data / Repeat Analysis	<p>Following the reporting of PFAS concentrations which were outside historical ranges at a number of locations (MW128D, MW139, MW146AD, MW230S, MW245D, MW842, MW844, SS107), the primary laboratory was requested to repeat the analysis to confirm the reported concentrations. The repeat analysis confirmed the originally reported concentrations in all but two locations (MW139 and MW844).</p> <p>Where re-analysis of the samples confirmed the initial reported result, the original result has been adopted for reporting purposes. For samples MW139 and MW844, the re-analysis results were adopted for reporting purposes given that they were consistent with historical data.</p>

DATA VALIDATION	
Data transcription	The laboratory results within the electronic data, the laboratory reports, and tables generated by AECOM were checked, with no anomalies identified.
Limits of reporting	With the exception of the PFAS NEMP Freshwater 99% species protection (HEPA 2020) values for PFOS, the laboratory LORs were sufficiently low to enable assessment against adopted guideline criteria.
Rinsate Blank Sample Results	The results of the rinsate blank sample analysis indicated that concentrations of PFAS were below the laboratory limits of reporting (LORs) for all analytes tested, indicating that the decontamination procedures were adequate.
Field duplicate and RPDs	<p>The duplicate RPDs were within laboratory control limits stated in the SAQP (AECOM, 2022), except for a number of PFAS compounds across soil and water samples in batches ES2217534 and ES2219407, where RPDs ranged from 31% to 180%.</p> <p>The elevated RPDs in two of the duplicate pairs are not considered significant due to the non-homogenous nature of the materials.</p> <p>The RPDs outside the 30% acceptable range in the water samples can be considered acceptable as the results were either less than 10 times the LOR (no limit for RPD acceptable range) or less than 20 times the LOR (and the RPD is less than 50%).</p>
Field triplicate RPDs	<p>The triplicate RPDs were within laboratory control limits stated in the SAQP (AECOM, 2022), except for a number of PFAS compounds across soil and water samples in batches ES2217534, ES2219408, ES2217533 and ES2219407, where RPDs ranged from 32% to 133%.</p> <p>The elevated RPDs in the soil samples are not considered significant due to the non-homogenous nature of the materials.</p> <p>The RPDs outside the 30% acceptable range in the water samples can be considered acceptable as the results are less than 10 times the LOR (no limit for RPD acceptable range) or are less than 20 times the LOR (and the RPD is less than 50%).</p>
Comments	
The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the sample locations and that the overall quality of the analytical data produced is acceptably reliable for the purpose of this report.

**Notes**  
 LOR = Limit of Reporting  
 µg/L = micrograms per Liter  
 nc = non calculable as concentrations in one or both samples are below the LOR  
 RPDs have only been considered where a concentration is greater than 1 times the LOR  
 High RPDs (>30%) are highlighted in bold

**Notes**  
 LOR = Limit of Reporting  
 µg/L = micrograms per Liter  
 nc = non calculable as concentrations in one or both samples are below the LOR  
 RPDs have only been considered where a concentration is greater than 1 times the LOR  
 High RPDs (>30%) are highlighted in bold

**Notes**  
 LOR = Limit of Reporting  
 mg/kg = milligrams per kilogram  
 nc = non calculable as concentrations in one or both samples are below the LOR  
 RPDs have only been considered where a concentration is greater than 1 times the LOR  
 High RPDs (>30%) are highlighted in bold

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

--	---

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
<span style="background-color: black; color: black;">[REDACTED]</span>	Organic Chemist	Sydney Organics, Smithfield, NSW
	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (04/07/2022): This report has been amended and re-released to allow the reporting of additional analytical data, specifically method EP231X for sample 002.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Amendment	: 1		
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 02-Jun-2022
Site	: WLM-R	Issue Date	: 04-Jul-2022
Sampler	: [REDACTED]	No. of samples received	: 2
Order number	: 60612562_2.1	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Laboratory Control outliers occur.
- **NO** Matrix Spike outliers occur.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## QUALITY CONTROL REPORT

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Organic Chemist	Sydney Organics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
RPD = Relative Percentage Difference  
# = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2219412	Page	: 1 of 5
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 02-Jun-2022
Site	: WLM-R	Issue Date	: 10-Jun-2022
Sampler	: [REDACTED]	No. of samples received	: 4
Order number	: 60612562_2.1	No. of samples analysed	: 4

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL** Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Analytical Methods</b>

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

<span style="background-color: black; color: black;">[REDACTED]</span>	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **WATER**

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## QA/QC Compliance Assessment to assist with Quality Review

Work Order	: ES2219411	Page	: 1 of 4
Client	: AECOM AUSTRALIA PTY LTD	Laboratory	: Environmental Division Sydney
Contact	: [REDACTED]	Telephone	: +61 2 8784 8555
Project	: NSW_0908_PFASOMP	Date Samples Received	: 02-Jun-2022
Site	: WLM-R	Issue Date	: 09-Jun-2022
Sampler	: [REDACTED]	No. of samples received	: 1
Order number	: 60612562_2.1	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

### Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type Method	Count		Rate (%)		Quality Control Specification
	QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
<b>Matrix Spikes (MS)</b>					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0	19	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
RPD = Relative Percentage Difference  
# = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

<i>Signatories</i>	<i>Position</i>	<i>Accreditation Category</i>
[REDACTED]	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
Preparation Methods	Method	Matrix	Method Descriptions
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

## QUALITY CONTROL REPORT

---	--

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category

<span style="background-color: black; color: black;">[REDACTED]</span>	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

## Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: SOIL

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: SOIL

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

## Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

## Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

[REDACTED]	LCMS Coordinator	Sydney Organics, Smithfield, NSW

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
∅ = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

## Analytical Results

Project	: NSW_0908_PFASOMP	Date Samples Received	: 02-Jun-2022
Site	: WLM_SS_2	Issue Date	: 10-Jun-2022
Sampler	: [REDACTED] [REDACTED]	No. of samples received	: 1
Order number	: 60612562_2.1	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

#### Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

#### Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

## Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: \* = Holding time breach ; ✓ = Within holding time.

Method Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

## Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

Quality Control Sample Type	Method	Count		Rate (%)			Quality Control Specification
		QC	Regular	Actual	Expected	Evaluation	
<b>Laboratory Duplicates (DUP)</b>							
Moisture Content	EA055	1	8	12.50	10.00	✔	NEPM 2013 B3 & ALS QC Standard
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	20	10.00	10.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Laboratory Control Samples (LCS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	20	5.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard
<b>Method Blanks (MB)</b>

<b>Matrix Spikes (MS)</b>							
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	20	5.00	5.00	✔	NEPM 2013 B3 & ALS QC Standard

## Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

<i>Analytical Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.
<i>Preparation Methods</i>	<i>Method</i>	<i>Matrix</i>	<i>Method Descriptions</i>
QuEChERS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

## General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key :  
 Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

## Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: SOIL				Laboratory Duplicate (DUP) Report					
Laboratory sample ID	Sample ID	Method: Compound	CAS Number	LOR	Unit	Original Result	Duplicate Result	RPD (%)	Acceptable RPD (%)
<b>EA055: Moisture Content (Dried @ 105-110°C) (QC Lot: 4384432)</b>
